

Press Release

FOR IMMEDIATE RELEASE

ILSI Introduces I630 Quick Delivery Configurable VCXO

ILSI, a leading supplier of frequency control products, expands its frequency control offering with the release of the I630 series. The I630 series is a miniature configurable 5.0 x 7.0 mm LVPECL/LVDS VCXO that offers low jitter performance of <1 ps RMS typical in the 12 kHz to 20 MHz bandwidth.

LVPECL/LVDS VCXO's are available 10 MHz to 1500 MHz and the LVC MOS frequency range is 10 MHz to 225 MHz. Available frequency stabilities include ± 20 ppm over a temperature range of 0°C to +70 C and ± 25 ppm -40°C to +85°C. Both 2.5V and 3.3V supply voltage options are available. A data sheet is available at <http://ilsiamerica.com/products/details/VCXO/SMD/I630>.

Applications include fiber channel, server and storage, wireless repeaters, transponders, HDTV, FPGAs, data acquisition, military communications, SONET/SDH/DEWM/ATM, Ethernet, digital network switching, microprocessors / SDP / FPGA, test equipment and industrial controllers.

To view a complete list of ILSI's products and downloadable datasheets, please visit ILSI's Website (www.ilsiamerica.com). For more information, please contact sales by Telephone at 775-851-8880 or email at e-mail@ilsiamerica.com.

ILSI America is a leading supplier of Frequency Control Products - quartz crystals, XOs (clock oscillators), TCXOs (temperature compensated oscillators), VCXOs (voltage controlled crystal oscillators), and TCVCXOs (temperature compensated voltage controlled oscillators).
