# **MORNSUN®**

50W isolation DC-DC converter with ultra-wide , ultra-high 150-1500V DC input for Renewable Energy

#### **FEATURES**

- Ultra-wide input voltage range of 150 1500VDC
- Operating ambient temperature range: -25° ~ +65°
- High I/O isolation test voltage of 4000VAC
- High efficiency, low ripple & noise
- High reliability, long service life
- Input reverse polarity and under-voltage protection, output short circuit, over-current and over-voltage protection
- Operating up to 5000m altitude

PV50-29D 1505-20 is a regulated DC-DC converter with an ultra-wide and ultra-high DC input of 150-1500VDC, which design to meet standards of CSA-C22.2 No. 107.1, EN62109. The products feature high efficiency, high reliability, high insulation and a high level of safety protection. This type of power supply is widely used in renewable energy industries such SVG, photovoltaic power generation and high-voltage DC conversions. The converters provide multiple protection features and guarantee stable and safe operating environments even under abnormal working conditions. For extremely harsh EMC environment, we recommend using the application circuit show in Design Reference of this datasheet.

## **Product Characteristic Curve**

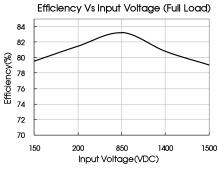

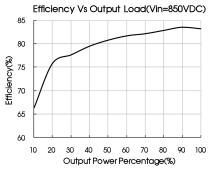

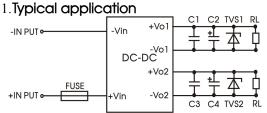

#### Note:

- ① With a DC input between 150-280VDC/1400-1500VDC, the output power must be derated as per temperature derating curves;
- ② For operation of this converter series in an altitude between 2000 5000m above sea level, the output power must be derated as per the altitude derating curve:
- ③ The electolytic capacitors have a constant lifetime, the service life depends on the actual ambient temperature, operating in harsh environments can affect the life of a product, shorten the service life of the product, it's not recommended that the product work in high temperature environment above 65°C for a long time.
- (4) This product is suitable for applications using natural air cooling; for applications in closed environment please consult factory or one of our FAE.

Fig. 1: Typical application circuit

Note on filter components:

We recommend using an electrolytic capacitor with high frequency and low ESR rating for C2, C4 (refer to manufacture's datasheet). Choose a capacitor voltage rating with at least 20% margin, in other words not exceeding 80%. C1, C3 are a 1uF ceramic capacitor, used to filter high-frequency noise. TVS is a recommended suppressor diode to protect the application in case of a converter failure.

General tolerances: ±1.0[±0.039]

#### Note:

- 1. For additional information on Product Packaging please refer to <a href="www.mornsun-power.com">www.mornsun-power.com</a>. Packaging bag number: 58220080;
- Unless otherwise specified, parameters in this datasheet were measured under the conditions of Ta=25°C, humidity<75% with nominal input voltage and rated output load;
- 3. All index testing methods in this datasheet are based on our company corporate standards;
- In order to improve the efficiency, there will be audible noise generated when working at input voltage higher than 1000VDC, but it does not affect product performance and reliability;
- 5. We can provide product customization service, please contact our technicians directly for specific information;
- Products are related to laws and regulations: see "Features" and "EMC";
- 7. Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units.
