

Power Semiconductor Product Guide 2019

Industry-Leading
High-Power IGBT Modules

World-Class
High-Efficiency Bipolar Range

Dynex Semiconductor has a rich history in the design, development and production of High Power Semiconductors and Power Assemblies.

Throughout the years, our products have been applied in projects that vary from Traction, Power Quality through HVDC, Renewable Energy production to helping science advance.

IGBT Modules

Superior Power Cycling with the latest generation IGBT die

The Dynex manufacturing plant is a vertically integrated facility with device design, wafer fab, packaging, qualification and testing available on site.

The acclaimed DIM (IGBT High-Power Modules) are robust and work with high reliability at any temperature condition from -40/-50°C up to +150°C.

Great emphasis is placed on low inductance power bus bar designs so the module can cope with fast switching transients such as, those of next generation trench gate IGBT's and SiC MOSFET.

KEY FEATURES

- ☉ High DC stability via advanced edge termination design and passivation
- ☉ High short circuit capability-wide SCSOA
- ☉ Self-limiting short circuit current
- ☉ Low switching losses
- ☉ Class-leading robustness
 $T(vj\ op) = 150^{\circ}\text{C}$
- ☉ AlSiC Baseplate for increased thermal cycling capability
- ☉ Package design with CTI > 600
- ☉ Isolated base plate
- ☉ 500A to 3600A at 750V to 6500V

APPLICATIONS

- ☉ High Reliability Inverters
- ☉ Motor Controllers
- ☉ Traction Drives
- ☉ Different circuit topologies (half bridge, single switch, chopper)

750V IGBT Modules

Part Number	Configuration	Production Status	I _C (A)	at T _C (°C)	V _{CE(sat)} @ T _C =25°C (V)	Total E _{sw} @ T _C =150°C (mJ)	R _{th(j-c)} (per switch) (°C/kW)	Baseplate Dims (mm)	Isolation Voltage	Tech

Straightforward flexibility for new and existing designs

The Dynex Press-pack IGBT range is based on a flexible, scalable design. Making it straightforward to produce devices with a variety of contact diameters, current ratings and IGBT: FRD chip ratios. Dynex's chip design and in-house fabrication capabilities make it possible to tune chipsets to specific applications. Dynex Press-pack IGBT devices are now available at a variety of power levels; up to 2100A at 4500V. Making Dynex the ideal partner for both new and existing designs.

Product Features

- Novel housing solution using a typical hermetically-sealed hockey puck ceramic housing with internal compliance mechanism ensures optimum contact pressure distribution across all chips with standard thyristor heatsink and clamp assemblies and prevents over pressurisation of chips
- Chip assemblies employ silver sintering technology for improved robustness and improved thermal characteristics
- New chipset designed and manufactured by Dynex in the UK.

Press-pack IGBTs for HVDC and FACTS

The popularity of insulated gate bipolar transistors (IGBTs) for use in high-voltage direct current (HVDC) transmission and flexible AC transmission systems (FACTS) is increasing. Unfortunately, for these applications, wire-bond IGBT technology has a number of shortcomings such as; insufficient current ratings for the most powerful schemes, and inability to fail to short-circuit. Press-pack IGBT technology, conversely offers increased current ratings and an inherent short-circuit failure mode making it a more attractive choice for HVDC and FACTS.

Custom IGBT Modules

Enhancing our range of power semiconductor devices, Dynex Semiconductor Ltd has the capability to design, develop and manufacture custom IGBT modules.

Applications for power electronics devices often involve harsh operating conditions or environments necessitating devices capable of meeting these requirements.

Dynex semiconductor utilises our vast experience in the manufacture of power semiconductors to design and produce high reliability IGBT modules customised to meet the individual demands for end applications including those in the aerospace, automotive, medical, renewable energy and traction markets.

Dynex capabilities can encompass the following:

- Laser welded assemblies
- Ultrasonic Welding processes
- Copper Wire bonds
- Various die technologies (Trench gate, SiC)
- Liquid cooled heatsinks
- Customised busbar arrangements
- Silver Sintering
- Customised packaging (case materials)
- Hermetic sealed packages

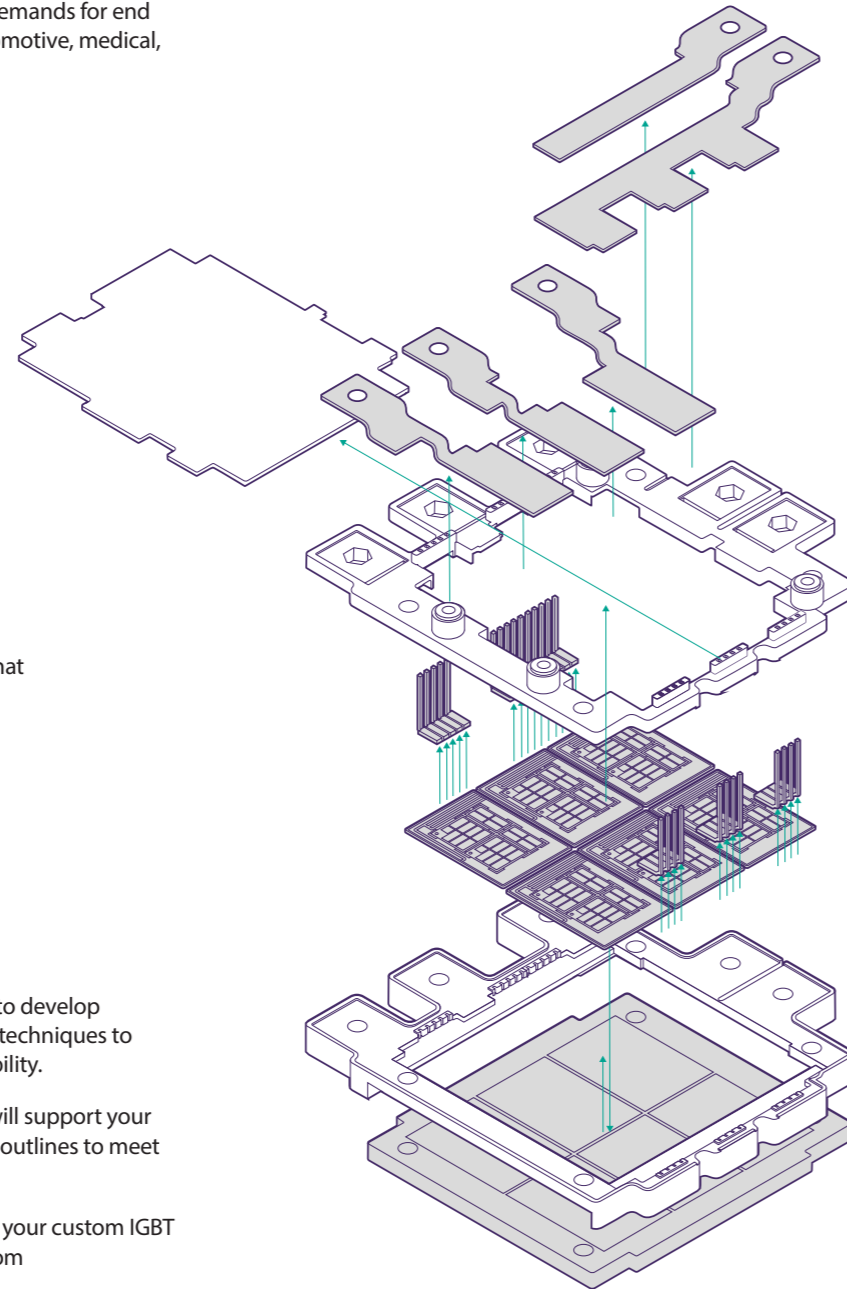

Using our experience in design of IGBT modules, Dynex has designed and manufactured modules that have helped our customers:

- Reduce system cost
- Reduce total system size and weight
- Improve thermal characteristics
- Maximise system efficiency
- Operate in severe environments

Using our in-house design team, Dynex continues to develop our own processes and designs to utilise the latest techniques to improve cooling, current output, lifetime and reliability.

Through initial concept to full production, Dynex will support your requirements to provide enhanced, reliable device outlines to meet your stringent demands.

For more information on how Dynex can help with your custom IGBT needs, please email powersolutions@dynexsemi.com

DESIGN TOOL

Easy selection of the Dynex device most applicable to the application

Our online tool is designed to assist you in choosing the right Dynex semiconductors, using the integrated digital datasheet you can analyse our components' properties and performance at your specific operating point which may differ from the nominal conditions in the datasheet.

This extended database is also used to simulate the electrical and thermal behaviour of our components in all typical power electronic topologies, that can be adjusted to meet the requirements of your specific application.

Simulations can be conducted for both grid and motor applications and the type of the reactive power generated can be set to inductive or capacitive with toggle switches. The affect of the third harmonic injection can be analysed using another toggle switch provided.

The instantaneous and average power losses in each semiconductor component of the circuit are displayed for each topology selected along with other outputs shown below.

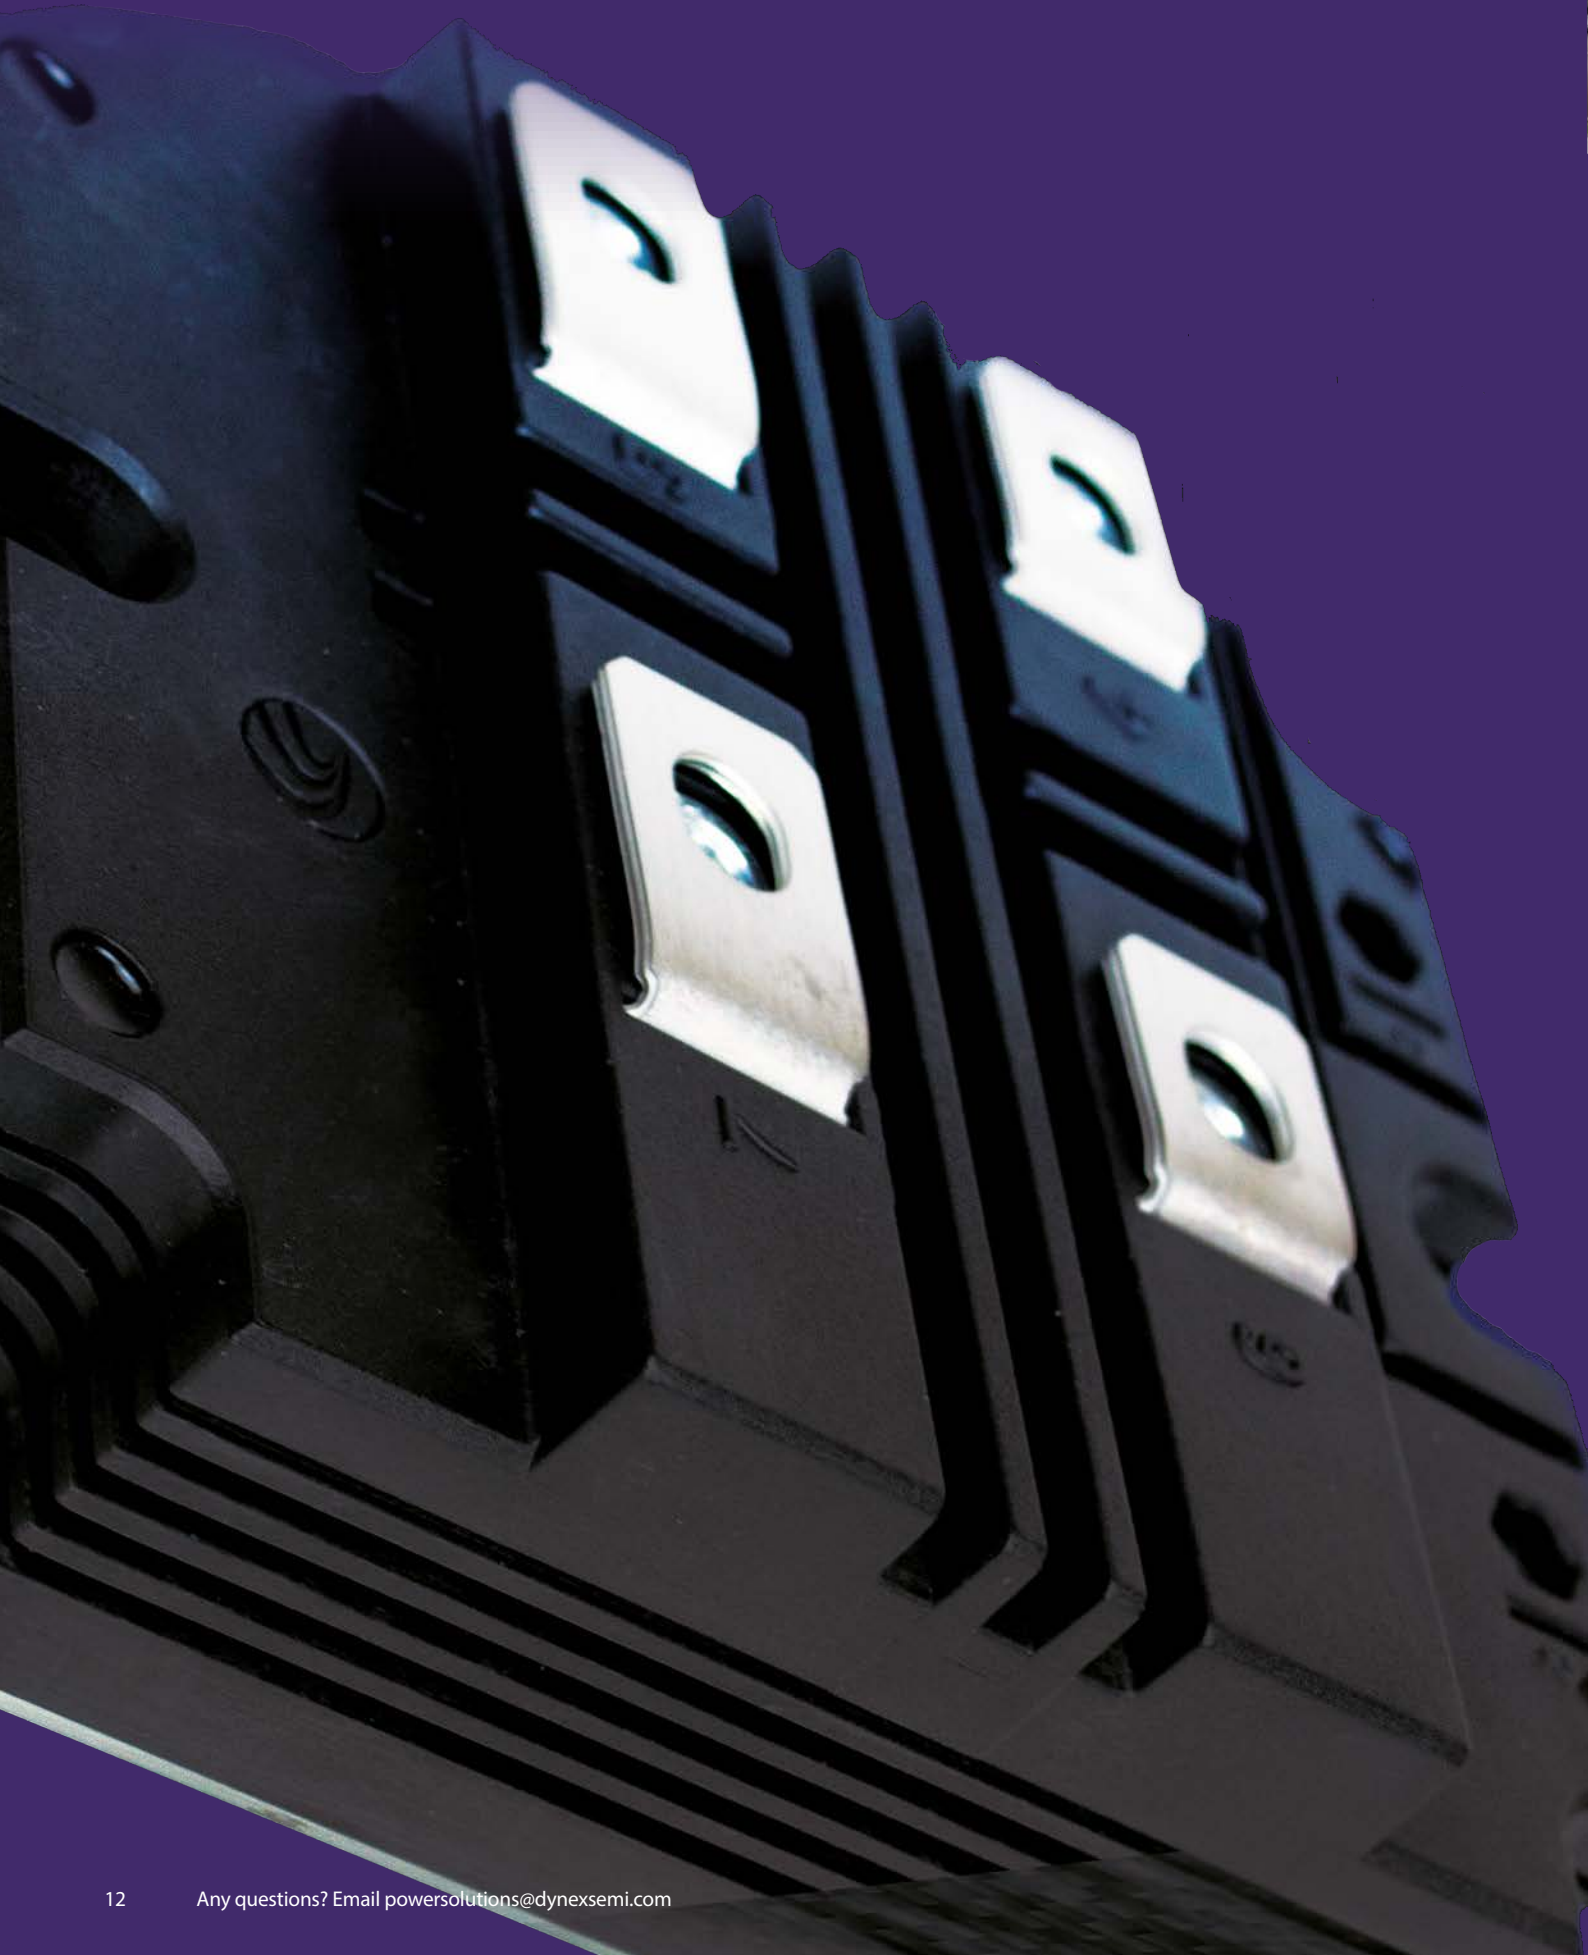

- Converter Output & Grid Voltage
- Alternating Current & Grid Voltage
- Current in Phase 1
- Conduction Losses in Phase 1
- Switching Losses in Phase 1

FRD Modules

Regulate electricity flow to ensure higher reliability and increased efficiency

Dynex's FRD modules regulate electricity flow to ensure higher reliability and increased efficiency in motor drives and other variable speed processes.

The family of high-voltage fast recovery diode (FRD) modules has been designed for use in rail traction, industrial motor drives, induction heating and power generation.

The FRD modules are designed to match and work as the input rectifiers for the existing Dynex range of IGBT modules.

Fast switching times and low reverse recovery losses allow high frequency operation making the device suitable for the latest drive designs employing PWM and high frequency switching.

KEY FEATURES

- ☉ Low reverse recovery charge
- ☉ High switching speed
- ☉ Low forward Volt Drop
- ☉ Isolated AlSiC base with AlN substrates
- ☉ Single, double and triple diode configurations available with current ratings up to 3600A

APPLICATIONS

- ☉ Chopper diodes
- ☉ Boost and buck circuits
- ☉ Free-wheel circuits
- ☉ Multi-level switch inverters
- ☉ Rail traction
- ☉ Industrial motor drives
- ☉ Induction heating
- ☉ Power generation

Bipolar Thyristors

World-class high-efficiency
Bipolar Range

Dynex Semiconductor Bipolar Thyristors are produced in both Lincoln, England and Zhuzhou, China. Development continues to produce designs with lower losses, higher blocking voltages, higher current capability and devices tailored for particular applications.

The Thyristor range consists of Phase Control Thyristors, Gate Turn Off Thyristors, Pulse Power Thyristors and Asymmetric Thyristors.

KEY FEATURES

- ☪ Thinner silicon, lower conduction losses
- ☪ Unique bevel maximises current and surge ratings
- ☪ Exclusive Aluminium diffusion techniques
- ☪ Current ratings from 370A to 7610A
- ☪ Voltage ratings from 1400V to 8500V with custom designs
- ☪ Full blocking voltage capability at line frequencies from -40°C to +125°C

APPLICATIONS

- ☪ High power drives
- ☪ High voltage power supplies
- ☪ Static switches

Phase Control Thyristors

The bypass thyristor range of devices is specially designed for protection of IGBT modules in VSC multi-level applications, where a reduced forward blocking voltage is required. In these applications a thyristor must rapidly divert fault currents from an IGBT diode to protect it from damage. Dynex have designed devices with improved current and surge ratings to assist fault diversion. Such protective thyristors are required to block in parallel with the IGBT diode and as such experience waveforms that are non typical of thyristor applications. They are resistant to fast voltage transients, which they can be exposed to due to the switching of the IGBT diode. The device structures also have greatly enhanced hardness to cosmic ray induced failures which become significant at high duty cycles.

Note: 1. Please contact customer services for the availability of clamps for these devices.

The PT family of Pulsed Power Thyristors (PPTs) is based on Dynex's GTO technology and is designed for long term stability under DC voltages. The structures are resistant to cosmic ray induced failures at normal working voltages. Dynex's Pulsed Power Thyristors may be used to connect a source of stored energy such as a capacitor to a load, or to bypass and protect the load in the case of a crowbar circuit. In these pulsed power applications where the rate of rise of current is very fast, the pulsed power switch is acting as a closing switch and ordinary phase control thyristors (SCRs) are likely to fail due to the high di/dt experienced.

Pulsed Power Thyristors may also be required to act in the opening switch mode. Such applications may include those where voltage is reapplied to the pulsed power switch shortly after closing and the switch needs to have recovered blocking capability or the transferred energy needs to be controlled. In these applications, the switch needs to have turn-off capability to reduce the natural turn-off time (t_q) of the device. The device is operated in GTO mode with the appropriate commutating gate drive. Dynex has been supplying thyristors used as crowbars to protect other high power circuitry in railway propulsion units and the like for many years. In addition, Dynex has been a supplier of devices used in equipment for the sterilisation of foods by intense light or x-rays since the late 1980s. These applications operate at moderate di/dts and can be satisfied with conventional thyristor solutions.

In the field of ignitron replacements and weld switches, Dynex has been a world leader in the application of solid state devices. Dynex has been involved in the design and manufacture of assemblies for the pulsed power communities on the West Coast of America and at CERN, Switzerland.

For more information on how Dynex can help with your pulsed power needs, please e-mail us at powersolutions@dynexsemi.com

Thyristor Components

Take a look at the components that make up our encapsulated device. The devices are fully floating and therefore are not bonded together and are clamped together to achieve electrical and thermal contact instead. This allows our products to have an excellent temperature cycling life expectancy.

Diodes

Reliable and efficient transfer of energy for a range of applications

The Diode range consists of Rectifier Diodes, Fast Recovery Diodes and Flat base Rectifier Diodes

The Dynex Semiconductor range of Fast Recovery Diodes are designed as snubber and anti-parallel diodes for use with its GTO.

The Rectifier Diodes are rugged converters of AC to DC finding use in industrial, chemical rectifiers and aluminium pot lines.

The Flat Base Rectifier Diodes are rugged converters of AC to DC for the refurbishment of industrial and chemical rectifiers and aluminium pot lines.

APPLICATIONS

- Rotating exciters for power generators
- Protect superconducting magnets
- Wind energy systems
- Freewheeling & clamping circuits
- Flexible AC transmission systems
- Industrial AC and DC drives
- Soft starters, STATs

Rectifier Diodes

The Dynex Semiconductor range of Rectifier Diodes are rugged converters of AC to DC finding use in industrial, chemical rectifiers and aluminium pot lines.

Features

- Current ratings from 410A average to 8800A average
- Voltage ratings from 1400V to 8500V
- High overload capability
- Low losses for high efficiency
- Hermetically sealed for long operational life
- Low thermal resistance

Flat Base Rectifier Diodes

The Dynex Semiconductor range of Flat Base Rectifier Diodes are rugged converters of AC to DC for the refurbishment of industrial and chemical rectifiers and aluminium pot lines.

Features

- Current ratings of 470A average to 860A average
- Voltage ratings of 3kV to 4.8kV
- Low losses for high efficiency
- Hermetically sealed for long operational life
- Easily mounted down with M8 bolts on 46mm centres
- Available anode to base and cathode to base
- Selections available for parallel operation

Fast Recovery Diodes

Fast Recovery Diodes

The Dynex Semiconductor range of Fast Recovery Diodes was designed to be used as snubber and anti-parallel diodes for use with its GTO.

Features

- Lifetime controlled for fast recovery, low recovery charge
- Low transient turn-on voltage
- High surge capability
- Double side cooling

Foundry Services

With a wealth of experience in the design and manufacture of IGBT die and Bipolar wafers, Dynex has the capability to provide world class components to Semiconductor module companies, with a speciality in IGBT die in the range of 1.2kV to 6.5kV.

Dynex offers to the market a broad range of established, proven, Trench Gate and DMOS die that form the basis of Dynex's own high-quality IGBT modules. This Foundry service has been provided to the market for a long time and has recently been opened up to a wider audience.

In addition, with its in-house chip design team, Dynex can customise die to specific customer requirements. This coupled with full technical support, world-class design capability, and rapid response to customer needs, shows that Dynex is truly differentiated in the foundry services arena.

At the same time, Dynex has refined the wafer fabrication processes to achieve benchmark levels of quality, reliability and yields, offering the benefits to the wider market.

Key Benefits:

- Robust process
- Decades of experience
- Broad range of capabilities
- In-house chip design team
- Customisable to suit requirements
- Refined wafer fabrication processes

We are pleased to be offering this technology and process robustness and the benefits it brings to the wider semiconductor market

Explanation of Part Numbers

High Power IGBT & FRD Modules

Example Part Number: DFM800DDM18-A000

D	Dynex Semiconductor Identifier
I/F	I = IGBT / F = FRD
M	Module Generic Identifier
800	IC Current Rating
D/X/A/S/M	Package Outline/Power Terminal layout
D/S/C	Circuit configuration
S/M	Base plate technology S=Copper/M=Metal Matrix
18	Voltage rating divided by 100
(-)	
A/TS/TF/TL	Silicon Technology Identifier
US/UF/UL	
MS/MF/ML	
0	Special Selection Number (defaults to 000 for standard product)

*See page 37, 38, 39 for Package outlines

Rectifier Diodes

Example Part Number: DRD2690Y50-1234

D	Dynex Semiconductor Identifier
RD	Rectifier Diode
2690	Average current rating at 100°C case temperature
Y	Case Outline
50	Vrrm/100
-1234	Special Selection Number

*See page 40 for Package outlines

Phase Control Thyristors

Example Part Number: DCR2630Y52-1234

D	Dynex Semiconductor Identifier
CR	Controlled Rectifier (Thyristor)
2630	Average current rating at 60°C case temperature
Y	Case Outline
52	Vdrm, Vrrm/100
-1234	Special Selection Number

*See page 40 for Package outlines

Gate Turn-off Thyristors

Example Part Number: DGT304SE13-123

D	Dynex Semiconductor Identifier
G	GTO
T	Optional indicates reverse blocking
30	Pellet size code
4	Factory code
S	Iteration A,B,C etc
E	Case Outline
13	Vdrm
-123	Special Selection Number

*See page 41 for Package outlines

Asymmetric Thyristors

Example Part Number: ACR2900VR45-1234

A	Asymmetric
CR	Controlled Rectifier (Thyristor)
2900	Average current rating at 60°C case temperature
V	Case Outline
R/F	Reverse/Forward Blocking type
45	Vrrm /100 or Vdrm /100
-1234	Special Selection Number

*See page 40 for Package outlines

Package Outlines

Module Outlines and Circuit Configurations

All dimensions shown in mm unless stated otherwise.

Package Type: D

Nominal weight: 1000g/1600g

Dual Switch - DDM/S

C¹ and C² - Aux Collector
E¹ and E² - Aux Emitter
G¹ and G² - Gate

Chopper switch - DCM/S

Package Type: E

Nominal weight: 1700g

Single Switch - ESM

3 - Aux Collector
2 - Gate
1 - Aux Emitter

Package Type: F

Nominal weight: 1000g/1600g

Single Switch - FSM/S

C¹ - Aux Collector
E¹ - Aux Emitter
G¹ - Gate

Package Type: N

Nominal weight: 1000g

Single Switch - NSM

C¹ - Aux Collector
E¹ - Aux Emitter
G - Gate

Package Type: P

Nominal weight: 500/750g

Bi-directional Switch - PBM

C¹ - Aux Collector
E¹ and E² - Aux Emitter
G¹ and G² - Gate

Half Bridge - PHM

C¹ - Aux Collector
E¹ and E² - Aux Emitter
G¹ and G² - Gate

Package Type: P

Nominal weight: 500g

Chopper High Side - PKM

Chopper Low Side - PLM

Notes:

1. Mounting recommendations are given in the application note AN4505 'Heatsink Issues For IGBT Modules' available from our website.

Module Outlines and Circuit Configurations

All dimensions shown in mm unless stated otherwise.

Package Type: G

Nominal weight: 1000g

Dual Switch - GDM

C1 and C2 - Aux Collector
E1 and E2 - Aux Emitter
G1 and G2 - Gate

Chopper Switch - GCM

C1 and C2 - Aux Collector
E1 and E2 - Aux Emitter
G1 and G2 - Gate

Package Type: X

Nominal weight: 1100g

Single Switch - XSM

Chopper Switch - XCM

Package Type: A

Nominal weight: 1700g

Single Switch - ASM

Chopper Switch - ACM

3 - Aux Collector
2 - Gate
1 - Aux Emitter

Module Outlines and Circuit Configurations

All dimensions shown in mm unless stated otherwise.

Package Type: E

Nominal weight: 1700g

Triple Diode - EXM

External connection for single diode application

Package Type: X

Nominal weight: 1100g

Dual Diode - XXM

External connection for single diode application

Package Type: F

Nominal weight: 1000g/1600g

Dual Diode - FXM/S

External connection for single diode application

Package Type: N

Nominal weight: 1000g

Dual Diode - NXM

External connection for single diode application

Package Type: P

Nominal weight: 500g

Series Diode - PXM

Notes:

1. Mounting recommendations are given in the application note AN4505 'Heatsink Issues For IGBT Modules' available from our website.

Notes:

1. Mounting recommendations are given in the application note AN4505 'Heatsink Issues For IGBT Modules' available from our website.

Thyristor and Diode Outlines

For detailed dimensions, see datasheet on www.dynexsemi.com

Outline	Flange (A) [mm] Max*	Pole (B) [mm] Nominal*	Depth (D) [mm] Maximum	Weight (kg)
A	148 & 150	100	37	2.6
B	120	85	36	1.5
C	99 & 102	63	28	0.8
D	47	29	15	0.24
E	42	25	15	0.082
F	73 & 75	47	28	0.433
G	57 & 58	35	28	0.25
H	172	110	36	3.5
J	57 & 58	34	36	0.322
K	42	25	27	0.16
L	99 & 100 & 102	63	36	1.05
M	148 & 150	100	27	1.95
N	73 & 75	47	36	0.48
T	42	19	15	0.055
V	110 & 112	73	29	1.1
W	120	84	29	1.55
X	85	53	27	0.6
Y	112 & 120	73 & 78	36	1.45

Notes:

*The character '&' denotes we manufacture products in a generic outline, some of which have one flange/contact diameter and others that have a slightly different flange/contact diameter. There is no choice of flange/contact diameter for a specific device.

GTO Outlines

For detailed dimensions, see datasheet on www.dynexsemi.com

Outline	Flange/Max OD (A) [mm]	Pole (B) [mm]	Depth (D) [mm]	Weight (kg)
C	108	77	27	1.4
E	42	25	15	0.082
CA	56	38	36	0.46
H	100	63	27	0.82
P	56	38	27	0.35
W	120	85	27	1.7
v	85	53	27	1.2

Symbols and Definitions

C_S	Snubber capacitance	P_G	Gate power dissipation
di/dt	Critical rate of rise of on-state/forward current	$P_{G(AV)}$	Mean gate power dissipation
di_{FG}/dt	Rate of rise of positive gate current	P_{GM}	Peak gate power dissipation
di_{GQ}/dt	Rate of rise of reverse gate current (GTO)	Q_r	Recovered charge
dIT/dt	Critical rate of rise of on-state current (GTO)	Q_{rr}	Reverse recovery charge
dsc	Double side cooled	r_T	On-state/forward slope resistance
dV/dt	Critical rate of rise of off-state voltage	$R_{th(c-hs)}$	Thermal resistance – case to heatsink
dIV_D/dt	Rate of rise of off-state voltage (GTO)	$R_{th(j-c)}$	Thermal resistance – junction to case
E_{OFF}	Turn-off energy loss	$R_{th(j-hs)}$	Thermal resistance – junction to heatsink
E_{rec}	Reverse recovery energy	$R_{th(j-w)}$	Thermal resistance – junction to water
$E_{sw(TOT)}$	Total switching energy	T_c	Case temperature
F_m/F	Clamping force/mounting torque	t_{gq}	Gate controlled turn-off time
I^2t	I^2t value	t_q	Turn-off time
I_C	Collector current	t_{rr}	Reverse recovery time
$I_{C(PK)}$	Peak collector current	T_{HS}	Heatsink temperature
I_{DRM}	On-state leakage current (thyristor)	T_{vj}	Virtual junction temperature
I_F	Forward current (diode)	$T_{vj(m)}$	Maximum virtual junction temperature
$I_{F(AV)}$	Mean forward current (diode)	T_{water}	Water temperature
I_{FM}	Peak forward current (diode)	$V_{CE(sat)}$	Collector-emitter saturation voltage (IGBT)
$I_{F(RMS)}$	RMS forward current (diode)	V_{CES}	Collector-emitter voltage (IGBT)
I_{FSM}	Single cycle surge current (diode), (10ms half sinewave)	V_{DRM}	Repetitive peak off-state voltage
$I_{G(ON)}$	Gate turn-on current (GTO)	V_{DSM}	Non-repetitive peak off-state voltage
I_{GT}	Gate trigger current	V_F	Forward voltage (diode)
I_{RMS}	RMS line current	V_{FM}	Peak forward voltage (diode)
I_{PK}	Peak current	V_{isol}	Isolation voltage
I_{RRM}	Peak reverse recovery current	V_{GT}	Gate trigger voltage
$I_{T(RMS)}$	RMS on-state current (thyristor)	V_R	Reverse voltage
I_T/I_{TM}	On-state current	V_{RRM}	Repetitive peak reverse voltage
$I_{T(AV)}$	Mean on-state current (thyristor)	V_{RSM}	Non-repetitive peak reverse voltage
I_{TCM}	Maximum repetitive controllable current (GTO)	V_T	On-state voltage
I_{TSM}	Single cycle surge current (thyristor), (10ms half sinewave)	V_{TM}	Peak on-state voltage
		V_{TO}	Threshold voltage (diode)
		$V_{T(TO)}$	Threshold voltage (thyristor)

Important Information

The products and information in this publication are intended for use by appropriately trained technical personnel. Due to the diversity of product applications, the information contained herein is provided as a general guide only and does not constitute any guarantee of suitability for use in a specific application. The user must evaluate the suitability of the product and the completeness of the product data for the application. The user is responsible for product selection and ensuring all safety and any warning requirements are met. Should additional product information be needed please contact our Customer Service team. Although we have endeavoured to carefully compile the information in this publication it may contain inaccuracies or typographical errors. The information is provided without any warranty or guarantee of any kind.

This publication is an uncontrolled document and is subject to change without notice. When referring to it please ensure that it is the most up to date version and has not been superseded. The products are not intended for use in medical or other applications where a failure or malfunction may cause loss of life, injury or damage to property. The user must ensure that appropriate safety precautions are taken to prevent or mitigate the consequences of a product failure or malfunction. The products must not be touched when operating because there is a danger of electrocution or severe burning. Always use protective safety equipment such as appropriate shields for the product and wear safety glasses. Even when disconnected any electric charge remaining in the product must be discharged and allowed to cool before safe handling using protective gloves. Extended exposure to conditions outside the product ratings may affect reliability leading to premature product failure. Use outside the product ratings is likely to cause permanent damage to the product. In extreme conditions, as with all semiconductors, this may include potentially hazardous rupture, a large current to flow or high voltage arcing, resulting in fire or explosion. Appropriate application design and safety precautions should always be followed to protect persons and property.

Product Status and Product Ordering:

We annotate datasheets in the top right hand corner of the front page, to indicate product status if it is not yet fully approved for production. The annotations are as follows:

Target Information:

This is the most tentative form of information and represents a very preliminary specification. No actual design work on the product has been started.

Preliminary Information:

The product design is complete and final characterisation for volume production is in progress. The datasheet represents the product as it is now understood but details may change.

No Annotation:

The product has been approved for production and unless otherwise notified by Dynex any product ordered will be supplied to the current version of the data sheet prevailing at the time of our order acknowledgement.

All products and materials are sold and services provided subject to Dynex's conditions of sale, which are available on request.

Any brand names and product names used in this publication are trademarks, registered trademarks or trade names of their respective owners.

Warning Counterfeit Products:

There are counterfeit products on the semiconductor marketplace. Unfortunately, many of these products will have markings and labels that closely resemble those from Dynex's genuine products, making it difficult to realise the difference. Dynex has extensive, proven controls to ensure its products are properly manufactured, tested, handled, and stored to prevent failures. Counterfeit products will not have been subjected to these processes. Therefore, Dynex does not warrant any parts purchased through unauthorised channels nor do we accept any liability for failure of counterfeit products.

Dynex's Advice to customer is as follows:

Only purchase from Dynex directly or from one of Dynex's authorised distributors. Our Customer Services team can advise you whether a distributor is authorised via the details below.

Dynex products should not be purchased if the outer appearance differs from Dynex products you normally receive unless Dynex or a Dynex authorised distributor has provided you with a product change notification or can be seen on datasheets from the Dynex Website. We strongly advise against purchasing extraordinarily low priced Dynex products from unauthorised distributors. Dynex does not support the sale of Dynex products via online auction houses. We will be pleased to confirm the authenticity of the products. To do so please contact Dynex's Customer Services (see reverse for contact information) with the following information:

- Part number, quantity purchased, unit cost
- Name and contact name of the supplier with address, phone, and web/e-mail addresses
- Digital photos of inner and outer label, inner and outer packaging, and front and back of product
- Copy of purchase order and invoice

This is intended to provide you with additional information on counterfeiting and steps that can be taken to better recognize counterfeit products.
