
CHT-BG3M-Datasheet

Version: 1.5
2-May-12
(Last Modification Date)

High Temperature Voltage Reference 2.5V; 3.3V; 5V; 9V; 10V or 12V +/- 2%

General Description

The CHT-BG3M is a bandgap voltage reference compatible with High Temperature environments. Typical operation temperature range extends from -55°C to 225°C. Its total precision (initial plus temperature drift plus line and load regulation) is better than 2%.

The CHT-BG3M is a one-die solution, with a quiescent current consumption of 700µA.

The circuit can deliver an output current of up to 3mA into an external load at 225°C. It is stable throughout the whole temperature range for load capacitances between 0 and 3nF.

The minimum dropout voltage is 1.5V⁽¹⁾ with a load current lower than 1mA and 2.5V⁽¹⁾ at 3mA load current. The maximum acceptable dropout voltage ($V_{in}-V_{out}$) is 15V.

The CHT-BG3M is available in TO-39 package. Other packages are available upon request.

Applications

Precise Voltage reference with low temperature drift for High Temperature electronic systems used in Well logging, Automotive, Aeronautics or Aerospace applications.

Features

- 1.5V⁽¹⁾ to 15V⁽²⁾ Dropout voltage @1mA
- 2.5V⁽¹⁾ to 15V⁽²⁾ Dropout voltage @3mA
- Max. output current: 3mA @225°C
- Max. load capacitance 3nF
- Available in TO-39 or in custom package on demand. (3-pin compatible)
- Validated at 225°C for 30000 hours (and still on-going)
- Start-up operational over the whole temperature range
- Latch-up free

Note 1: for CHT-BG3M-025, min dropout is 2V @1mA and 3V @3mA

Note 2: Input voltage cannot exceed 25V.

Absolute Maximum Ratings

 Supply Voltage V_{in} -0.5 to 25V
 Junction temperature 315°C

Operating Conditions

 Dropout Voltage $1.5V^{(1)}$ to $15V^{(2)}$
 Junction temperature -55°C to +225°C

ESD Rating (expected)

Human Body Model 1kV

Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Frequent or extended exposure to absolute maximum rating conditions or above may affect device reliability. During power up/restart without voltage regulator and depending on the quality of the power supply, peak voltage higher than 25V may be seen by the BG3M input, which exceeds the absolute maximum ratings and can cause permanent damage. This issue can be minimized by adding big decoupling capacitor (>10µF) close to the BG3M input.

Electrical Characteristics

Following table is relative to the 5V mode (CHT-BG3M-050).

For other nominal voltage, see notes under this table.

 Values over the whole temperature range (-55°C < T_j < 225°C) in bold.

Parameter	Condition	Min	Typ	Max	Units	note
Output voltage						
Initial accuracy	$I_L=1mA$, $V_{in}=V_{out}+3V$, $T_j = 25^\circ C$	-1		+1	%	
Total accuracy	$I_L=[1mA..3mA]$, $V_{in} = [V_{out}+3V .. V_{out}+15V]$	-2	0	2	%	
Drift with temperature	$I_L=1mA$, $V_{in}=V_{out}+3V$	0		70	ppm	(3)
Line regulation	$I_L=1mA$, $V_{in}=[V_{out}+2V..V_{out}+15V]$	-1		1	mV/V	(4)
Load regulation R_{out}	$I_L=0mA$ to 3mA $V_{in}=V_{out}+3V$ $T_j=25^\circ C$		-7		mV/mA	
	$I_L=0mA$ to 3mA $V_{in}=V_{out}+3V$ $T_j=225^\circ C$			-16		
Dropout $V_{in}-V_{out}$	$I_L=1mA$	1.5			V	(1)
	$I_L=3mA$	2.5			V	(1)
Quiescent Ground Pin current	$0 < I_L < 3mA$; $V_{in}=V_{out}+3V$		700	800	µA	
Power supply rejection ratio	$f=0Hz .. 100Hz$ $V_{in}=V_{out}+2V$; $I_{load}=0mA$	60			dB	(5)
Output noise	10Hz-10kHz $I_L=0mA$		240		µV _{RMS}	(6)

Note 1: for CHT-BG3M-025, min dropout is 2V @1mA and 3V @3mA

Note 2: Input voltage cannot exceed 25V.

 Note 3: ppm are defined as $[d(V_{out})/d(T)]/V_{out}$. For 5V mode, 70ppm corresponds to 350µV/°C.

Note 4: Defining "x" as the nominal voltage, the line regulation is better than x/5 mV/V.

Note 5: Defining "x" as the nominal voltage, the minimum power supply rejection ratio is 66-1.2x .dB

Note 6: Defining "x" as the nominal voltage, typical noise level is (x/5)*240µVRMS

Typical Performance Characteristics (5V mode)

Available Packaging Options

Figure 1. CHT-BG3M in TO-39 package

NOTES:

- The CHT-BG3M can also be ordered as die.
- Packaging options shown are only indicative. Other possibilities are also available.
- Ask CISSOID for other packaging configurations.

Product Reference

CHT-BG3M-XXX-YYYY

XXX= Output voltage. Example : 3.3V=033 ; 5V=050 ; 12V=120

YYYY= TO39

Ex: CHT-BG3M-050-TO39 = 5V reference with TO39 package

Package Dimensions

Drawing TO39 (mm +/- 10%)
