Garry's open frame construction offers enhanced cooling and ease of cleaning. The open frame series of sockets allows for visual inspection of all solder joints and circuits below the socket.

- Standard, glass reinforced, thermoplastic bodies (UL94V-0 rated) permit low-profile component mounting.
- Four fingered Beryllium copper contacts provide excellent insertion-to-withdrawal ratios on I.C. leads as short as .090" to accommodate differences in lead lengths among chip suppliers.
- Four points of contact redundancy and standard gold plating on spring clip contacts provide maximum mechanical and electrical performance.
- Precise socket body dimensions permit end-to-end and side-by-side stackable on .100" spacing.
- Precision design allows for ease of insertion using automatic insertion equipment.

- Precision machined outer sleeve features closed bottom to eliminate solder wicking problems.
- Withstands severe environmental conditions including military requirements of high shock and vibration.

Materials:

Insulator:
Glass reinforced, thermoplastic polyester, rated UL94V-0. Color: Black

Spring Contact:
Beryllium copper, Gold over nickel plating

Outer sleeve:
Brass. Gold over nickel.
Tin Lead over nickel plating.

Plating options and specifications are available by contacting either the Garry factory or your local representative.

Garry offers three (3) types of inter contact clips.

- *Standard insertion clip - 4 finger (used on SIP/DIP products)*
- *Low insertion clip - 6 finger (used on PGA STD Pin counts)*
- *Ultra low insertion clip - 3 finger (used on high pin count PGA and Interstitial PGA)*
