UFA_MP-6W & UFB_MP-6W Series 6W, WIDE INPUT, ISOLATED & REGULATED DUAL & SINGLE OUTPUT DC-DC CONVERTER

Patent Protection RoHS

PART NUMBER SYSTEM

UFA2405MP-6W

FEATURES

- DIP package
- Efficiency up to 85%
- 4:1 wide input voltage range
- 1.5KVDC input/output isolation
- Continuous short circuit protection
- Operating temperature range: -40°C ~ +85°C
- Metal shielding package
- Good high temperature properties, can meet the industrial products technical requirements

APPLICATIONS

The UFA_MP-6W & UFB_MP-6W Series are specially designed for applications where a wide range input voltage power supplies are unregulated from the input power supply in a distributed power supply system on a circuit board.

These products apply to where:

- 1) Input voltage range $\leq 4:1$;
- 2) 1.5KVDC input and output isolation;
- 3) Output regulated and low ripple noise is required.

TEST CONFIGURATIONS

Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with a inductor L_{in} and C_{in} to simulate source impedance.

DESIGN & APPLY CONSIDERATIONS

1) Requirement on output load

To ensure this module can operate efficiently and reliably, During operation, the minimum output load **could not be less than 10% of the full load**. If the actual output power is very small, please connect a resistor with proper resistance at the output end in parallel to increase the load, or use our company's products with a lower rated output power.

2) Overload Protection

Under normal operating conditions, the output circuit of these products has no protection against overload. The simplest method is add a circuit breaker to the circuit.

3) Recommended Circuit

All the UFA_MP-6W & UFB_MP-6W series have been tested according to the following recommended testing circuit before leaving factory. This series should be tested under load. Never be tested under no load (see Figure 4).

If you want to further decrease the output ripple, you can increase capacitance properly or choose capacitors with low ESR. However, the capacitance should not be too high (Table 1).

(Figure 4)

EXTERNAL CAPACITOR TABLE (TABLE 1)

Output Voltage		Capacitance $C_{out}^{\#}(\mu F)$	$C_{in}(\mu F)$
Single	3.3V, 5V	220	100
	12V, 15V	100	
	24V	47	
Dual	$\pm 5V$	100	
	$\pm 12V, \pm 15V$	47	
	$\pm 24V$	22	

Note: # For each output.

4) No parallel connection or plug and play

Note:

- The load shouldn't be less than 10%, otherwise ripple will increase dramatically. Operation under minimum load will not damage the converter; However, they may not meet all specification listed.
- All specifications measured at $T_a=25^{\circ}C$, humidity<75%, nominal input voltage and rated output load unless otherwise specified.
- In this datasheet, all the test methods of indications are based on corporate standards.
- Only typical models listed, other models may be different, please contact our technical person for more details.
- Our company offer custom products.
- Specifications subject to change without notice.
