

QA04

Application Design For IGBT Driver DC-DC Converter

QA04 is an application-designed power supply for the IGBT driver which needs two outputs isolated from the input. With two outputs, it can be better to drive IGBT effectively. The module also provides functions of short-circuit protection and auto-recovery capability.

FEATURES

- Input: 9~15VDC
- Output: 15V, 100mA
- Efficiency up to 80%
- Small footprint
- SIP package
- Output short circuit protection
- 3000VAC isolation
- Operation temperature: -40°C ~ +105°C
- no preload requirement
- RoHS compliance

 C2: 100 μ F/35V(Low impedance)
 C3: 100 μ F/35V(Low impedance)

Application Notes

1. The wire between the converter and IGBT driver should be as short as possible;
2. External filter capacitors should be placed as close as possible to the converter and the IGBT driver;
3. To ensure the high peak gate current, the filter capacitors should be with low impedance.
4. The output average power of the IGBT driver should be less than the output power of DC-DC module.
5. In order to avoid over-temperature damage for long time short-circuit, the recommended duration time of short-circuit is less than ten minutes at 25°C.
