

WRA_CKS-1W & WRB_CKS-1W Series

***1W, WIDE INPUT, ISOLATED & REGULATED
DUAL/SINGLE OUTPUT SIP DC-DC CONVERTER***

Patent Protection

PART NUMBER SYSTEM

FEATURES

- 2:1 wide input range
 - 1500VDC Isolation
 - Short circuit protection
(automatic recovery)
 - Remote ON/OFF control
 - High Power Density
 - Operating Temperature: -40°C to +85°C
 - UL94-V0 Package

APPLICATIONS

The WRA_CKS-1W & WRB_CKS-1W series are designed for application where a wide input voltage range, isolated output is required from a distributed power system. For these DC-DC converters, You can reduce the design point of failure and save the development of micro power supply's manpower, material and time costs, also better ensure product quality stability, protect safety and reliability of the end of products.

These products apply to where:

- 1) Input voltage range \leq 2:1;
 - 2) 1.5KVDC input and output isolation;
 - 3) Regulated and low ripple noise is required.

Note: 1. In Figure 1, part ① is EMS Recommended external circuit, part ② is EMI recommended external circuit. Choose according to requirements.

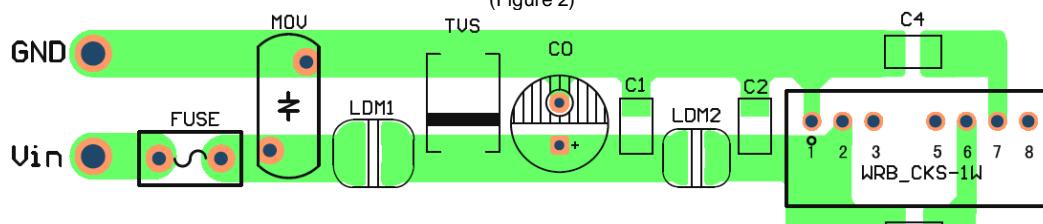

2. If there is no recommended parameters, the model no require the external component.

3. If have higher expectations of WRA12_CKS-1W ESD testing, must be added ESD protection to the CTRL pin ,can be used two chip capacitors and a resistor form π circuit.

OUTLINE DIMENSIONS, RECOMMENDED FOOTPRINT & PACKAGING

TEST CONFIGURATIONS

Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with an inductor Lin and Cin to simulate source impedance.

DESIGN CONSIDERATIONS

1) Requirement on output load

To ensure this module can operate efficiently and reliably, During operation, the minimum output load **could not be less than 10% of the full load**. If the actual output power is very small, please connect a resistor with proper resistance at the output end in parallel to increase the load, or use our company's products with a lower rated output power.

2) Overload Protection

Under normal operating conditions, the output circuit of these products has no protection against overload. The simplest method is add a circuit breaker to the circuit.

3) Recommended circuit

If you want to further decrease the input/output ripple, an "LC" filtering network may be connected to the input and output ends of the DC/DC converter, see (Figure 4).

However, the capacitance of the output filter capacitor must be proper. If the capacitance is too big, a startup problem might arise. For every channel of output, provided the safe and reliable operation is ensured, the greatest capacitance of its filter capacitor must less than the Max. Capacitive Load.

General: Cin: 5V,12V 100 μ F;

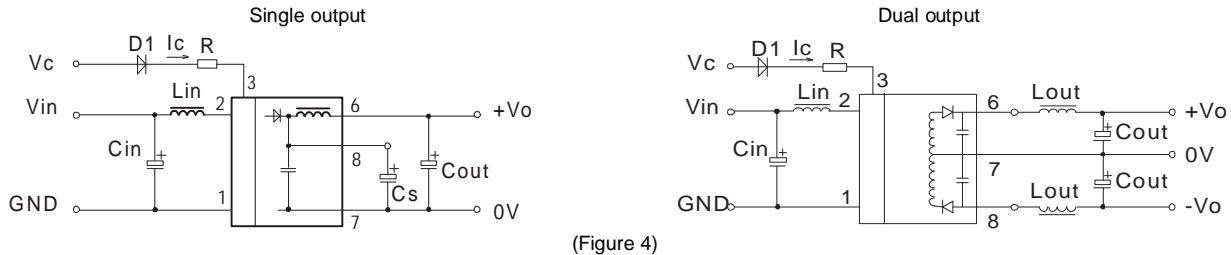

24V,48V 10 μ F

Cout: 47 μ F (Typ.)

Lin: 4.7 μ H~120 μ H

Lout: 2.2 μ H~10 μ H

Cs: 10 μ F~22 μ F

(Figure 4)

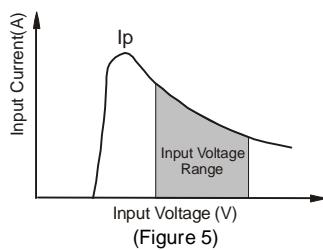

4) CTRL Terminal

When open or high impedance, the converter work well; When this pin is 'high'; the converter shutdown; It should be note that the input current should between 5-10mA, exceeding the maximum 20mA will cause permanence damage to the converter. The value of R can be derived as follows:

$$R = \frac{V_C - V_D - 1.0}{I_C}$$

5) Input current

Nominal input voltage range. The input current of the power supply must be sufficient to the startup current (I_p) of the DC/DC module(Figure 5). General: $I_p \leq 1.4 * I_{in\max}$

(Figure 5)

6) Cannot use in parallel and hot swap

Note:

1. The load shouldn't be less than 10%, otherwise ripple will increase dramatically. Operation under minimum load will not damage the converter; However, they may not meet all specification listed.
2. All specifications measured at $T_a=25^\circ C$, humidity<75%, nominal input voltage and rated output load unless otherwise specified.
3. In this datasheet, all the test methods of indications are based on corporate standards.
4. Only typical models listed, other models may be different, please contact our technical person for more details.
5. Our company offer custom products.
6. Specifications subject to change without notice.
