MORNSUN®

WRD_S-1W & WRD_S-2W Series 1W & 2W, WIDE INPUT, ISOLATED & REGULATED TWIN OUTPUT DC-DC CONVERTER

Patent Protection RoHS

FEATURES

- 2:1 wide input voltage range
- Miniature SIP package
- Input-Output Isolation 1500VDC Output-Output Isolation 1000VDC
- Short circuit protection (automatic recovery)
- Internal SMD construction
- Operating temperature: -40°C to +85°C
- RoHS Compliance

APPLICATIONS

The WRD_S-1W & WRD_S-2W series are specially designed for applications where a wide range input voltage power supplies are isolated from the input power supply in a distributed power supply system on a circuit board.

These products apply to:

- 1) Where the voltage of the input power supply is wide range (voltage range ≤2:1);
- 2) Where isolation is necessary between input and output (Isolation Voltage ≤ 1500VDC);
- 3) Where isolation is necessary between Vout1 and Vout2 (Isolation Voltage ≤ 1000VDC);
- 4) Where the regulation of the output voltage and the output ripple noise are demanded.

^{*}Dual output models unbalanced load: ±5%.

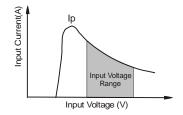

By connecting a low ESR capacitor between this terminal and the pin-7(Figure 1), the output ripple and noise may be further improved. Generally, the capacitance is no greater than 47uF.

To ensure this module can operate efficiently and reliably, During operation, the minimum

RECOMMENDED CIRCUIT

(Figure 1)

(Figure 2)

output load is not less than 10% of the full load, If the actual load is less than the specified minimum load, the output ripple may increase sharply. If the actual output power is very small, please add an appropriate resistor as extra loading, or contact our company for other lower output power products.

3) Recommended Circuit

APPLICATION NOTE

2) Requirement on Output Load

1) CS Pin

If you want to further decrease the input/output ripple, you can increase capacitance properly or choose capacitors with low ESR (Figure 1).

However, the capacitance of the output filter capacitor must be proper. If the capacitance is too big, a startup problem might arise. For every channel of output, provided the safe and reliable operation is ensured, the greatest capacitance of its filter capacitor sees (Table 1)

Cin: 5V & 12V 100μF 24V & 48V 10μF-47μF

 $\begin{array}{ll} \text{Lin:} & 10 \mu \text{H-} 120 \mu \text{H} \\ \text{Cout:} & 100 \mu \text{F(TYP)} \end{array}$

4) Input current

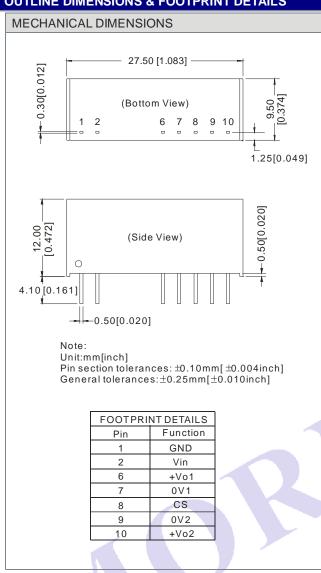

While using unstable power source, please ensure the output voltage and ripple voltage do not exceed indexes of the converter. The preceding power source must be able to provide for converter sufficient starting current Ip (Figure 2). General: Ip ≤1.4*Iin-max

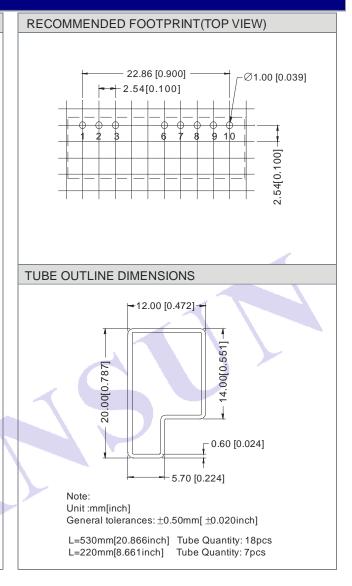

5) No parallel connection or plug and play

| External Capacitor Table (Table 1) | | | | | | |
|------------------------------------|-------------|-------------|--|--|--|--|
| Vout(VDC) | 2W:Cout(uF) | 1W:Cout(uF) | | | | |
| 5 | 680 | 470 | | | | |
| 9 | 470 | 330 | | | | |
| 12 | 330 | 220 | | | | |

| 24 | 100 | 47 | | | | |

^{**}Test ripple and noise by "parallel cable" method. See detailed operation instructions at Testing of Power Converter section, application notes.

OUTLINE DIMENSIONS & FOOTPRINT DETAILS

Note:

- 1. The load shouldn't be less than 10%, otherwise ripple will increase dramatically.
- 2. Operation under 10% load will not damage the converter; However, they may not meet all specification listed.
- 3. All specifications measured at Ta=25°C, humidity<75%, nominal input voltage and rated output load unless otherwise specified.
- 4. In this datasheet, all the test methods of indications are based on corporate standards.
- 5. Only typical models listed, other models may be different, please contact our technical person for more details.
