3W, DIY AC/DC converter

## FEATURES

- Ultra-wide 85-305VAC and 70-430VDC input voltage range
- Accepts AC or DC input (dual-use of same terminal)
- Operating ambient temperature range $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
- Multi application, flexible layout
- Compact size, high power density, green power
- Controllable life and adjustable cost
- No-load power consumption 0.1W
- Output short circuit, over-current protection
- Designed to meet IEC/EN61558, IEC/EN60335 standards
- IEC/EN/UL62368 safety approval

LSO3-13BxxR3 series is one of Mornsun's highly efficient green power AC-DC Converter series. They feature wide input range accepting either AC or DC voltage, high efficiency, low power consumption and reinforced isolation. All models are particularly suitable for industrial control, electric power, instrumentation and smart home applications which have high requirement for dimension and don't have high requirement on EMC. For extremely harsh EMC environment, we recommend using the application circuit show in Design Reference of this datasheet.

## Product Characteristic Curve

## Note：

（1）With an AC input between $85-100 \mathrm{VAC} / 277-305 \mathrm{VAC}$ and a DC input between $70-120 \mathrm{VDC} / 390-430 \mathrm{VDC}$ ，the output power must be derated as per temperature derating curves；
（2）This product is suitable for applications using natural air cooling；for applications in closed environment please consult factory or one of our FAE．

Note：
1． Cl is used as filter capacitor with AC input（must be connected externally）and as EMC filter capacitor with DC input（must be connected），and it is recommended to use the capacitor with ripple current $>200 \mathrm{~mA} @ 100 \mathrm{KHz}$ ．If Cl capacity is more than $22 \mu \mathrm{~F}$ ，can not connect current limiting resistor RI（R1 is EMS protective circuit device，see application circuit）．
2．We recommend using an electrolytic capacitor with high frequency and low ESR rating for C3（refer to manufacture＇s datasheet），electrolytic capacitor can be used for C 2 when applied in normal and high temperature environments．Combined with C2，L1，they form a pi－type filter circuit．Choose a capacitor voltage rating with at least $20 \%$ margin，in other words not exceeding $80 \%$ ．C4 is a ceramic capacitor，used for filtering high frequency noise．
3．A suppressor diode（TVS）is recommended to protect the application in case of converter failure and specification should be 1.2 times of the output voltage．

1. For additional information on Product Packaging please refer to www.mornsun-power.com. Packaging bag number: 58220084;
2. External electrolytic capacitors are required to modules, more details refer to typical applications;
3. This part is open frame, at least 6.4 mm creepage distance between the primary and secondary external components of the module is needed to meet the safety requirement, refer to the recommended welding hole design in the external dimension drawing;
4. Unless otherwise specified, parameters in this datasheet were measured under the conditions of $\mathrm{Ta}=25^{\circ} \mathrm{C}$, humidity $<75 \%$, nominal input voltage ( 115 V and 230 V ) and rated output load;
5. All index testing methods in this datasheet are based on our company corporate standards;
6. We can provide product customization service, please contact our technicians directly for specific information;
7. Products are related to laws and regulations: see "Features" and "EMC";
8. Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units.
