## General Description

The 'AC/'ACT109 consists of two high-speed completely independent transition clocked JK\# flip-flops. The clocking operation is independent of rise and fall times of the clock waveform. The JK\# design allows operation as a D flip-flop (refer to 'AC/'ACT74 data sheet) by connecting the J and $\mathrm{K} \#$ inputs together.

Asynchronous Inputs:
LOW input to $\mathrm{S}_{\mathrm{D}}$ (Set) sets Q to HIGH level
LOW input to $\mathrm{CH}_{\mathrm{D}}$ (Clear) sets Q to LOW level
Clear and Set are independent of clock
Simultaneous LOW on $\mathrm{C}_{\mathrm{D}}$ and $\mathrm{S} \#_{\mathrm{D}}$ makes both Q and $\mathrm{Q} \#$

## Features

- $\mathrm{I}_{\mathrm{CC}}$ reduced by $50 \%$
- Outputs source/sink 24 mA
- 'ACT109 has TTL-compatible inputs
- Standard Military Drawing (SMD) -'AC109: 5962-89551 -'ACT109: 5962-88534
