# i.MX 6UltraLite Applications Processors for Industrial Products

## 1 i.MX 6UltraLite Introduction

The i.MX 6UltraLite is a high performance, ultra efficient processor family featuring Freescale’s advanced implementation of the single ARM Cortex®-A7 core, which operates at speeds up to 528 MHz. The i.MX 6UltraLite includes an integrated power management module that reduces the complexity of the external power supply and simplifies the power sequencing. Each processor in this family provides various memory interfaces, including LPDDR2, DDR3, DDR3L, Raw and Managed NAND flash, NOR flash, eMMC, Quad SPI, and a wide range of other interfaces for connecting peripherals, such as WLAN, Bluetooth™, GPS, displays, and camera sensors.

The i.MX 6UltraLite is specifically useful for applications such as:

- Electronics Point-of-Sale device
- Telematics

## i.MX 6UltraLite Introduction

- IoT Gateway
- Access control panels
- Human Machine Interfaces (HMI)
- Smart appliances

The features of the i.MX 6UltraLite processor include<sup>1</sup>:

- Single-core ARM Cortex-A7—The single core A7 provides a cost-effective and power-efficient solution.
- Multilevel memory system—The multilevel memory system of each device is based on the L1 instruction and data caches, L2 cache, and internal and external memory. The device supports many types of external memory devices, including DDR3, low voltage DDR3, LPDDR2, NOR Flash, NAND Flash (MLC and SLC), OneNAND™, Quad SPI, and managed NAND, including eMMC up to rev 4.4/4.41/4.5.
- Smart speed technology—Power management implemented throughout the IC that enables multimedia features and peripherals to consume minimum power in both active and various low power modes.
- Dynamic voltage and frequency scaling—The processor improves the power efficiency by scaling the voltage and frequency to optimize performance.
- Multimedia powerhouse—Multimedia performance is enhanced by a multilevel cache system, NEON™ MPE (Media Processor Engine) co-processor, a programmable smart DMA (SDMA) controller, an asynchronous audio sample rate converter, and a Pixel processing pipeline (PXP) to support 2D image processing, including color-space conversion, scaling, alpha-blending, and rotation.
- Ethernet interfaces—10/100 Mbps Ethernet controllers.
- Human-machine interface—Support one digital parallel display interface.
- Interface flexibility—Each processor supports connections to a variety of interfaces: High-speed USB on-the-go with PHY, multiple expansion card port (high-speed MMC/SDIO host and other), 12-bit ADC module, CAN port, smart card interface compatible with EMV Standard v4.3, and a variety of other popular interfaces (such as UART, I<sup>2</sup>C, and I<sup>2</sup>S serial audio).
- Advanced security—The processor deliver hardware-enabled security features that enable secure e-commerce, digital rights management (DRM), information encryption, secure boot, and secure software downloads. The security features are discussed in detail in the *i.MX 6UltraLite Security Reference Manual* (IMX6ULSRM).
- Integrated power management—The processor integrates linear regulators and internally generate voltage levels for different domains. This significantly simplifies system power management structure.

For a comprehensive list of the i.MX 6UltraLite features, see [Section 1.2, “Features”](#).

1. The actual feature set depends on the part numbers as described in the [Table 1](#) and [Table 2](#).

## 1.1 Ordering Information

Table 1 provides examples of orderable part numbers covered by this data sheet.

**Table 1. Ordering Information**

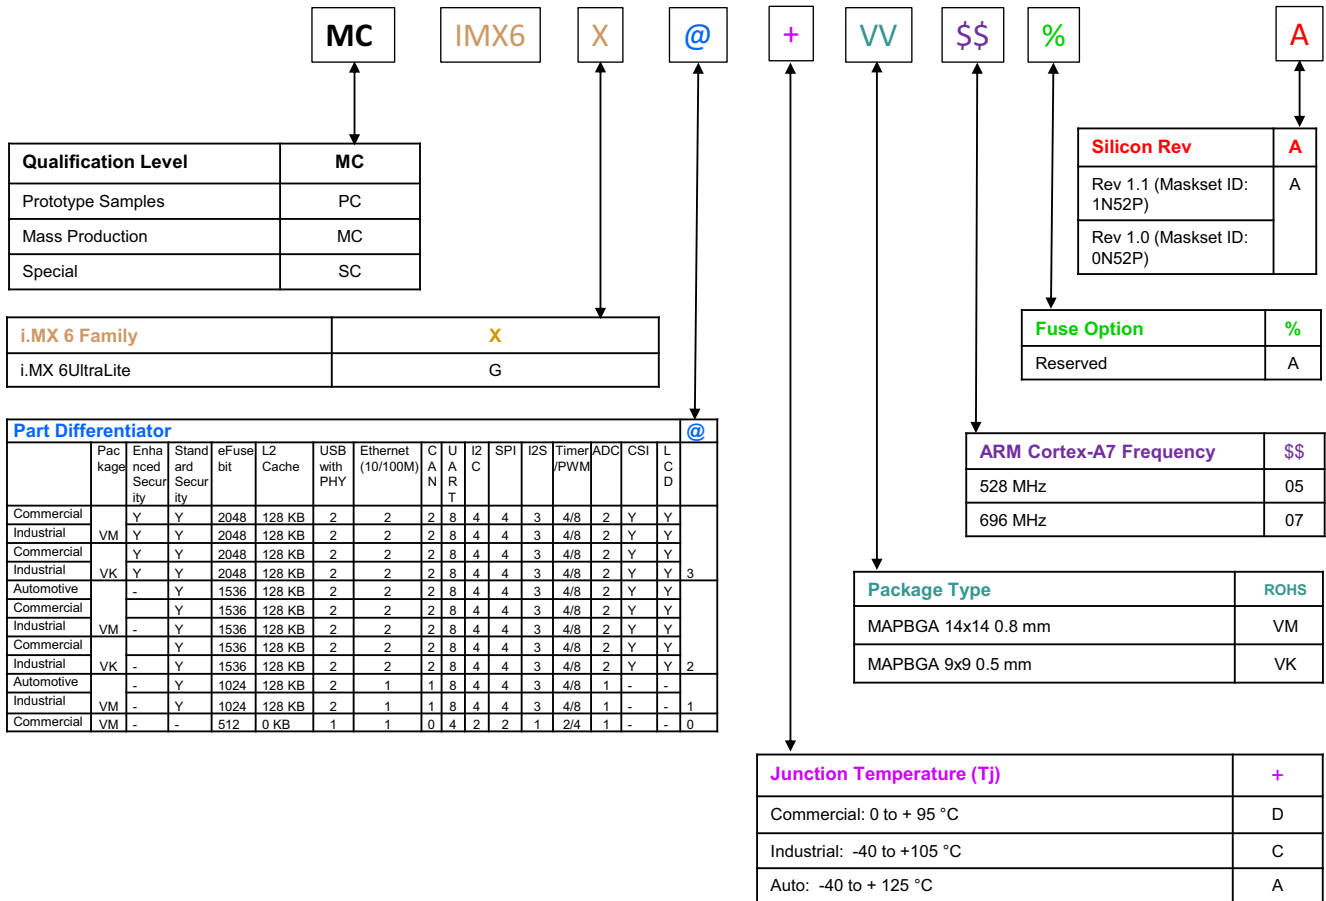

| Part Number     | Feature              | Package                    | Junction Temperature T <sub>j</sub> (°C) |
|-----------------|----------------------|----------------------------|--|
| MCIMX6G1CVM05AA | Single Core, 528 MHz | 14 x 14 mm, 0.8 pitch, BGA | -40 to +105                              |
| MCIMX6G2CVM05AA | Single Core, 528 MHz | 14 x 14 mm, 0.8 pitch, BGA | -40 to +105                              |
| MCIMX6G3CVM05AA | Single Core, 528 MHz | 14 x 14 mm, 0.8 pitch, BGA | -40 to +105                              |
| MCIMX6G2CVK05AA | Single Core, 528 MHz | 9 x 9 mm, 0.5 pitch, BGA   | -40 to +105                              |
| MCIMX6G3CVK05AA | Single Core, 528 MHz | 9 x 9 mm, 0.5 pitch, BGA   | -40 to +105                              |

Figure 1 describes the part number nomenclature so that characteristics of a specific part number can be identified (for example, cores, frequency, temperature grade, fuse options, and silicon revision). The primary characteristic which describes which data sheet applies to a specific part is the temperature grade (junction) field.

- The i.MX 6UltraLite Applications Processors for Industrial Products Data Sheet (IMX6ULIEC) covers parts listed with a “C (Industrial temp)”

Ensure to have the proper data sheet for specific part by verifying the temperature grade (junction) field and matching it to the proper data sheet. If there are any questions, visit the web page [nxp.com/imx6series](http://nxp.com/imx6series) or contact an NXP representative for details.

<sup>1</sup>For detailed pin mux information, please refer to “Chapter 4 External Signals and Pin Multiplexing” of *i.MX 6UltraLite Reference Manual (IMX6ULRM)*.

<sup>2</sup> Y stands for yes, NA stands for not available.

<sup>3</sup> G0 and G3 are not offered in automotive grade.

## 1.2 Features

The i.MX 6UltraLite processors are based on ARM Cortex-A7 MPCore™ Platform, which has the following features:

- Supports single ARM Cortex-A7 MPCore (with TrustZone) with:
  - 32 KBytes L1 Instruction Cache
  - 32 KBytes L1 Data Cache
  - Private Timer
  - Cortex-A7 NEON Media Processing Engine (MPE) Co-processor
- General Interrupt Controller (GIC) with 128 interrupts support
- Global Timer
- Snoop Control Unit (SCU)
- 128 KB unified I/D L2 cache
- Single Master AXI bus interface output of L2 cache
- Frequency of the core (including Neon and L1 cache), as per [Table 11, "Operating Ranges," on page 23](#).

The SoC-level memory system consists of the following additional components:

- Boot ROM, including HAB (96 KB)
- Internal multimedia/shared, fast access RAM (OCRAM, 128 KB)
- Secure/non-secure RAM (32 KB)
- External memory interfaces: The i.MX 6UltraLite processors support handheld DRAM, NOR, and NAND Flash memory standards.
  - 16-bit LP-DDR2-800, 16-bit DDR3-800 and LV-DDR3-800
  - 8-bit NAND-Flash, including support for Raw MLC/SLC, 2 KB, 4 KB, and 8 KB page size, BA-NAND, PBA-NAND, LBA-NAND, OneNAND™ and others. BCH ECC up to 40 bits.
  - 16/8-bit NOR Flash. All EIMv2 pins are muxed on other interfaces.

Each i.MX 6UltraLite processor enables the following interfaces to external devices (some of them are muxed and not available simultaneously):

- Displays:
  - One parallel display port supports max 85 MHz display clock and up to WXGA (1366 x 768) at 60 Hz
  - Support 24-bit, 18-bit, 16-bit, and 8-bit parallel display
- Camera sensors<sup>1</sup>:
  - One parallel camera port, up to 24 bit and 148.5 MHz pixel clock
  - Support 24-bit, 16-bit, 10-bit, and 8-bit input
  - Support BT.656 interface
- Expansion cards:
  - Two MMC/SD/SDIO card ports all supporting:
    - 1-bit or 4-bit transfer mode specifications for SD and SDIO cards up to UHS-I SDR-104 mode (104 MB/s max)
    - 1-bit, 4-bit, or 8-bit transfer mode specifications for MMC cards up to 52 MHz in both SDR and DDR modes (104 MB/s max)
    - 4-bit or 8-bit transfer mode specifications for eMMC chips up to 200 MHz in HS200 mode (200 MB/s max)
- USB:
  - Two high speed (HS) USB 2.0 OTG (Up to 480 Mbps), with integrated HS USB Phy
- Miscellaneous IPs and interfaces:
  - Three SAI supporting up to three I2S
  - Sony Philips Digital Interconnect Format (SPDIF), Rx and Tx
  - Eight UARTs, up to 5.0 Mbps each:
    - Providing RS232 interface
    - Supporting 9-bit RS485 multidrop mode
    - Support RTS/CTS for hardware flow control
  - Four enhanced CSPI (eCSPI)

1. G2 and G3 only

## i.MX 6UltraLite Introduction

- Four I<sup>2</sup>C
- Two 10/100M Ethernet Controller (IEEE1588 compliant)
- Eight Pulse Width Modulators (PWM)
- System JTAG Controller (SJC)
- GPIO with interrupt capabilities
- 8x8 Key Pad Port (KPP)
- One Quad SPI
- Two Flexible Controller Area Network (FlexCAN)
- Three Watchdog timers (WDOG)
- Two 12-bit Analog to Digital Converters (ADC) with up to 10 input channels in total
- Touch Screen Controller (TSC)

The i.MX 6UltraLite processors integrate advanced power management unit and controllers:

- Provide PMU, including LDO supplies, for on-chip resources
- Use Temperature Sensor for monitoring the die temperature
- Use Voltage Sensor for monitoring the die voltage
- Support DVFS techniques for low power modes
- Use SW State Retention and Power Gating for ARM and NEON
- Support various levels of system power modes
- Use flexible clock gating control scheme
- Two smart card interfaces compatible with EVM Standard 4.3

The i.MX 6UltraLite processors use dedicated hardware accelerators to meet the targeted multimedia performance. The use of hardware accelerators is a key factor in obtaining high performance at low power consumption, while having the CPU core relatively free for performing other tasks.

The i.MX 6UltraLite processors incorporate the following hardware accelerators:

- PXP—Pixel Processing Pipeline for image resize, rotation, overlay and CSC<sup>1</sup>. Off loading key pixel processing operations are required to support the LCD display applications.
- ASRC—Asynchronous Sample Rate Converter

Security functions are enabled and accelerated by the following hardware:

- ARM TrustZone including the TZ architecture (separation of interrupts, memory mapping, etc.)
- SJC—System JTAG Controller. Protecting JTAG from debug port attacks by regulating or blocking the access to the system debug features.
- CAAM—Cryptographic Acceleration and Assurance Module, containing cryptographic and hash engines, 32 KB secure RAM, and True and Pseudo Random Number Generator (NIST certified).
- SNVS—Secure Non-Volatile Storage, including Secure Real Time Clock.
- CSU—Central Security Unit. CSU is configured during boot and by eFUSES and determine the security level operation mode as well as the TZ policy.

1. G2 and G3 only

- A-HAB—Advanced High Assurance Boot—HABv4 with the new embedded enhancements: SHA-256, 2048-bit RSA key, version control mechanism, warm boot, CSU, and TZ initialization.

**NOTE**

The actual feature set depends on the part numbers as described in [Table 1](#) and [Table 2](#). Functions such as display and camera interfaces, connectivity interfaces, and security features are not offered on all derivatives.

## 2 Architectural Overview

The following subsections provide an architectural overview of the i.MX 6UltraLite processor system.

### 2.1 Block Diagram

Figure 2 shows the functional modules in the i.MX 6UltraLite processor system.

Figure 2. i.MX 6UltraLite System Block Diagram<sup>1</sup>

1. Some modules shown in this block diagram are not offered on all derivatives. See Table 2 for exceptions.

### 3 Modules List

The i.MX 6UltraLite processors contain a variety of digital and analog modules. [Table 3](#) describes these modules in alphabetical order.<sup>1</sup>

**Table 3. i.MX 6UltraLite Modules List**

| Block Mnemonic    | Block Name  | Subsystem                         | Brief Description  |
|-------------------|---|-----------------------------------|--|
| ADC1<br>ADC2      | Analog to Digital Converter   | —                                 | The ADC is a 12-bit general purpose analog to digital converter.   |
| ARM               | ARM Platform  | ARM                               | The ARM Core Platform includes 1x Cortex-A7 core. It also includes associated sub-blocks, such as the Level 2 Cache Controller, SCU (Snoop Control Unit), GIC (General Interrupt Controller), private timers, watchdog, and CoreSight debug modules.   |
| ASRC              | Asynchronous Sample Rate Converter                                      | Multimedia Peripherals            | The Asynchronous Sample Rate Converter (ASRC) converts the sampling rate of a signal associated to an input clock into a signal associated to a different output clock. The ASRC supports concurrent sample rate conversion of up to 10 channels of about -120dB THD+N. The sample rate conversion of each channel is associated to a pair of incoming and outgoing sampling rates. The ASRC supports up to three sampling rate pairs.   |
| BCH               | Binary-BCH ECC Processor  | System Control Peripherals        | The BCH module provides up to 40-bit ECC for NAND Flash controller (GPMI)  |
| CAAM              | Cryptographic accelerator and assurance module                          | Security                          | CAAM is a cryptographic accelerator and assurance module. CAAM implements several encryption and hashing functions, a run-time integrity checker, and a Pseudo Random Number Generator (PRNG). The pseudo random number generator is certified by Cryptographic Algorithm Validation Program (CAVP) of National Institute of Standards and Technology (NIST). Its DRBG validation number is 94 and its SHS validation number is 1455.<br>CAAM also implements a Secure Memory mechanism. In i.MX 6UltraLite processors, the security memory provided is 32 KB. |
| CCM<br>GPC<br>SRC | Clock Control Module, General Power Controller, System Reset Controller | Clocks, Resets, and Power Control | These modules are responsible for clock and reset distribution in the system, and also for the system power management.  |
| CSI               | Parallel CSI  | Multimedia Peripherals            | The CSI IP provides parallel CSI standard camera interface port. The CSI parallel data ports are up to 24 bits. It is designed to support 24-bit RGB888/YUV444, CCIR656 video interface, 8-bit YCbCr, YUV or RGB, and 8-bit/10-bit/16-bit Bayer data input.  |
| CSU               | Central Security Unit   | Security                          | The Central Security Unit (CSU) is responsible for setting comprehensive security policy within the i.MX 6UltraLite platform.  |

1. Note that some modules listed in this table are not offered on all derivatives. See [Table 2](#) for exceptions.

**Table 3. i.MX 6UltraLite Modules List (continued)**

| Block Mnemonic                            | Block Name  | Subsystem                     | Brief Description  |
|---|---|-------------------------------|--|
| DAP                                       | Debug Access Port   | System Control<br>Peripherals | The DAP provides real-time access for the debugger without halting the core to: <ul style="list-style-type: none"> <li>• System memory and peripheral registers</li> <li>• All debug configuration registers</li> </ul> The DAP also provides debugger access to JTAG scan chains. The DAP module is internal to the Cortex-A7 Core Platform.  |
| eCSPI1<br>eCSPI2<br>eCSPI3<br>eCSPI4      | Configurable SPI  | Connectivity<br>Peripherals   | Full-duplex enhanced Synchronous Serial Interface, with data rate up to 52 Mbit/s. It is configurable to support Master/Slave modes, four chip selects to support multiple peripherals.  |
| EIM                                       | NOR-Flash /PSRAM<br>interface                                   | Connectivity<br>Peripherals   | The EIM NOR-FLASH / PSRAM provides: <ul style="list-style-type: none"> <li>• Support 16-bit PSRAM memories (sync and async operating modes), at slow frequency</li> <li>• Support 16-bit NOR-Flash memories, at slow frequency</li> <li>• Multiple chip selects</li> </ul>   |
| EMV SIM1<br>EMV SIM2                      | Europay, Master and Visa<br>Subscriber Identification<br>Module | Connectivity<br>peripherals   | EMV SIM is designed to facilitate communication to Smart Cards compatible to the EMV version 4.3 standard (Book 1) and Smart Cards compatible with ISO/IEC 7816-3 standard.  |
| ENET1<br>ENET2                            | Ethernet Controller   | Connectivity<br>Peripherals   | The Ethernet Media Access Controller (MAC) is designed to support 10/100 Mbit/s Ethernet/IEEE 802.3 networks. An external transceiver interface and transceiver function are required to complete the interface to the media. The module has dedicated hardware to support the IEEE 1588 standard. See the ENET chapter of the reference manual for details.   |
| EPIT1<br>EPIT2                            | Enhanced Periodic<br>Interrupt Timer                            | Timer Peripherals             | Each EPIT is a 32-bit “set and forget” timer that starts counting after the EPIT is enabled by software. It is capable of providing precise interrupts at regular intervals with minimal processor intervention. It has a 12-bit prescaler for division of input clock frequency to get the required time setting for the interrupts to occur, and counter value can be programmed on the fly.   |
| FLEXCAN1<br>FLEXCAN2                      | Flexible Controller Area<br>Network                             | Connectivity<br>Peripherals   | The CAN protocol was primarily, but not only, designed to be used as a vehicle serial data bus, meeting the specific requirements of this field: real-time processing, reliable operation in the Electromagnetic interference (EMI) environment of a vehicle, cost-effectiveness and required bandwidth. The FlexCAN module is a full implementation of the CAN protocol specification, Version 2.0 B, which supports both standard and extended message frames. |
| GPIO1<br>GPIO2<br>GPIO3<br>GPIO4<br>GPIO5 | General Purpose I/O<br>Modules                                  | System Control<br>Peripherals | Used for general purpose input/output to external ICs. Each GPIO module supports up to 32 bits of I/O.   |

Table 3. i.MX 6UltraLite Modules List (continued)

| Block Mnemonic   | Block Name                       | Subsystem                | Brief Description   |
|--|----------------------------------|--------------------------|---|
| GPMI   | General Purpose Memory Interface | Connectivity Peripherals | The GPMI module supports up to 8x NAND devices and 40-bit ECC for NAND Flash Controller (GPMI2). GPMI supports separate DMA channels for each NAND device.  |
| GPT1<br>GPT2   | General Purpose Timer            | Timer peripherals        | Each GPT is a 32-bit “free-running” or “set and forget” mode timer with programmable prescaler and compare and capture register. A timer counter value can be captured using an external event and can be configured to trigger a capture event on either the leading or trailing edges of an input pulse. When the timer is configured to operate in “set and forget” mode, it is capable of providing precise interrupts at regular intervals with minimal processor intervention. The counter has output compare logic to provide the status and interrupt at comparison. This timer can be configured to run either on an external clock or on an internal clock. |
| LCDIF  | LCD interface                    | Connectivity peripherals | The LCDIF is a general purpose display controller used to drive a wide range of display devices varying in size and capability. The LCDIF is designed to support dumb (synchronous 24-bit Parallel RGB interface) and smart (asynchronous parallel MPU interface) LCD devices.  |
| MQS  | Medium Quality Sound             | Multimedia Peripherals   | MQS is used to generate 2-channel medium quality PWM-like audio via two standard digital GPIO pins.   |
| PWM1<br>PWM2<br>PWM3<br>PWM4<br>PWM5<br>PWM6<br>PWM7<br>PWM8 | Pulse Width Modulation           | Connectivity peripherals | The pulse-width modulator (PWM) has a 16-bit counter and is optimized to generate sound from stored sample audio images and it can also generate tones. It uses 16-bit resolution and a 4x16 data FIFO to generate sound.   |
| PXP  | Pixel Processing Pipeline        | Display peripherals      | A high-performance pixel processor capable of 1 pixel/clock performance for combined operations, such as color-space conversion, alpha blending, gamma-mapping, and rotation. The PXP is enhanced with features specifically for gray scale applications. In addition, the PXP supports traditional pixel/frame processing paths for still-image and video processing applications, allowing it to interface with the integrated EPD.   |

**Table 3. i.MX 6UltraLite Modules List (continued)**

| Block Mnemonic       | Block Name                 | Subsystem                  | Brief Description   |
|----------------------|----------------------------|----------------------------|---|
| QSPI                 | Quad SPI                   | Connectivity peripherals   | <p>Quad SPI module act as an interface to external serial flash devices. This module contains the following features:</p> <ul style="list-style-type: none"> <li>• Flexible sequence engine to support various flash vendor devices</li> <li>• Single pad/Dual pad/Quad pad mode of operation</li> <li>• Single Data Rate/Double Data Rate mode of operation</li> <li>• Parallel Flash mode</li> <li>• DMA support</li> <li>• Memory mapped read access to connected flash devices</li> <li>• Multi-master access with priority and flexible and configurable buffer for each master</li> </ul>   |
| SAI1<br>SAI2<br>SAI3 | —                          | —                          | The SAI module provides a synchronous audio interface (SAI) that supports full duplex serial interfaces with frame synchronization, such as I2S, AC97, TDM, and codec/DSP interfaces.   |
| SDMA                 | Smart Direct Memory Access | System Control Peripherals | <p>The SDMA is multi-channel flexible DMA engine. It helps in maximizing system performance by off-loading the various cores in dynamic data routing. It has the following features:</p> <ul style="list-style-type: none"> <li>• Powered by a 16-bit instruction-set micro-RISC engine</li> <li>• Multi-channel DMA supporting up to 32 time-division multiplexed DMA channels</li> <li>• 48 events with total flexibility to trigger any combination of channels</li> <li>• Memory accesses including linear, FIFO, and 2D addressing</li> <li>• Shared peripherals between ARM and SDMA</li> <li>• Very fast context-switching with 2-level priority based preemptive multi-tasking</li> <li>• DMA units with auto-flush and prefetch capability</li> <li>• Flexible address management for DMA transfers (increment, decrement, and no address changes on source and destination address)</li> <li>• DMA ports can handle unit-directional and bi-directional flows (copy mode)</li> <li>• Support of byte-swapping</li> <li>• Library of Scripts and API is available</li> </ul> |
| 2x SIMv2             | Smart Card                 | Connectivity peripherals   | Smart card interface compliant with ISO7816.  |

Table 3. i.MX 6UltraLite Modules List (continued)

| Block Mnemonic   | Block Name                               | Subsystem                     | Brief Description   |
|--|--|-------------------------------|---|
| SJC  | System JTAG Controller                   | System Control<br>Peripherals | The SJC provides JTAG interface, which complies with JTAG TAP standards, to internal logic. The i.MX 6UltraLite processors use JTAG port for production, testing, and system debugging. In addition, the SJC provides BSR (Boundary Scan Register) standard support, which complies with IEEE1149.1 and IEEE1149.6 standards.<br>The JTAG port must be accessible during platform initial laboratory bring-up, for manufacturing tests and troubleshooting, as well as for software debugging by authorized entities. The i.MX 6UltraLite SJC incorporates three security modes for protecting against unauthorized accesses. Modes are selected through eFUSE configuration. |
| SNVS   | Secure Non-Volatile Storage              | Security                      | Secure Non-Volatile Storage, including Secure Real Time Clock, Security State Machine, Master Key Control, and Violation/Tamper Detection and reporting.  |
| SPDIF  | Sony Philips Digital Interconnect Format | Multimedia<br>Peripherals     | A standard audio file transfer format, developed jointly by the Sony and Phillips corporations. Has Transmitter and Receiver functionality.   |
| System Counter   | —  | —                             | The system counter module is a programmable system counter which provides a shared time base to the Cortex A series cores as part of ARM's generic timer architecture. It is intended for use in application where the counter is always powered on and supports multiple, unrelated clocks.  |
| TSC  | Touch Screen                             | Touch Controller              | With touch controller to support 4-wire and 5-wire resistive touch panel.   |
| TZASC  | Trust-Zone Address Space Controller      | Security                      | The TZASC (TZC-380 by ARM) provides security address region control functions required for intended application. It is used on the path to the DRAM controller.   |
| UART1<br>UART2<br>UART3<br>UART4<br>UART5<br>UART6<br>UART7<br>UART8 | UART Interface                           | Connectivity<br>Peripherals   | Each of the UART modules support the following serial data transmit/receive protocols and configurations: <ul style="list-style-type: none"> <li>• 7- or 8-bit data words, 1 or 2 stop bits, programmable parity (even, odd or none)</li> <li>• Programmable baud rates up to 5 Mbps.</li> <li>• 32-byte FIFO on Tx and 32 half-word FIFO on Rx supporting auto-baud</li> </ul>   |

**Table 3. i.MX 6UltraLite Modules List (continued)**

| Block Mnemonic   | Block Name   | Subsystem                | Brief Description  |
|------------------|--|--------------------------|--|
| uSDHC1<br>uSDHC2 | SD/MMC and SDXC Enhanced Multi-Media Card / Secure Digital Host Controller | Connectivity Peripherals | <p>i.MX 6UltraLite specific SoC characteristics:<br/>All four MMC/SD/SDIO controller IPs are identical and are based on the uSDHC IP. They are:</p> <ul style="list-style-type: none"> <li>Fully compliant with MMC command/response sets and Physical Layer as defined in the Multimedia Card System Specification, v4.5/4.2/4.3/4.4/4.41/ including high-capacity (size &gt; 2 GB) cards HC MMC.</li> <li>Fully compliant with SD command/response sets and Physical Layer as defined in the SD Memory Card Specifications, v3.0 including high-capacity SDXC cards up to 2 TB.</li> <li>Fully compliant with SDIO command/response sets and interrupt/read-wait mode as defined in the SDIO Card Specification, Part E1, v3.0</li> </ul> <p>Two ports support:</p> <ul style="list-style-type: none"> <li>1-bit or 4-bit transfer mode specifications for SD and SDIO cards up to UHS-I SDR104 mode (104 MB/s max)</li> <li>1-bit, 4-bit, or 8-bit transfer mode specifications for MMC cards up to 52 MHz in both SDR and DDR modes (104 MB/s max)</li> <li>4-bit or 8-bit transfer mode specifications for eMMC chips up to 200 MHz in HS200 mode (200 MB/s max)</li> </ul> |
| USB              | Universal Serial Bus 2.0   | Connectivity Peripherals | <p>USBO2 (USB OTG1 and USB OTG2) contains:</p> <ul style="list-style-type: none"> <li>Two high-speed OTG 2.0 modules with integrated HS USB PHYs</li> <li>Support eight Transmit (TX) and eight Receive (Rx) endpoints, including endpoint 0</li> </ul>  |
| WDOG1<br>WDOG3   | Watch Dog  | Timer Peripherals        | <p>The Watch Dog Timer supports two comparison points during each counting period. Each of the comparison points is configurable to evoke an interrupt to the ARM core, and a second point evokes an external event on the WDOG line.</p>  |
| WDOG2 (TZ)       | Watch Dog (TrustZone)  | Timer Peripherals        | <p>The TrustZone Watchdog (TZ WDOG) timer module protects against TrustZone starvation by providing a method of escaping normal mode and forcing a switch to the TZ mode. TZ starvation is a situation where the normal OS prevents switching to the TZ mode. Such situation is undesirable as it can compromise the system's security. Once the TZ WDOG module is activated, it must be serviced by TZ software on a periodic basis. If servicing does not take place, the timer times out. Upon a time-out, the TZ WDOG asserts a TZ mapped interrupt that forces switching to the TZ mode. If it is still not served, the TZ WDOG asserts a security violation signal to the CSU. The TZ WDOG module cannot be programmed or deactivated by a normal mode SW.</p>   |

### 3.1 Special Signal Considerations

Table 4 lists special signal considerations for the i.MX 6UltraLite processors. The signal names are listed in alphabetical order.

The package contact assignments can be found in Section 6, “Package Information and Contact Assignments.” Signal descriptions are provided in the *i.MX 6UltraLite Reference Manual* (IMX6ULRM).

**Table 4. Special Signal Considerations**

| Signal Name               | Remarks  |
|---------------------------|--|
| CCM_CLK1_P/<br>CCM_CLK1_N | <p>One general purpose differential high speed clock Input/output is provided. It can be used:</p> <ul style="list-style-type: none"> <li>• To feed external reference clock to the PLLs and further to the modules inside SoC.</li> <li>• To output internal SoC clock to be used outside the SoC as either reference clock or as a functional clock for peripherals.</li> </ul> <p>See the <i>i.MX 6UltraLite Reference Manual</i> (IMX6ULRM) for details on the respective clock trees. Alternatively one may use single ended signal to drive CLK1_P input. In this case corresponding CLK1_N input should be tied to the constant voltage level equal 1/2 of the input signal swing. Termination should be provided in case of high frequency signals. After initialization, the CLK1 input/output can be disabled (if not used). If unused either or both of the CLK1_N/P pairs may be left floating.</p>  |
| RTC_XTALI/RTC_XTALO       | <p>If the user wishes to configure RTC_XTALI and RTC_XTALO as an RTC oscillator, a 32.768 kHz crystal, (<math>\leq 100</math> k<math>\Omega</math> ESR, 10 pF load) should be connected between RTC_XTALI and RTC_XTALO. Keep in mind the capacitors implemented on either side of the crystal are about twice the crystal load capacitor. To hit the exact oscillation frequency, the board capacitors need to be reduced to account for board and chip parasitics. The integrated oscillation amplifier is self biasing, but relatively weak. Care must be taken to limit parasitic leakage from RTC_XTALI and RTC_XTALO to either power or ground (<math>&gt;100</math> M<math>\Omega</math>). This will debias the amplifier and cause a reduction of startup margin. Typically RTC_XTALI and RTC_XTALO should bias to approximately 0.5 V. If it is desired to feed an external low frequency clock into RTC_XTALI the RTC_XTALO pin should be left floating or driven with a complimentary signal. The logic level of this forcing clock should not exceed VDD_SNVS_CAP level and the frequency should be <math>&lt;100</math> kHz under typical conditions. In case when high accuracy real time clock are not required system may use internal low frequency ring oscillator. It is recommended to connect RTC_XTALI to GND and keep RTC_XTALO floating.</p> |
| XTALI/XTALO               | <p>A 24.0 MHz crystal should be connected between XTALI and XTALO. The crystal must be rated for a maximum drive level of 250 <math>\mu</math>W. An ESR (equivalent series resistance) of typical 80 <math>\Omega</math> is recommended. Freescale BSP (board support package) software requires 24 MHz on XTALI/XTALO. The crystal can be eliminated if an external 24 MHz oscillator is available in the system. In this case, XTALO must be directly driven by the external oscillator and XTALI mounted with 18 pF capacitor. Please refer to the EVK board reference design for details. The logic level of this forcing clock cannot exceed NVCC_PLL level. If this clock is used as a reference for USB, then there are strict frequency tolerance and jitter requirements. See OSC24M chapter and relevant interface specifications chapters for details.</p>  |
| DRAM_VREF                 | <p>When using DDR_VREF with DDR I/O, the nominal reference voltage must be half of the NVCC_DRAM supply. The user can tie DDR_VREF to a precision external resistor divider. Use a 1 k<math>\Omega</math> 0.5% resistor to GND and a 1 k<math>\Omega</math> 0.5% resistor to NVCC_DRAM. Shunt each resistor with a closely-mounted 0.1 <math>\mu</math>F capacitor. To reduce supply current, a pair of 1.5 k<math>\Omega</math> 0.1% resistors can be used. Using resistors with recommended tolerances ensures the <math>\pm 2\%</math> DDR_VREF tolerance (per the DDR3 specification) is maintained when two DDR3 ICs plus the i.MX 6UltraLite are drawing current on the resistor divider.</p>  |

**Table 4. Special Signal Considerations (continued)**

| Signal Name | Remarks   |
|-------------|---|
| ZQPAD       | DRAM calibration resistor 240 Ω 1% used as reference during DRAM output buffer driver calibration should be connected between this pad and GND.   |
| GPANAIO     | This signal is reserved for Freescale manufacturing use only. User must leave this connection floating.   |
| JTAG_nnnn   | <p>The JTAG interface is summarized in <a href="#">Table 5</a>. Use of external resistors is unnecessary. However, if external resistors are used, the user must ensure that the on-chip pull-up/down configuration is followed. For example, do not use an external pull down on an input that has on-chip pull-up.</p> <p>JTAG_TDO is configured with a keeper circuit such that the floating condition is eliminated if an external pull resistor is not present. An external pull resistor on JTAG_TDO is detrimental and should be avoided.</p> <p>JTAG_MOD is referenced as SJC_MOD in the i.MX 6UltraLite reference manual. Both names refer to the same signal. JTAG_MOD must be externally connected to GND for normal operation. Termination to GND through an external pull-down resistor (such as 1 kΩ) is allowed. JTAG_MOD set to hi configures the JTAG interface to mode compliant with IEEE1149.1 standard. JTAG_MOD set to low configures the JTAG interface for common SW debug adding all the system TAPs to the chain.</p> |
| NC          | These signals are No Connect (NC) and should be floated by the user.  |
| POR_B       | This cold reset negative logic input resets all modules and logic in the IC. May be used in addition to internally generated power on reset signal (logical AND, both internal and external signals are considered active low).   |
| ONOFF       | ONOFF can be configured in debounce, off to on time, and max time-out configurations. The debounce and off to on time configurations supports 0, 50, 100 and 500 ms. Debounce is used to generate the power off interrupt. While in the ON state, if ONOFF button is pressed longer than the debounce time, the power off interrupt is generated. Off to on time supports the time it takes to request power on after a configured button press time has been reached. While in the OFF state, if ONOFF button is pressed longer than the off to on time, the state will transition from OFF to ON. Max time-out configuration supports 5, 10, 15 seconds and disable. Max time-out configuration supports the time it takes to request power down after ONOFF button has been pressed for the defined time.  |
| TEST_MODE   | TEST_MODE is for Freescale factory use. The user must tie this pin directly to GND.   |

**Table 5. JTAG Controller Interface Summary**

| JTAG       | I/O Type       | On-chip Termination |
|------------|----------------|---------------------|
| JTAG_TCK   | Input          | 47 kΩ pull-up       |
| JTAG_TMS   | Input          | 47 kΩ pull-up       |
| JTAG_TDI   | Input          | 47 kΩ pull-up       |
| JTAG_TDO   | 3-state output | Keeper              |
| JTAG_TRSTB | Input          | 47 kΩ pull-up       |
| JTAG_MOD   | Input          | 100 kΩ pull-up      |

## 3.2 Recommended Connections for Unused Analog Interfaces

Table 6 shows the recommended connections for unused analog interfaces.

**Table 6. Recommended Connections for Unused Analog Interfaces**

| Module | Pad Name  | Recommendations if Unused  |
|--------|---|--|
| CCM    | CCM_CLK1_N, CCM_CLK1_P  | Float  |
| USB    | USB_OTG1_CHD_B, USB_OTG1_DN, USB_OTG1_DP, USB_OTG1_VBUS,<br>USB_OTG2_CHD_B, USB_OTG2_DN, USB_OTG2_DP, USB_OTG2_VBUS | Float  |
| ADC    | ADC_VREFH   | Tie to<br>VDDA_ADC_3P3   |
|        | VDDA_ADC_3P3  | VDDA_ADC_3P3<br>must be powered<br>even if the ADC is<br>not used. |

## 4 Electrical Characteristics

This section provides the device and module-level electrical characteristics for the i.MX 6UltraLite processors.

### 4.1 Chip-Level Conditions

This section provides the device-level electrical characteristics for the IC. See [Table 7](#) for a quick reference to the individual tables and sections.

**Table 7. i.MX 6UltraLite Chip-Level Conditions**

| For these characteristics                      | Topic appears              |
|--|----------------------------|
| <a href="#">Absolute Maximum Ratings</a>       | <a href="#">on page 20</a> |

#### 4.1.1 Absolute Maximum Ratings

#### CAUTION

Stress beyond those listed under [Table 8](#) may cause permanent damage to the device. These are stress ratings only. Functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

**Table 8. Absolute Maximum Ratings**

| Parameter Description                      | Symbol                     | Min  | Max  | Unit |
|--|----------------------------|------|------|------|
| Core Supplies Input Voltage (LDO Enabled)  | VDD_SOC_IN                 | -0.3 | 1.6  | V    |
| Core Supplies Input Voltage (LDO Bypass)   | VDD_SOC_IN                 | -0.3 | 1.4  | V    |
| VDD_HIGH_IN Supply voltage (LDO Enabled)   | VDD_HIGH_IN                | -0.3 | 3.7  | V    |
| VDD_HIGH_IN Supply voltage (LDO Bypass)    | VDD_HIGH_IN                | -0.3 | 2.85 | V    |
| Core Supplies Output Voltage (LDO Enabled) | VDD_ARM_CAP<br>VDD_SOC_CAP | -0.3 | 1.4  | V    |

**Table 8. Absolute Maximum Ratings (continued)**

|   |   |      |                       |    |
|---|---|------|-----------------------|----|
| VDD_HIGH_CAP LDO Output Supply Voltage                                  | VDD_HIGH_CAP  | -0.3 | 2.6                   | V  |
| Supply Input Voltage to Secure Non-Volatile Storage and Real Time Clock | VDD_SNVIS_IN  | -0.3 | 3.4                   |    |
| USB VBUS Supply   | USB_OTG_VBUS  | —    | 5.35                  | V  |
| IO Supply for DDR Interface   | NVCC_DRAM   | -0.4 | 1.675                 | V  |
| Supply for DDR pre-drivers  | NVCC_DRAM_2P5   | -0.3 | 2.85                  | V  |
| IO Supply for GPIO Type Pins  | NVCC_CSI<br>NVCC_ENET<br>NVCC_GPIO<br>NVCC_LCD<br>NVCC_NAND<br>NVCC_SD1 | -0.5 | 3.7                   | V  |
| Supply for ADC 3P3V   | VDDA_ADC_3P3  | —    | 3.7                   | V  |
| Input/Output Voltage range  | V <sub>in/Vout</sub>  | -0.5 | OVDD+0.3 <sup>1</sup> | V  |
| Storage Temperature range   | TSTORAGE  | -40  | 150                   | °C |

<sup>1</sup> OVDD is the I/O supply voltage.

## 4.1.2 Thermal Resistance

### 4.1.2.1 14x14 MM (VM) Package Thermal Resistance

Table 9 displays the 14x14 MM (VM) package thermal resistance data.

**Table 9. 14x14 MM (VM) Thermal Resistance Data<sup>1</sup>**

| Rating                                    | Test Conditions         | Symbol            | Value | Unit | Notes |
|---|-------------------------|-------------------|-------|------|-------|
| Junction to Ambient<br>Natural convection | Single-layer board (1s) | R <sub>θJA</sub>  | 58.4  | °C/W | 2,3   |
| Junction to Ambient<br>Natural convection | Four-layer board (2s2p) | R <sub>θJA</sub>  | 37.6  | °C/W | 2,3,4 |
| Junction to Ambient (@200<br>ft/min)      | Single layer board (1s) | R <sub>θJMA</sub> | 48.6  | °C/W | 2,4   |
| Junction to Ambient (@200<br>ft/min)      | Four layer board (2s2p) | R <sub>θJMA</sub> | 32.9  | °C/W | 2,4   |
| Junction to Board                         | —                       | R <sub>θJB</sub>  | 21.8  | °C/W | 5     |
| Junction to Case                          | —                       | R <sub>θJC</sub>  | 19.3  | °C/W | 6     |
| Junction to Package Top                   | Natural Convection      | Ψ <sub>JT</sub>   | 2.3   | °C/W | 7     |
| Junction to Package Bottom                | Natural Convection      | Ψ <sub>JB</sub>   | 12.0  | °C/W | 8     |

<sup>1</sup> As per JEDEC JESD51-2 the intent of (thermal resistance) measurement is solely for a thermal performance comparison of one package to another in a standardized environment. This methodology is not meant to and will not predict the performance of a package in an application-specific environment.

## Electrical Characteristics

- 2 Junction temperature is a function of die size, on-chip power dissipation, package thermal resistance, mounting site (board) temperature, ambient temperature, air flow, power dissipation of other components on the board, and board thermal resistance.
- 3 Per SEMI G38-87 and JEDEC JESD51-2 with the single layer board horizontal.
- 4 Per JEDEC JESD51-6 with the board horizontal.
- 5 Thermal resistance between the die and the printed circuit board per JEDEC JESD51-8. Board temperature is measured on the top surface of the board near the package.
- 6 Thermal resistance between the die and the case top surface as measured by the cold plate method (MIL SPEC-883 Method 1012.1).
- 7 Thermal characterization parameter indicating the temperature difference between package top and the junction temperature per JEDEC JESD51-2. When Greek letters are not available, the thermal characterization parameter is written as Psi-JT.
- 8 Thermal characterization parameter indicating the temperature difference between package bottom center and the junction temperature per JEDEC JESD51-12. When Greek letters are not available, the thermal characterization parameter is written as Psi-JB

### 4.1.2.2 9x9 MM (VK) Package Thermal Resistance

Table 10 displays the 9x9 MM (VK) thermal resistance data.

**Table 10. 9x9 MM (VK) Thermal Resistance Data**

| Rating                                    | Test Conditions         | Symbol           | Value | Unit                        | Notes |
|---|-------------------------|------------------|-------|-----------------------------|-------|
| Junction to Ambient<br>Natural Convection | Single-layer board (1s) | $R_{\theta JA}$  | 65.6  | $^{\circ}\text{C}/\text{W}$ | 1,2   |
| Junction to Ambient<br>Natural Convection | Four-layer board (2s2p) | $R_{\theta JA}$  | 36.2  | $^{\circ}\text{C}/\text{W}$ | 2,2,3 |
| Junction to Ambient (@200<br>ft/min)      | Single layer board (1s) | $R_{\theta JMA}$ | 51.2  | $^{\circ}\text{C}/\text{W}$ | 2,3   |
| Junction to Ambient (@200<br>ft/min)      | Four layer board (2s2p) | $R_{\theta JMA}$ | 31.8  | $^{\circ}\text{C}/\text{W}$ | 2,3   |
| Junction to Board                         | —                       | $R_{\theta JB}$  | 17.1  | $^{\circ}\text{C}/\text{W}$ | 4     |
| Junction to Case                          | —                       | $R_{\theta JC}$  | 14.5  | $^{\circ}\text{C}/\text{W}$ | 5     |
| Junction to Package Top                   | Natural Convection      | $\Psi_{JT}$      | 0.6   | $^{\circ}\text{C}/\text{W}$ | 6     |
| Junction to Package Bottom                | Natural Convection      | $\Psi_{JB\_CSB}$ | 11.1  | $^{\circ}\text{C}/\text{W}$ | 7     |

- 1 Junction temperature is a function of die size, on-chip power dissipation, package thermal resistance, mounting site (board) temperature, ambient temperature, air flow, power dissipation of other components on the board, and board thermal resistance.
- 2 Per SEMI G38-87 and JEDEC JESD51-2 with the single layer board horizontal.
- 3 Per JEDEC JESD51-6 with the board horizontal.
- 4 Thermal resistances between the die and the printed circuit board per JEDEC JESD51-8. Board temperature is measured on the top surface of the board near the package.
- 5 Thermal resistance between the die and the case top surface as measured by the cold plate method (MIL SPEC-883 Method 1012.1).
- 6 Thermal characterization parameter indicating the temperature difference between package top and the junction temperature per JEDEC JESD51-2. When Greek letters are not available, the thermal characterization parameter is written as Psi-JT.
- 7 Thermal resistance between the die and the central solder balls on the bottom of the package based on simulation.

### 4.1.3 Operating Ranges

Table 11 provides the operating ranges of the i.MX 6UltraLite processors. For details on the chip's power structure, see the “Power Management Unit (PMU)” chapter of the *i.MX 6UltraLite Reference Manual* (IMX6ULRM).

Table 11. Operating Ranges

| Parameter Description       | Symbol                   | Operating Conditions                  | Min   | Typ  | Max <sup>1</sup> | Unit | Comment  |
|-----------------------------|--------------------------|---------------------------------------|-------|------|------------------|------|--|
| Run Mode: LDO Enabled       | VDD_SOC_IN               | —                                     | 1.275 | —    | 1.5              | V    | VDD_SOC_IN must be 125 mV higher than the LDO Output Set Point (VDD_ARM_CAP and VDD_SOC_CAP) for correct supply voltage regulation.  |
|                             | VDD_ARM_CAP              | A7 core at 528 MHz                    | 1.15  | —    | 1.3              | V    | Output voltage must be set to the following rules:<br><ul style="list-style-type: none"> <li>• VDD_ARM_CAP &lt;= VDD_SOC_CAP</li> <li>• VDD_SOC_CAP - VDD_ARM_CAP &lt; 330 mV</li> </ul> |
|                             |                          | A7 core at 396 MHz                    | 1.00  | —    | 1.3              |      |  |
|                             |                          | A7 core at 198 MHz                    | 0.925 | —    | 1.3              |      |  |
| VDD_SOC_CAP                 | —                        | 1.15                                  | —     | 1.3  | V                | —    |  |
| Run Mode: LDO Bypassed      | VDD_SOC_IN               | A7 core operation at 528 MHz or below | 1.15  | —    | 1.3              | V    | A7 core operation above 528 MHz is not supported when LDO is bypassed.   |
| SUSPEND (DSM) Mode          | VDD_SOC_IN               | —                                     | 0.90  | —    | 1.3              | V    | Refer to <a href="#">Table 15 Low Power Mode Current and Power Consumption on page 15</a>  |
| VDD_HIGH internal Regulator | VDD_HIGH_IN              | —                                     | 2.80  | —    | 3.6              | V    | Must match the range of voltages that the rechargeable backup battery supports.  |
| Backup battery supply range | VDD_SNVS_IN <sup>2</sup> | —                                     | 2.40  | —    | 3.6              | V    | Can be combined with VDDHIGH_IN, if the system does not require keeping real time and other data on OFF state.   |
| USB supply voltages         | USB_OTG1_VBUS            | —                                     | 4.40  | —    | 5.5              | V    | —  |
|                             | USB_OTG2_VBUS            | —                                     | 4.40  | —    | 5.5              | V    | —  |
| DDR I/O supply              | NVCC_DRAM                | LPDDR2                                | 1.14  | 1.2  | 1.3              | V    | —  |
|                             |                          | DDR3L                                 | 1.28  | 1.35 | 1.45             | V    | —  |
|                             |                          | DDR3                                  | 1.43  | 1.5  | 1.575            | V    | —  |
|                             | NVCC_DRAM2P5             | —                                     | 2.25  | 2.5  | 2.75             | V    | —  |

**Table 11. Operating Ranges (continued)**

|                              |                |            |      |                     |     |    |   |
|------------------------------|----------------|------------|------|---------------------|-----|----|---|
| GPIO supplies                | NVCC_CSI       | —          | 1.65 | 1.8,<br>2.8,<br>3.3 | 3.6 | V  | All digital I/O supplies (NVCC_xxxx) must be powered (unless otherwise specified in this data sheet) under normal conditions whether the associated I/O pins are in use or not. |
|                              | NVCC_ENET      |            |      |                     |     |    |   |
|                              | NVCC_GPIO      |            |      |                     |     |    |   |
|                              | NVCC_UART      |            |      |                     |     |    |   |
|                              | NVCC_LCD       |            |      |                     |     |    |   |
|                              | NVCC_NAND      |            |      |                     |     |    |   |
|                              | NVCC_SD1       |            |      |                     |     |    |   |
| A/D converter                | VDDA_ADC_3P3   | —          | 3.0  | 3.15                | 3.6 | V  | VDDA_ADC_3P3 must be powered even if the ADC is not used.<br>VDDA_ADC_3P3 cannot be powered when the other SoC supplies (except VDD_SNVS_IN) are off.                           |
| Temperature Operating Ranges |                |            |      |                     |     |    |   |
| Junction temperature         | T <sub>j</sub> | Industrial | -40  | —                   | 105 | °C | See the application note, i.MX 6UltraLite Product Lifetime Usage Estimates for information on product lifetime (power-on years) for this processor.                             |

<sup>1</sup> Applying the maximum voltage results in maximum power consumption and heat generation. Freescale recommends a voltage set point = (V<sub>min</sub> + the supply tolerance). This result in an optimized power/speed ratio.

<sup>2</sup> In setting VDD\_SNVS\_IN voltage with regards to Charging Currents and RTC, refer to the *i.MX 6UltraLite Hardware Development Guide* (IMX6ULHDG).

Table 12 shows on-chip LDO regulators that can supply on-chip loads.

**Table 12. On-Chip LDOs<sup>1</sup> and their On-Chip Loads**

| Voltage Source | Load          | Comment                                |
|----------------|---------------|--|
| VDD_HIGH_CAP   | NVCC_DRAM_2P5 | Board-level connection to VDD_HIGH_CAP |

<sup>1</sup> On-chip LDOs are designed to supply i.MX6UltraLite loads and must not be used to supply external loads.

### 4.1.4 External Clock Sources

Each i.MX 6UltraLite processor has two external input system clocks: a low frequency (RTC\_XTALI) and a high frequency (XTALI).

The RTC\_XTALI is used for low-frequency functions. It supplies the clock for wake-up circuit, power-down real time clock operation, and slow system and watch-dog counters. The clock input can be connected to either external oscillator or a crystal using internal oscillator amplifier. Additionally, there is an internal ring oscillator, which can be used instead of the RTC\_XTALI if accuracy is not important.

The system clock input XTALI is used to generate the main system clock. It supplies the PLLs and other peripherals. The system clock input can be connected to either external oscillator or a crystal using internal oscillator amplifier.

Table 13 shows the interface frequency requirements.

**Table 13. External Input Clock Frequency**

| Parameter Description               | Symbol     | Min | Typ                       | Max | Unit |
|-------------------------------------|------------|-----|---------------------------|-----|------|
| RTC_XTALI Oscillator <sup>1,2</sup> | $f_{ckil}$ | —   | 32.768 <sup>3</sup> /32.0 | —   | kHz  |
| XTALI Oscillator <sup>2,4</sup>     | $f_{xtal}$ | —   | 24                        | —   | MHz  |

<sup>1</sup> External oscillator or a crystal with internal oscillator amplifier.

<sup>2</sup> The required frequency stability of this clock source is application dependent. For recommendations, see the Hardware Development Guide for *i.MX 6UltraLite Applications Processors (IMX6ULHDG)*.

<sup>3</sup> Recommended nominal frequency 32.768 kHz.

<sup>4</sup> External oscillator or a fundamental frequency crystal with internal oscillator amplifier.

The typical values shown in Table 13 are required for use with Freescale BSPs to ensure precise time keeping and USB operation. For RTC\_XTALI operation, two clock sources are available.

- On-chip 40 kHz ring oscillator—this clock source has the following characteristics:
  - Approximately 25  $\mu$ A more  $I_{dd}$  than crystal oscillator
  - Approximately  $\pm 50\%$  tolerance
  - No external component required
  - Starts up quicker than 32 kHz crystal oscillator
- External crystal oscillator with on-chip support circuit:
  - At power up, ring oscillator is utilized. After crystal oscillator is stable, the clock circuit switches over to the crystal oscillator automatically.
  - Higher accuracy than ring oscillator
  - If no external crystal is present, then the ring oscillator is utilized

The decision of choosing a clock source should be taken based on real-time clock use and precision time-out.

#### 4.1.5 Maximum Supply Currents

The data shown in Table 14 represent a use case designed specifically to show the maximum current consumption possible. All cores are running at the defined maximum frequency and are limited to L1 cache accesses only to ensure no pipeline stalls. Although a valid condition, it would have a very limited practical use case, if at all, and be limited to an extremely low duty cycle unless the intention was to specifically show the worst case power consumption.

## Electrical Characteristics

See the i.MX 6UltraLite Power Consumption Measurement Application Note (AN5170) for more details on typical power consumption under various use case definitions.

**Table 14. Maximum Supply Currents**

| Power Line                             | Conditions                                | Max Current                          | Unit |
|--|---|--------------------------------------|------|
| VDD_SOC_IN                             | 528 MHz ARM clock based on Dhrystone test | 500                                  | mA   |
| VDD_HIGH_IN                            | —   | 125 <sup>1</sup>                     | mA   |
| VDD_SNVS_IN                            | —   | 500 <sup>2</sup>                     | μA   |
| USB_OTG1_VBUS<br>USB_OTG2_VBUS         | —   | 50 <sup>3</sup>                      | mA   |
| VDDA_ADC_3P3                           | 100 Ohm maximum loading for touch panel   | 35                                   | mA   |
| <b>Primary Interface (IO) Supplies</b> |   |                                      |      |
| NVCC_DRAM                              | —   | (See <sup>4</sup> )                  | —    |
| NVCC_DRAM_2P5                          | —   | 50                                   | mA   |
| NVCC_GPIO                              | N=16                                      | Use maximum IO Equation <sup>5</sup> | —    |
| NVCC_UART                              | N=16                                      | Use maximum IO equation <sup>5</sup> | —    |
| NVCC_ENET                              | N=16                                      | Use maximum IO equation <sup>5</sup> | —    |
| NVCC_LCD                               | N=29                                      | Use maximum IO equation <sup>5</sup> | —    |
| NVCC_NAND                              | N=17                                      | Use maximum IO equation <sup>5</sup> | —    |
| NVCC_SD1                               | N=6                                       | Use maximum IO equation <sup>5</sup> | —    |
| NVCC_CSI                               | N=12                                      | Use maximum IO equation <sup>5</sup> | —    |
| <b>MISC</b>                            |   |                                      |      |
| DRAM_VREF                              | —   | 1                                    | mA   |

<sup>1</sup> The actual maximum current drawn from VDD\_HIGH\_IN will be as shown plus any additional current drawn from the VDD\_HIGH\_CAP outputs, depending upon actual application configuration (for example, NVCC\_DRAM\_2P5 supplies).

<sup>2</sup> The maximum VDD\_SNVS\_IN current may be higher depending on specific operating configurations, such as BOOT\_MODE[1:0] not equal to 00, or use of the Tamper feature. During initial power on, VDD\_SNVS\_IN can draw up to 1 mA, if available. VDD\_SNVS\_CAP charge time will increase if less than 1 mA is available.

<sup>3</sup> This is the maximum current per active USB physical interface.

<sup>4</sup> The DRAM power consumption is dependent on several factors, such as external signal termination. DRAM power calculators are typically available from the memory vendors. They take in account factors, such as signal termination. See the *i.MX 6UltraLite Power Consumption Measurement Application Note (AN5170)* or examples of DRAM power consumption during specific use case scenarios.

<sup>5</sup> General equation for estimated, maximum power consumption of an IO power supply:

$$I_{max} = N \times C \times V \times (0.5 \times F)$$

Where:

N—Number of IO pins supplied by the power line

C—Equivalent external capacitive load

V—IO voltage

(0.5 xF)—Data change rate. Up to 0.5 of the clock rate (F)

In this equation, I<sub>max</sub> is in Amps, C in Farads, V in Volts, and F in Hertz.

## 4.1.6 Low Power Mode Supply Currents

Table 15 shows the current core consumption (not including I/O) of i.MX 6UltraLite processors in selected low power modes.

**Table 15. Low Power Mode Current and Power Consumption**

| Mode                            | Test Conditions   | Supply               | Typical <sup>1</sup> | Units |
|---------------------------------|---|----------------------|----------------------|-------|

## 4.1.7 USB PHY Current Consumption

### 4.1.7.1 Power Down Mode

In power down mode, everything is powered down, including the USB VBUS valid detectors in typical condition. [Table 16](#) shows the USB interface current consumption in power down mode.

**Table 16. USB PHY Current Consumption in Power Down Mode**

|         | VDD_USB_CAP (3.0 V) | VDD_HIGH_CAP (2.5 V) | NVCC_PLL (1.1 V) |
|---------|---------------------|----------------------|------------------|
| Current | 5.1 $\mu$ A         | 1.7 $\mu$ A          | < 0.5 $\mu$ A    |

#### NOTE

The currents on the VDD\_HIGH\_CAP and VDD\_USB\_CAP were identified to be the voltage divider circuits in the USB-specific level shifters.

## 4.2 Power Supplies Requirements and Restrictions

The system design must comply with power-up sequence, power-down sequence, and steady state guidelines as described in this section to guarantee the reliable operation of the device. Any deviation from these sequences may result in the following situations:

- Excessive current during power-up phase
- Prevention of the device from booting
- Irreversible damage to the processor (worst-case scenario)

### 4.2.1 Power-Up Sequence

The below restrictions must be followed:

- VDD\_SNVS\_IN supply must be turned on before any other power supply or be connected (shorted) with VDD\_HIGH\_IN supply.
- If a coin cell is used to power VDD\_SNVS\_IN, then ensure that it is connected before any other supply is switched on.
- VDD\_HIGH\_IN should be turned on before VDD\_SOC\_IN.

**NOTE**

The POR\_B input (if used) must be immediately asserted at power-up and remain asserted until after the last power rail reaches its working voltage. In the absence of an external reset feeding the POR\_B input, the internal POR module takes control. See the *i.MX 6UltraLite Reference Manual* (IMX6ULRM) for further details and to ensure that all necessary requirements are being met.

**NOTE**

Need to ensure that there is no back voltage (leakage) from any supply on the board towards the 3.3 V supply (for example, from the external components that use both the 1.8 V and 3.3 V supplies).

**NOTE**

USB\_OTG1\_VBUS, USB\_OTG2\_VBUS, and VDDA\_ADC\_3P3 are not part of the power supply sequence and may be powered at any time.

#### 4.2.2 Power-Down Sequence

The following restrictions must be followed:

- VDD\_SNVS\_IN supply must be turned off after any other power supply or be connected (shorted) with VDD\_HIGH\_IN supply.
- If a coin cell is used to power VDD\_SNVS\_IN, then ensure that it is removed after any other supply is switched off.

**NOTE**

VDD\_HIGH\_IN should be turned off after VDD\_SOC\_IN is switched off.

#### 4.2.3 Power Supplies Usage

All I/O pins should not be externally driven while the I/O power supply for the pin (NVCC\_XXX) is OFF. This can cause internal latch-up and malfunctions due to reverse current flows. For information about I/O power supply of each pin, see “Power Rail” columns in pin list tables of [Section 6, “Package Information and Contact Assignments.”](#)

### 4.3 Integrated LDO Voltage Regulator Parameters

Various internal supplies can be powered ON from internal LDO voltage regulators. All the supply pins named \*\_CAP must be connected to external capacitors. The onboard LDOs are intended for internal use only and should not be used to power any external circuitry. See the *i.MX 6UltraLite Reference Manual* (IMX6ULRM) for details on the power tree scheme.

**NOTE**

The \*\_CAP signals should not be powered externally. These signals are intended for internal LDO operation only.

### 4.3.1 Digital Regulators (LDO\_ARM, LDO\_SOC)

There are two digital LDO regulators (“Digital”, because of the logic loads that they drive, not because of their construction). The advantages of the regulators are to reduce the input supply variation because of their input supply ripple rejection and their on-die trimming. This translates into more stable voltage for the on-chip logics.

These regulators have two basic modes:

- Power Gate. The regulation FET is switched fully off limiting the current draw from the supply. The analog part of the regulator is powered down here limiting the power consumption.
- Analog regulation mode. The regulation FET is controlled such that the output voltage of the regulator equals the programmed target voltage. The target voltage is fully programmable in 25 mV steps.

For additional information, see the *i.MX 6UltraLite Reference Manual* (IMX6ULRM).

### 4.3.2 Regulators for Analog Modules

#### 4.3.2.1 LDO\_1P1

The LDO\_1P1 regulator implements a programmable linear-regulator function from VDD\_HIGH\_IN (see [Table 11](#) for minimum and maximum input requirements). Typical Programming Operating Range is 1.0 V to 1.2 V with the nominal default setting as 1.1 V. The LDO\_1P1 supplies the USB Phy, and PLLs. A programmable brown-out detector is included in the regulator that can be used by the system to determine when the load capability of the regulator is being exceeded to take the necessary steps. Current-limiting can be enabled to allow for in-rush current requirements during start-up, if needed. Active-pull-down can also be enabled for systems requiring this feature.

For information on external capacitor requirements for this regulator, see the Hardware Development Guide for *i.MX 6UltraLite Applications Processors* (IMX6ULHDG).

For additional information, see the *i.MX 6UltraLite Reference Manual* (IMX6ULRM).

#### 4.3.2.2 LDO\_2P5

The LDO\_2P5 module implements a programmable linear-regulator function from VDD\_HIGH\_IN (see [Table 11](#) for minimum and maximum input requirements). Typical Programming Operating Range is 2.25 V to 2.75 V with the nominal default setting as 2.5 V. LDO\_2P5 supplies the DDR IOs, USB Phy, E-fuse module, and PLLs. A programmable brown-out detector is included in the regulator that can be used by the system to determine when the load capability of the regulator is being exceeded, to take the necessary steps. Current-limiting can be enabled to allow for in-rush current requirements during start-up, if needed. Active-pull-down can also be enabled for systems requiring this feature. An alternate self-biased low-precision weak-regulator is included that can be enabled for applications needing to keep the output voltage alive during low-power modes where the main regulator driver and its associated global bandgap reference module are disabled. The output of the weak-regulator is not programmable and is a function of the input supply as well as the load current. Typically, with a 3 V input supply the weak-regulator output is 2.525 V and its output impedance is approximately 40  $\Omega$ .

For information on external capacitor requirements for this regulator, see the Hardware Development Guide for *i.MX 6UltraLite Applications Processors* (IMX6ULHDG).

For additional information, see the *i.MX 6UltraLite Reference Manual* (IMX6ULRM).

### 4.3.2.3 LDO\_USB

The LDO\_USB module implements a programmable linear-regulator function from the USB VUSB voltages (4.4 V–5.5 V) to produce a nominal 3.0 V output voltage. A programmable brown-out detector is included in the regulator that can be used by the system to determine when the load capability of the regulator is being exceeded, to take the necessary steps. This regulator has a built in power-mux that allows the user to select to run the regulator from either USB VBUS supply, when both are present. If only one of the USB VBUS voltages is present, then, the regulator automatically selects this supply. Current limit is also included to help the system meet in-rush current targets.

For information on external capacitor requirements for this regulator, see the *Hardware Development Guide for i.MX 6UltraLite Applications Processors* (IMX6ULHDG).

For additional information, see the *i.MX 6UltraLite Reference Manual* (IMX6ULRM).

## 4.4 PLL's Electrical Characteristics

### 4.4.1 Audio/Video PLL's Electrical Parameters

Table 17. Audio/Video PLL's Electrical Parameters

| Parameter          | Value                   |
|--------------------|-------------------------|
| Clock output range | 650 MHz ~1.3 GHz        |
| Reference clock    | 24 MHz                  |
| Lock time          | <11250 reference cycles |

### 4.4.2 528 MHz PLL

Table 18. 528 MHz PLL's Electrical Parameters

| Parameter          | Value                   |
|--------------------|-------------------------|
| Clock output range | 528 MHz PLL output      |
| Reference clock    | 24 MHz                  |
| Lock time          | <11250 reference cycles |

### 4.4.3 Ethernet PLL

Table 19. Ethernet PLL's Electrical Parameters

| Parameter          | Value                   |
|--------------------|-------------------------|
| Clock output range | 500 MHz                 |
| Reference clock    | 24 MHz                  |
| Lock time          | <11250 reference cycles |

### 4.4.4 480 MHz PLL

Table 20. 480 MHz PLL's Electrical Parameters

| Parameter          | Value                 |
|--------------------|-----------------------|
| Clock output range | 480 MHz PLL output    |
| Reference clock    | 24 MHz                |
| Lock time          | <383 reference cycles |

### 4.4.5 ARM PLL

Table 21. ARM PLL's Electrical Parameters

| Parameter          | Value                  |
|--------------------|------------------------|
| Clock output range | 648 MHz ~ 1296 MHz     |
| Reference clock    | 24 MHz                 |
| Lock time          | <2250 reference cycles |

## 4.5 On-Chip Oscillators

### 4.5.1 OSC24M

This block implements an amplifier that when combined with a suitable quartz crystal and external load capacitors implement an oscillator. The oscillator is powered from NVCC\_PLL.

The system crystal oscillator consists of a Pierce-type structure running off the digital supply. A straight forward biased-inverter implementation is used.

### 4.5.2 OSC32K

This block implements an amplifier that when combined with a suitable quartz crystal and external load capacitors implement a low power oscillator. It also implements a power mux such that it can be powered from either a ~3 V backup battery (VDD\_SNVS\_IN) or VDD\_HIGH\_IN such as the oscillator consumes

power from VDD\_HIGH\_IN when that supply is available and transitions to the backup battery when VDD\_HIGH\_IN is lost.

In addition, if the clock monitor determines that the OSC32K is not present, then the source of the 32 K will automatically switch to a crude internal ring oscillator. The frequency range of this block is approximately 10–45 kHz. It highly depends on the process, voltage, and temperature.

The OSC32k runs from VDD\_SNVS\_CAP supply, which comes from the VDD\_HIGH\_IN/VDD\_SNVS\_IN. The target battery is a ~3 V coin cell. Proper choice of coin cell type is necessary for chosen VDD\_HIGH\_IN range. Appropriate series resistor (Rs) must be used when connecting the coin cell. Rs depends on the charge current limit that depends on the chosen coin cell. For example, for Panasonic ML621:

- Average Discharge Voltage is 2.5 V
- Maximum Charge Current is 0.6 mA

For a charge voltage of 3.2 V,  $R_s = (3.2-2.5)/0.6 \text{ m} = 1.17 \text{ k}$ .

**Table 22. OSC32K Main Characteristics**

|                           | Min | Typ             | Max            | Comments  |
|---------------------------|-----|-----------------|----------------|---|
| Fosc                      | —   | 32.768 KHz      | —              | This frequency is nominal and determined mainly by the crystal selected. 32.0 K would work as well.   |
| Current consumption       | —   | 4 $\mu\text{A}$ | —              | The 4 $\mu\text{A}$ is the consumption of the oscillator alone (OSC32k). Total supply consumption will depend on what the digital portion of the RTC consumes. The ring oscillator consumes 1 $\mu\text{A}$ when ring oscillator is inactive, 20 $\mu\text{A}$ when the ring oscillator is running. Another 1.5 $\mu\text{A}$ is drawn from vdd_rtc in the power_detect block. So, the total current is 6.5 $\mu\text{A}$ on vdd_rtc when the ring oscillator is not running. |
| Bias resistor             | —   | 14 M $\Omega$   | —              | This integrated bias resistor sets the amplifier into a high gain state. Any leakage through the ESD network, external board leakage, or even a scope probe that is significant relative to this value will debias the amp. The debiasing will result in low gain, and will impact the circuit's ability to start up and maintain oscillations.   |
| <b>Crystal Properties</b> |     |                 |                |   |
| Cload                     | —   | 10 pF           | —              | Usually crystals can be purchased tuned for different Cloads. This Cload value is typically 1/2 of the capacitances realized on the PCB on either side of the quartz. A higher Cload will decrease oscillation margin, but increases current oscillating through the crystal.   |
| ESR                       | —   | 50 k $\Omega$   | 100 k $\Omega$ | Equivalent series resistance of the crystal. Choosing a crystal with a higher value will decrease the oscillating margin.   |

## 4.6 I/O DC Parameters

This section includes the DC parameters of the following I/O types:

- XTALI and RTC\_XTALI (Clock Inputs) DC Parameters
- General Purpose I/O (GPIO)
- Double Data Rate I/O (DDR) for LPDDR2 and DDR3 modes
- LVDS I/O DC Parameters

**NOTE**

The term ‘OVDD’ in this section refers to the associated supply rail of an input or output.

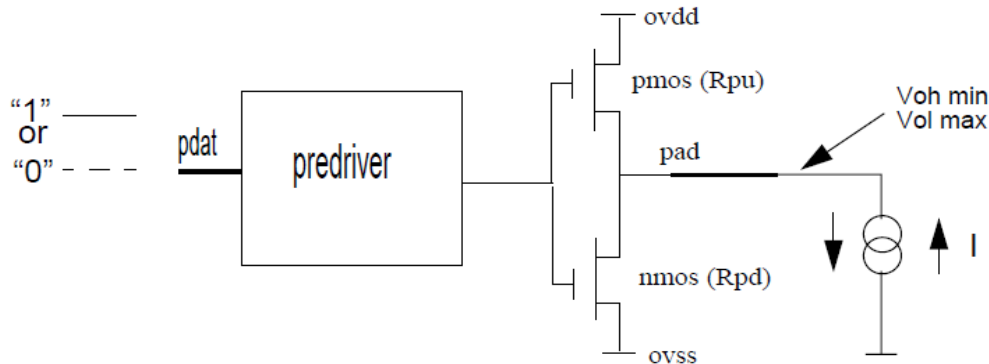

Figure 3. Circuit for Parameters Voh and Vol for I/O Cells

**4.6.1 XTALI and RTC\_XTALI (Clock Inputs) DC Parameters**

Table 23 shows the DC parameters for the clock inputs.

Table 23. XTALI and RTC\_XTALI DC Parameters<sup>1</sup>

| Parameter                             | Symbol | Test Conditions | Min            | Max      | Unit |
|---------------------------------------|--------|-----------------|----------------|----------|------|
| XTALI high-level DC input voltage     | Vih    | —               | 0.8 x NVCC_PLL | NVCC_PLL | V    |
| XTALI low-level DC input voltage      | Vil    | —               | 0              | 0.2      | V    |
| RTC_XTALI high-level DC input voltage | Vih    | —               | 0.8            | 1.1      | V    |
| RTC_XTALI low-level DC input voltage  | Vil    | —               | 0              | 0.2      | V    |

<sup>1</sup> The DC parameters are for external clock input only.

**4.6.2 Single Voltage General Purpose I/O (GPIO) DC Parameters**

Table 24 shows DC parameters for GPIO pads. The parameters in Table 24 are guaranteed per the operating ranges in Table 11, unless otherwise noted.

Table 24. Single Voltage GPIO DC Parameters

| Parameter                               | Symbol          | Test Conditions   | Min       | Max      | Units |
|---|-----------------|---|-----------|----------|-------|
| High-level output voltage <sup>1</sup>  | V <sub>OH</sub> | loh= -0.1mA (ipp_dse=001,010)<br>loh= -1mA<br>(ipp_dse=011,100,101,110,111) | OVDD-0.15 | —        | V     |
| Low-level output voltage <sup>1</sup>   | V <sub>OL</sub> | lol= 0.1mA (ipp_dse=001,010)<br>lol= 1mA<br>(ipp_dse=011,100,101,110,111)   | —         | 0.15     | V     |
| High-Level input voltage <sup>1,2</sup> | V <sub>IH</sub> | —   | 0.7*OVDD  | OVDD     | V     |
| Low-Level input voltage <sup>1,2</sup>  | V <sub>IL</sub> | —   | 0         | 0.3*OVDD | V     |

Table 24. Single Voltage GPIO DC Parameters (continued)

| Parameter                              | Symbol       | Test Conditions              | Min      | Max      | Units      |
|--|--------------|------------------------------|----------|----------|------------|
| Input Hysteresis (OVDD= 1.8V)          | VHYS_LowVDD  | OVDD=1.8V                    | 250      | —        | mV         |
| Input Hysteresis (OVDD=3.3V)           | VHYS_HighVDD | OVDD=3.3V                    | 250      | —        | mV         |
| Schmitt trigger $V_{T+}^{2,3}$         | VTH+         | —                            | 0.5*OVDD | —        | mV         |
| Schmitt trigger $V_{T-}^{2,3}$         | VTH-         | —                            | —        | 0.5*OVDD | mV         |
| Pull-up resistor (22_k $\Omega$ PU)    | RPU_22K      | Vin=0V                       | —        | 212      | $\mu$ A    |
| Pull-up resistor (22_k $\Omega$ PU)    | RPU_22K      | Vin=OVDD                     | —        | 1        | $\mu$ A    |
| Pull-up resistor (47_k $\Omega$ PU)    | RPU_47K      | Vin=0V                       | —        | 100      | $\mu$ A    |
| Pull-up resistor (47_k $\Omega$ PU)    | RPU_47K      | Vin=OVDD                     | —        | 1        | $\mu$ A    |
| Pull-up resistor (100_k $\Omega$ PU)   | RPU_100K     | Vin=0V                       | —        | 48       | $\mu$ A    |
| Pull-up resistor (100_k $\Omega$ PU)   | RPU_100K     | Vin=OVDD                     | —        | 1        | $\mu$ A    |
| Pull-down resistor (100_k $\Omega$ PD) | RPD_100K     | Vin=OVDD                     | —        | 48       | $\mu$ A    |
| Pull-down resistor (100_k $\Omega$ PD) | RPD_100K     | Vin=0V                       | —        | 1        | $\mu$ A    |
| Input current (no PU/PD)               | IIN          | VI = 0, VI = OVDD            | -1       | 1        | $\mu$ A    |
| Keeper Circuit Resistance              | R_Keeper     | VI =0.3*OVDD, VI = 0.7* OVDD | 105      | 175      | k $\Omega$ |

<sup>1</sup> Overshoot and undershoot conditions (transitions above OVDD and below GND) on switching pads must be held below 0.6 V, and the duration of the overshoot/undershoot must not exceed 10% of the system clock cycle. Overshoot/undershoot must be controlled through printed circuit board layout, transmission line impedance matching, signal line termination, or other methods. Non-compliance to this specification may affect device reliability or cause permanent damage to the device.

<sup>2</sup> To maintain a valid level, the transition edge of the input must sustain a constant slew rate (monotonic) from the current DC level through to the target DC level,  $V_{il}$  or  $V_{ih}$ . Monotonic input transition time is from 0.1 ns to 1 s.

<sup>3</sup> Hysteresis of 250 mV is guaranteed over all operating conditions when hysteresis is enabled.

### 4.6.3 DDR I/O DC Parameters

The DDR I/O pads support LPDDR2 and DDR3/DDR3L operational modes. The Multi-mode DDR Controller (MMDC) is compatible with JEDEC-compliant SDRAMs.

The i.MX 6UltraLite MMDC supports the following memory types:

- LPDDR2 SDRAM compliant to JESD209-2B LPDDR2 JEDEC standard release June, 2009
- DDR3 SDRAM compliant to JESD79-3E DDR3 JEDEC standard release July, 2010

MMDC operation with the standards stated above is contingent upon the board DDR design adherence to the DDR design and layout requirements stated in the *Hardware Development Guide for the i.MX 6UltraLite Applications Processor (IMX6ULHDG)*.

### 4.6.3.1 LPDDR2 Mode I/O DC Parameters

Table 25. LPDDR2 I/O DC Electrical Parameters<sup>1</sup>

| Parameters                           | Symbol               | Test Conditions                           | Min                    | Max                    | Unit |
|--------------------------------------|----------------------|---|------------------------|------------------------|------|
| High-level output voltage            | VOH                  | I <sub>oh</sub> = -0.1mA                  | 0.9*OVDD               | —                      | V    |
| Low-level output voltage             | VOL                  | I <sub>ol</sub> = 0.1mA                   | —                      | 0.1*OVDD               | V    |
| Input Reference Voltage              | V <sub>ref</sub>     | —   | 0.49*OVDD              | 0.51*OVDD              | V    |
| DC High-Level input voltage          | V <sub>ih_DC</sub>   | —   | V <sub>ref</sub> +0.13 | OVDD                   | V    |
| DC Low-Level input voltage           | V <sub>il_DC</sub>   | —   | OVSS                   | V <sub>ref</sub> -0.13 | V    |
| Differential Input Logic High        | V <sub>ih_diff</sub> | —   | 0.26                   | —                      | —    |
| Differential Input Logic Low         | V <sub>il_diff</sub> | —   | Note <sup>2</sup>      | -0.26                  | —    |
| Pull-up/Pull-down Impedance Mismatch | Mmpupd               | —   | -15                    | 15                     | %    |
| 240 Ω unit calibration resolution    | R <sub>res</sub>     | —   | —                      | 10                     | Ω    |
| Keeper Circuit Resistance            | R <sub>keep</sub>    | —   | 110                    | 175                    | kΩ   |
| Input current (no pull-up/down)      | I <sub>in</sub>      | V <sub>I</sub> = 0, V <sub>I</sub> = OVDD | -2.5                   | 2.5                    | μA   |

<sup>1</sup> Note that the JEDEC LPDDR2 specification (JESD209\_2B) supersedes any specification in this document.

### 4.6.3.2 DDR3/DDR3L Mode I/O DC Parameters

The parameters in Table 27 are guaranteed per the operating ranges in Table 11, unless otherwise noted.

Table 27. DDR3/DDR3L I/O DC Electrical Characteristics

| Parameters                           | Symbol               | Test Conditions  | Min                                | Max                   | Unit |
|--------------------------------------|----------------------|--|------------------------------------|-----------------------|------|
| High-level output voltage            | VOH                  | I <sub>oh</sub> = -0.1mA<br>V <sub>oh</sub> (for ipp_dse=001)          | 0.8*OVDD <sup>1</sup>              | —                     | V    |
| Low-level output voltage             | VOL                  | I <sub>ol</sub> = 0.1mA<br>V <sub>ol</sub> (for ipp_dse=001)           | 0.2*OVDD                           | —                     | V    |
| High-level output voltage            | VOH                  | I <sub>oh</sub> = -1mA<br>V <sub>oh</sub> (for all except ipp_dse=001) | 0.8*OVDD                           | —                     | V    |
| Low-level output voltage             | VOL                  | I <sub>ol</sub> = 1mA<br>V <sub>ol</sub> (for all except ipp_dse=001)  | 0.2*OVDD                           | —                     | V    |
| Input Reference Voltage              | V <sub>ref</sub>     | —  | 0.49*ovdd                          | 0.51*ovdd             | V    |
| DC High-Level input voltage          | V <sub>ih_DC</sub>   | —  | V <sub>ref</sub> <sup>2</sup> +0.1 | OVDD                  | V    |
| DC Low-Level input voltage           | V <sub>il_DC</sub>   | —  | OVSS                               | V <sub>ref</sub> -0.1 | V    |
| Differential Input Logic High        | V <sub>ih_diff</sub> | —  | 0.2                                | See Note <sup>3</sup> | V    |
| Differential Input Logic Low         | V <sub>il_diff</sub> | —  | See Note <sup>3</sup>              | -0.2                  | V    |
| Termination Voltage                  | V <sub>tt</sub>      | V <sub>tt</sub> tracking OVDD/2  | 0.49*OVDD                          | 0.51*OVDD             | V    |
| Pull-up/Pull-down Impedance Mismatch | Mmpupd               | —  | -10                                | 10                    | %    |
| 240 Ω unit calibration resolution    | R <sub>res</sub>     | —  | —                                  | 10                    | Ω    |

Table 27. DDR3/DDR3L I/O DC Electrical Characteristics (continued)

| Parameters                      | Symbol | Test Conditions   | Min  | Max | Unit       |
|---------------------------------|--------|-------------------|------|-----|------------|
| Keeper Circuit Resistance       | Rkeep  | —                 | 105  | 165 | k $\Omega$ |
| Input current (no pull-up/down) | Iin    | VI = 0, VI = OVDD | -2.9 | 2.9 | $\mu$ A    |

<sup>1</sup> OVDD – I/O power supply (1.425 V–1.575 V for DDR3 and 1.283 V–1.45 V for DDR3L)

<sup>2</sup> Vref – DDR3/DDR3L external reference voltage

<sup>3</sup> The single-ended signals need to be within the respective limits (Vih(dc) max, Vil(dc) min) for single-ended signals as well as the limitations for overshoot and undershoot.

#### 4.6.4 LVDS I/O DC Parameters

The LVDS interface complies with TIA/EIA 644-A standard. See TIA/EIA STANDARD 644-A, “Electrical Characteristics of Low Voltage Differential Signaling (LVDS) Interface Circuits” for details.

Table 28 shows the Low Voltage Differential Signaling (LVDS) I/O DC parameters.

Table 28. LVDS I/O DC Characteristics

| Parameter                   | Symbol | Test Conditions         | Min   | Typ   | Max   | Unit |
|-----------------------------|--------|-------------------------|-------|-------|-------|------|
| Output Differential Voltage | VOD    | Rload-100 $\Omega$ Diff | 250   | 350   | 450   | mV   |
| Output High Voltage         | VOH    | IOH = 0 mA              | 1.25  | 1.375 | 1.6   | V    |
| Output Low Voltage          | VOL    | IOL = 0 mA              | 0.9   | 1.025 | 1.25  | V    |
| Offset Voltage              | VOS    | —                       | 1.125 | 1.2   | 1.375 | V    |

#### 4.7 I/O AC Parameters

This section includes the AC parameters of the following I/O types:

- General Purpose I/O (GPIO)
- Double Data Rate I/O (DDR) for LPDDR2 and DDR3/DDR3L modes

The GPIO and DDR I/O load circuit and output transition time waveforms are shown in Figure 4 and Figure 5.

Figure 4. Load Circuit for Output

## Electrical Characteristics

Figure 5. Output Transition Time Waveform

### 4.7.1 General Purpose I/O AC Parameters

The I/O AC parameters for GPIO in slow and fast modes are presented in the [Table 29](#) and [Table 30](#), respectively. Note that the fast or slow I/O behavior is determined by the appropriate control bits in the IOMUXC control registers.

Table 29. General Purpose I/O AC Parameters 1.8 V Mode

| Parameter  | Symbol | Test Condition   | Min | Typ | Max                    | Unit |
|--|--------|--|-----|-----|------------------------|------|
| Output Pad Transition Times, rise/fall (Max Drive, ipp_dse=111)    | tr, tf | 15 pF Cload, slow slew rate<br>15 pF Cload, fast slew rate | —   | —   | 2.72/2.79<br>1.51/1.54 | ns   |
| Output Pad Transition Times, rise/fall (High Drive, ipp_dse=101)   | tr, tf | 15 pF Cload, slow slew rate<br>15 pF Cload, fast slew rate | —   | —   | 3.20/3.36<br>1.96/2.07 |      |
| Output Pad Transition Times, rise/fall (Medium Drive, ipp_dse=100) | tr, tf | 15 pF Cload, slow slew rate<br>15 pF Cload, fast slew rate | —   | —   | 3.64/3.88<br>2.27/2.53 |      |
| Output Pad Transition Times, rise/fall (Low Drive, ipp_dse=011)    | tr, tf | 15 pF Cload, slow slew rate<br>15 pF Cload, fast slew rate | —   | —   | 4.32/4.50<br>3.16/3.17 |      |
| Input Transition Times <sup>1</sup>                                | trm    | —  | —   | —   | 25                     | ns   |

<sup>1</sup> Hysteresis mode is recommended for inputs with transition times greater than 25 ns.

Table 30. General Purpose I/O AC Parameters 3.3 V Mode

| Parameter  | Symbol | Test Condition   | Min | Typ | Max                    | Unit |
|--|--------|--|-----|-----|------------------------|------|
| Output Pad Transition Times, rise/fall (Max Drive, ipp_dse=101)    | tr, tf | 15 pF Cload, slow slew rate<br>15 pF Cload, fast slew rate | —   | —   | 1.70/1.79<br>1.06/1.15 | ns   |
| Output Pad Transition Times, rise/fall (High Drive, ipp_dse=011)   | tr, tf | 15 pF Cload, slow slew rate<br>15 pF Cload, fast slew rate | —   | —   | 2.35/2.43<br>1.74/1.77 |      |
| Output Pad Transition Times, rise/fall (Medium Drive, ipp_dse=010) | tr, tf | 15 pF Cload, slow slew rate<br>15 pF Cload, fast slew rate | —   | —   | 3.13/3.29<br>2.46/2.60 |      |
| Output Pad Transition Times, rise/fall (Low Drive, ipp_dse=001)    | tr, tf | 15 pF Cload, slow slew rate<br>15 pF Cload, fast slew rate | —   | —   | 5.14/5.57<br>4.77/5.15 | ns   |
| Input Transition Times <sup>1</sup>                                | trm    | —  | —   | —   | 25                     | ns   |

<sup>1</sup> Hysteresis mode is recommended for inputs with transition times greater than 25 ns.

### 4.7.2 DDR I/O AC Parameters

The Multi-mode DDR Controller (MMDC) is compatible with JEDEC-compliant SDRAMs.

The i.MX 6UltraLite MMDC supports the following memory types:

- LPDDR2 SDRAM compliant to JESD209-2B LPDDR2 JEDEC standard release June, 2009
- DDR3 SDRAM compliant to JESD79-3E DDR3 JEDEC standard release July, 2010

MMDC operation with the standards stated above is contingent upon the board DDR design adherence to the DDR design and layout requirements stated in the *Hardware Development Guide for the i.MX 6UltraLite Applications Processor (IMX6ULHDG)*.

Table 31 shows the AC parameters for DDR I/O operating in LPDDR2 mode.

**Table 31. DDR I/O LPDDR2 Mode AC Parameters<sup>1</sup>**

| Parameter   | Symbol           | Test Condition   | Min         | Max         | Unit |
|---|------------------|--|-------------|-------------|------|
| AC input logic high   | Vih(ac)          | —  | Vref + 0.22 | OVDD        | V    |
| AC input logic low  | Vil(ac)          | —  | 0           | Vref - 0.22 | V    |
| AC differential input high voltage <sup>2</sup>                 | Vidh(ac)         | —  | 0.44        | —           | V    |
| AC differential input low voltage                               | Vidl(ac)         | —  | —           | 0.44        | V    |
| Input AC differential cross point voltage <sup>3</sup>          | Vix(ac)          | Relative to Vref   | -0.12       | 0.12        | V    |
| Over/undershoot peak  | Vpeak            | —  | —           | 0.35        | V    |
| Over/undershoot area (above OVDD or below OVSS)                 | Varea            | 400 MHz  | —           | 0.3         | V-ns |
| Single output slew rate, measured between Vol (ac) and Voh (ac) | tsr              | 50 Ω to Vref.<br>5 pF load.<br>Drive impedance = 40 Ω<br>± 30% | 1.5         | 3.5         | V/ns |
|   |                  | 50 Ω to Vref.<br>5pF load.Drive<br>impedance = 60 Ω ±<br>30%   | 1           | 2.5         |      |
| Skew between pad rise/fall asymmetry + skew caused by SSN       | t <sub>SKD</sub> | clk = 400 MHz  | —           | 0.1         | ns   |

<sup>1</sup> Note that the JEDEC LPDDR2 specification (JESD209\_2B) supersedes any specification in this document.

<sup>2</sup> Vid(ac) specifies the input differential voltage |Vtr - Vcp| required for switching, where Vtr is the “true” input signal and Vcp is the “complementary” input signal. The Minimum value is equal to Vih(ac) - Vil(ac).

<sup>3</sup> The typical value of Vix(ac) is expected to be about 0.5 x OVDD. and Vix(ac) is expected to track variation of OVDD. Vix(ac) indicates the voltage at which differential input signal must cross.

Table 32 shows the AC parameters for DDR I/O operating in DDR3/DDR3L mode.

**Table 32. DDR I/O DDR3/DDR3L Mode AC Parameters<sup>1</sup>**

| Parameter                                  | Symbol  | Test Condition | Min          | Typ | Max          | Unit |
|--|---------|----------------|--------------|-----|--------------|------|
| AC input logic high                        | Vih(ac) | —              | Vref + 0.175 | —   | OVDD         | V    |
| AC input logic low                         | Vil(ac) | —              | 0            | —   | Vref - 0.175 | V    |
| AC differential input voltage <sup>2</sup> | Vid(ac) | —              | 0.35         | —   | —            | V    |

Table 32. DDR I/O DDR3/DDR3L Mode AC Parameters<sup>1</sup> (continued)

| Parameter   | Symbol           | Test Condition          | Min         | Typ | Max         | Unit |
|---|------------------|-------------------------|-------------|-----|-------------|------|
| Input AC differential cross point voltage <sup>3</sup>          | Vix(ac)          | Relative to Vref        | Vref - 0.15 | —   | Vref + 0.15 | V    |
| Over/undershoot peak  | Vpeak            | —                       | —           | —   | 0.4         | V    |
| Over/undershoot area (above OVDD or below OVSS)                 | Varea            | 400 MHz                 | —           | —   | 0.5         | V-ns |
| Single output slew rate, measured between Vol (ac) and Voh (ac) | tsr              | Driver impedance = 34 Ω | 2.5         | —   | 5           | V/ns |
| Skew between pad rise/fall asymmetry + skew caused by SSN       | t <sub>SKD</sub> | clk = 400 MHz           | —           | —   | 0.1         | ns   |

<sup>1</sup> Note that the JEDEC JESD79\_3D specification supersedes any specification in this document.

<sup>2</sup> Vid(ac) specifies the input differential voltage  $|V_{tr}-V_{cp}|$  required for switching, where Vtr is the “true” input signal and Vcp is the “complementary” input signal. The Minimum value is equal to Vih(ac) - Vil(ac).

<sup>3</sup> The typical value of Vix(ac) is expected to be about 0.5 x OVDD. and Vix(ac) is expected to track variation of OVDD. Vix(ac) indicates the voltage at which differential input signal must cross.

## 4.8 Output Buffer Impedance Parameters

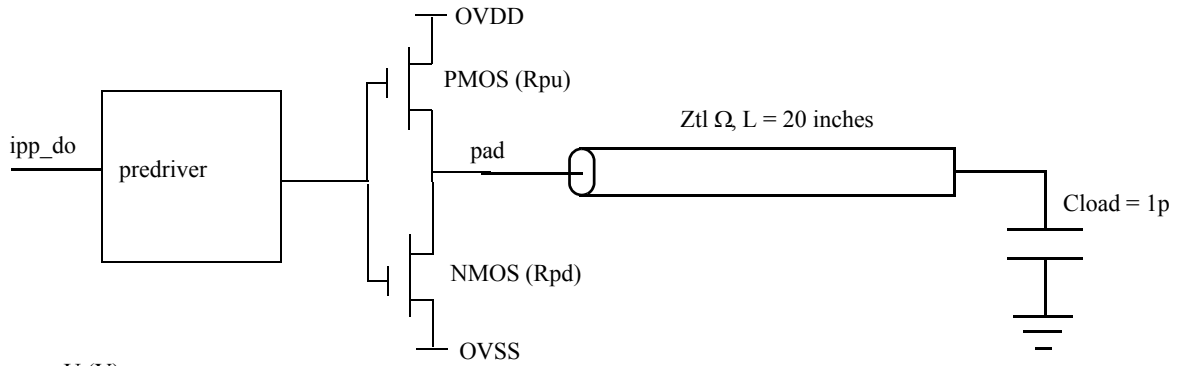

This section defines the I/O impedance parameters of the i.MX 6UltraLite processors for the following I/O types:

- Single Voltage General Purpose I/O (GPIO)
- Double Data Rate I/O (DDR) for LPDDR2, and DDR3/DDR3L modes

### NOTE

GPIO and DDR I/O output driver impedance is measured with “long” transmission line of impedance Ztl attached to I/O pad and incident wave launched into transmission line. Rpu/Rpd and Ztl form a voltage divider that defines specific voltage of incident wave relative to OVDD. Output driver impedance is calculated from this voltage divider (see [Figure 6](#)).

$$R_{pu} = \frac{V_{ovdd} - V_{ref1}}{V_{ref1}} \times Z_{tl}$$

$$R_{pd} = \frac{V_{ref2}}{V_{ovdd} - V_{ref2}} \times Z_{tl}$$

**Figure 6. Impedance Matching Load for Measurement**

### 4.8.1 Single Voltage GPIO Output Buffer Impedance

Table 33 shows the GPIO output buffer impedance (OVDD 1.8 V).

**Table 33. GPIO Output Buffer Average Impedance (OVDD 1.8 V)**

| Parameter               | Symbol | Drive Strength (DSE) | Typ Value | Unit |
|-------------------------|--------|----------------------|-----------|------|
| Output Driver Impedance | Rdrv   | 001                  | 260       | Ω    |
|                         |        | 010                  | 130       |      |
|                         |        | 011                  | 88        |      |
|                         |        | 100                  | 65        |      |
|                         |        | 101                  | 52        |      |
|                         |        | 110                  | 43        |      |
|                         |        | 111                  | 37        |      |

Table 34 shows the GPIO output buffer impedance (OVDD 3.3 V).

**Table 34. GPIO Output Buffer Average Impedance (OVDD 3.3 V)**

| Parameter               | Symbol | Drive Strength (DSE) | Typ Value | Unit |
|-------------------------|--------|----------------------|-----------|------|
| Output Driver Impedance | Rdrv   | 001                  | 157       | Ω    |
|                         |        | 010                  | 78        |      |
|                         |        | 011                  | 53        |      |
|                         |        | 100                  | 39        |      |
|                         |        | 101                  | 32        |      |
|                         |        | 110                  | 26        |      |
|                         |        | 111                  | 23        |      |

### 4.8.2 DDR I/O Output Buffer Impedance

Table 35 shows DDR I/O output buffer impedance of i.MX 6UltraLite processors.

**Table 35. DDR I/O Output Buffer Impedance**

| Parameter               | Symbol | Test Conditions DSE (Drive Strength) | Typical                           |                                     | Unit |
|-------------------------|--------|--------------------------------------|-----------------------------------|-------------------------------------|------|
|                         |        |                                      | NVCC_DRAM=1.5 V (DDR3) DDR_SEL=11 | NVCC_DRAM=1.2 V (LPDDR2) DDR_SEL=10 |      |
| Output Driver Impedance | Rdrv   | 000                                  | Hi-Z                              | Hi-Z                                | Ω    |
|                         |        | 001                                  | 240                               | 240                                 |      |
|                         |        | 010                                  | 120                               | 120                                 |      |
|                         |        | 011                                  | 80                                | 80                                  |      |
|                         |        | 100                                  | 60                                | 60                                  |      |
|                         |        | 101                                  | 48                                | 48                                  |      |
|                         |        | 110                                  | 40                                | 40                                  |      |
| 111                     | 34     | 34                                   |                                   |                                     |      |

**Note:**

1. Output driver impedance is controlled across PVTs using ZQ calibration procedure.
2. Calibration is done against 240 Ω external reference resistor.
3. Output driver impedance deviation (calibration accuracy) is ±5% (max/min impedance) across PVTs.
4. It is recommended to use a strong driver strength (<= 48 Ω) for all DDR pads and all DDR type (DDR3/DDR3L/LPDDR2).

## 4.9 System Modules Timing

This section contains the timing and electrical parameters for the modules in each i.MX 6UltraLite processor.

### 4.9.1 Reset Timings Parameters

Figure 7 shows the reset timing and Table 36 lists the timing parameters.

Figure 7. Reset Timing Diagram

Table 36. Reset Timing Parameters

| ID  | Parameter                                   | Min | Max | Unit            |
|-----|---|-----|-----|-----------------|
| CC1 | Duration of POR_B to be qualified as valid. | 1   | —   | RTC_XTALI cycle |

### 4.9.2 WDOG Reset Timing Parameters

Figure 8 shows the WDOG reset timing and Table 37 lists the timing parameters.

Figure 8. WDOGn\_B Timing Diagram

Table 37. WDOGn\_B Timing Parameters

| ID  | Parameter                     | Min | Max | Unit            |
|-----|-------------------------------|-----|-----|-----------------|
| CC3 | Duration of WDOGn_B Assertion | 1   | —   | RTC_XTALI cycle |

#### NOTE

RTC\_XTALI is approximately 32 kHz. RTC\_XTALI cycle is one period or approximately 30  $\mu$ s.

#### NOTE

WDOG1\_B output signals (for each one of the Watchdog modules) do not have dedicated pins, but are muxed out through the IOMUX. See the IOMUX manual for detailed information.

### 4.9.3 External Interface Module (EIM)

The following subsections provide information on the EIM. Maximum operating frequency for EIM data transfer is 104 MHz. Timing parameters in this section that are given as a function of register settings or clock periods are valid for the entire range of allowed frequencies (0–104 MHz).

#### 4.9.3.1 EIM Interface Pads Allocation

EIM supports 16-bit and 8-bit devices operating in address/data separate or multiplexed modes. Table 38 provides EIM interface pads allocation in different modes.

**Table 38. EIM Internal Module Multiplexing<sup>1</sup>**

| Setup                       | Non Multiplexed Address/Data Mode |                    |                    |                    |                    |                    | Multiplexed Address/Data mode |
|-----------------------------|-----------------------------------|--------------------|--------------------|--------------------|--------------------|--------------------|-------------------------------|
|                             | 8 Bit                             |                    |                    |                    | 16 Bit             |                    | 16 Bit                        |
|                             | MUM = 0, DSZ = 100                | MUM = 0, DSZ = 101 | MUM = 0, DSZ = 110 | MUM = 0, DSZ = 111 | MUM = 0, DSZ = 001 | MUM = 0, DSZ = 010 | MUM = 1, DSZ = 001            |
| EIM_ADDR [15:00]            | EIM_AD [15:00]                    | EIM_AD [15:00]     | EIM_AD [15:00]     | EIM_AD [15:00]     | EIM_AD [15:00]     | EIM_AD [15:00]     | EIM_AD [15:00]                |
| EIM_ADDR [26:16]            | EIM_ADDR [26:16]                  | EIM_ADDR [26:16]   | EIM_ADDR [26:16]   | EIM_ADDR [26:16]   | EIM_ADDR [26:16]   | EIM_ADDR [26:16]   | EIM_ADDR [26:16]              |
| EIM_DATA [07:00], EIM_EB0_B | EIM_DATA [07:00]                  | —                  | Reserved           | Reserved           | EIM_DATA [07:00]   | Reserved           | EIM_AD [07:00]                |
| EIM_DATA [15:08], EIM_EB1_B | —                                 | EIM_DATA [15:08]   | Reserved           | Reserved           | EIM_DATA [15:08]   | Reserved           | EIM_AD [15:08]                |

<sup>1</sup> For more information on configuration ports mentioned in this table, see the *i.MX 6UltraLite Reference Manual (IMX6ULRM)*.

### 4.9.3.2 General EIM Timing-Synchronous Mode

Figure 9, Figure 10, and Table 39 specify the timings related to the EIM module. All EIM output control signals may be asserted and deasserted by an internal clock synchronized to the EIM\_BCLK rising edge according to corresponding assertion/negation control fields.

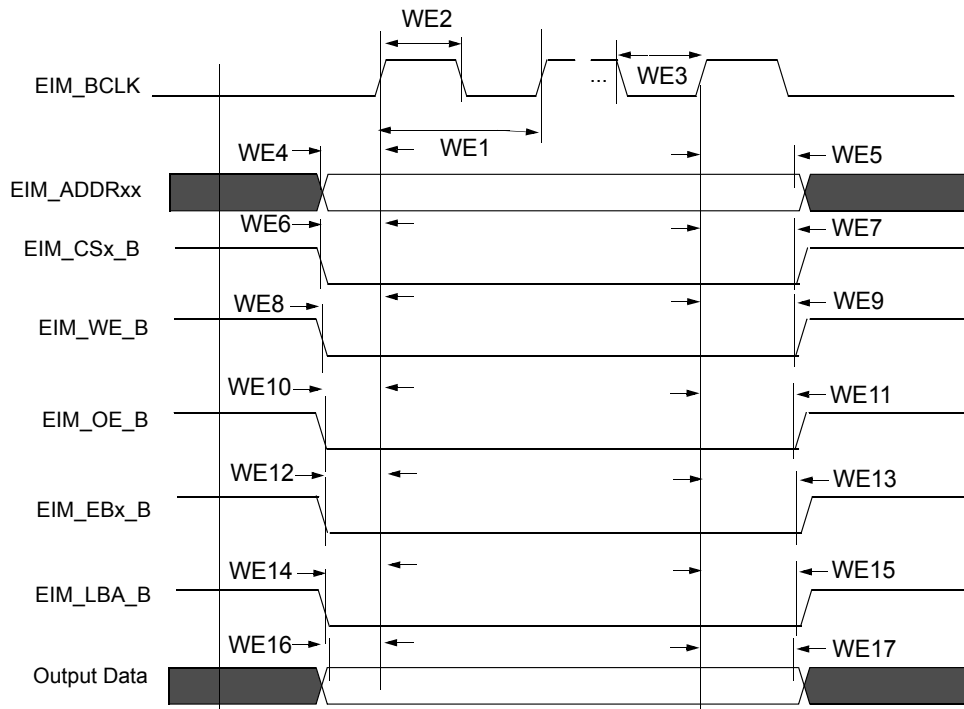

Figure 9. EIM Outputs Timing Diagram

Figure 10. EIM Inputs Timing Diagram

### 4.9.3.3 Examples of EIM Synchronous Accesses

Table 39. EIM Bus Timing Parameters

| ID  | Parameter                        | Min <sup>1</sup>                      | Max <sup>1</sup>                      | Unit |
|-----|----------------------------------|---------------------------------------|---------------------------------------|------|
| WE1 | EIM_BCLK Cycle time <sup>2</sup> | $t \times (k + 1)$                    | —                                     | ns   |
| WE2 | EIM_BCLK Low Level Width         | $0.4 \times t \times (k + 1)$         | —                                     | ns   |
| WE3 | EIM_BCLK High Level Width        | $0.4 \times t \times (k + 1)$         | —                                     | ns   |
| WE4 | Clock rise to address valid      | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |

Table 39. EIM Bus Timing Parameters (continued)

| ID   | Parameter                            | Min <sup>1</sup>                      | Max <sup>1</sup>                      | Unit |
|------|--------------------------------------|---------------------------------------|---------------------------------------|------|
| WE5  | Clock rise to address invalid        | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE6  | Clock rise to EIM_CSx_B valid        | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE7  | Clock rise to EIM_CSx_B invalid      | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE8  | Clock rise to EIM_WE_B Valid         | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE9  | Clock rise to EIM_WE_B Invalid       | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE10 | Clock rise to EIM_OE_B Valid         | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE11 | Clock rise to EIM_OE_B Invalid       | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE12 | Clock rise to EIM_EBx_B Valid        | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE13 | Clock rise to EIM_EBx_B Invalid      | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE14 | Clock rise to EIM_LBA_B Valid        | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE15 | Clock rise to EIM_LBA_B Invalid      | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE16 | Clock rise to Output Data Valid      | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE17 | Clock rise to Output Data Invalid    | $-0.5 \times t \times (k + 1) - 1.25$ | $-0.5 \times t \times (k + 1) + 2.25$ | ns   |
| WE18 | Input Data setup time to Clock rise  | 2.3                                   | —                                     | ns   |
| WE19 | Input Data hold time from Clock rise | 2                                     | —                                     | ns   |
| WE20 | EIM_WAIT_B setup time to Clock rise  | 2                                     | —                                     | ns   |
| WE21 | EIM_WAIT_B hold time from Clock rise | 2                                     | —                                     | ns   |

<sup>1</sup> k represents register setting BCD value.

<sup>2</sup> t is clock period (1/Freq.) For 104 MHz, t = 9.165 ns.

Figure 11 to Figure 14 provide few examples of basic EIM accesses to external memory devices with the timing parameters mentioned previously for specific control parameters settings.

Figure 11. Synchronous Memory Read Access, WSC=1

Figure 12. Synchronous Memory, Write Access, WSC=1, WBEA=0 and WADV=0

Figure 13. Muxed Address/Data (A/D) Mode, Synchronous Write Access, WSC=6, ADVA=0, ADVN=1, and ADH=1

**NOTE**

In 32-bit muxed address/data (A/D) mode the 16 MSBs are driven on the data bus.

Figure 14. 16-Bit Muxed A/D Mode, Synchronous Read Access, WSC=7, RADVN=1, ADH=1, OEA=0

#### 4.9.3.4 General EIM Timing-Asynchronous Mode

Figure 15 through Figure 19, and Table 40 help to determine timing parameters relative to the chip select (CS) state for asynchronous and DTACK EIM accesses with corresponding EIM bit fields and the timing parameters mentioned above.

Asynchronous read & write access length in cycles may vary from what is shown in Figure 15 through Figure 18 as RWSC, OEN and CSN is configured differently. See the *i.MX 6UltraLite Reference Manual (IMX6ULRM)* for the EIM programming model.

<sup>1</sup> For more information on configuration parameters mentioned in this table, see the *i.MX 6UltraLite Reference Manual* (IMX6ULRM).

<sup>2</sup> In this table, CSA means WCSA when write operation or RCSA when read operation

— t means clock period from axi\_clk frequency.

—CSA means register setting for WCSA when in write operations or RCSA when in read operations.

—CSN means register setting for WCSN when in write operations or RCSN when in read operations.

—ADV N means register setting for WADV N when in write operations or RADV N when in read operations.

—ADVA means register setting for WADVA when in write operations or RADVA when in read operations.

## 4.9.4 DDR SDRAM Specific Parameters (DDR3 and LPDDR2)

### 4.9.4.1 DDR3 Parameters

The i.MX 6UltraLite supports single Chip Select DDR3 memory with CS0\_B, ODT0, and SDCKE0. Figure 21 shows the DDR3 basic timing diagram with the timing parameters provided in Table 41.

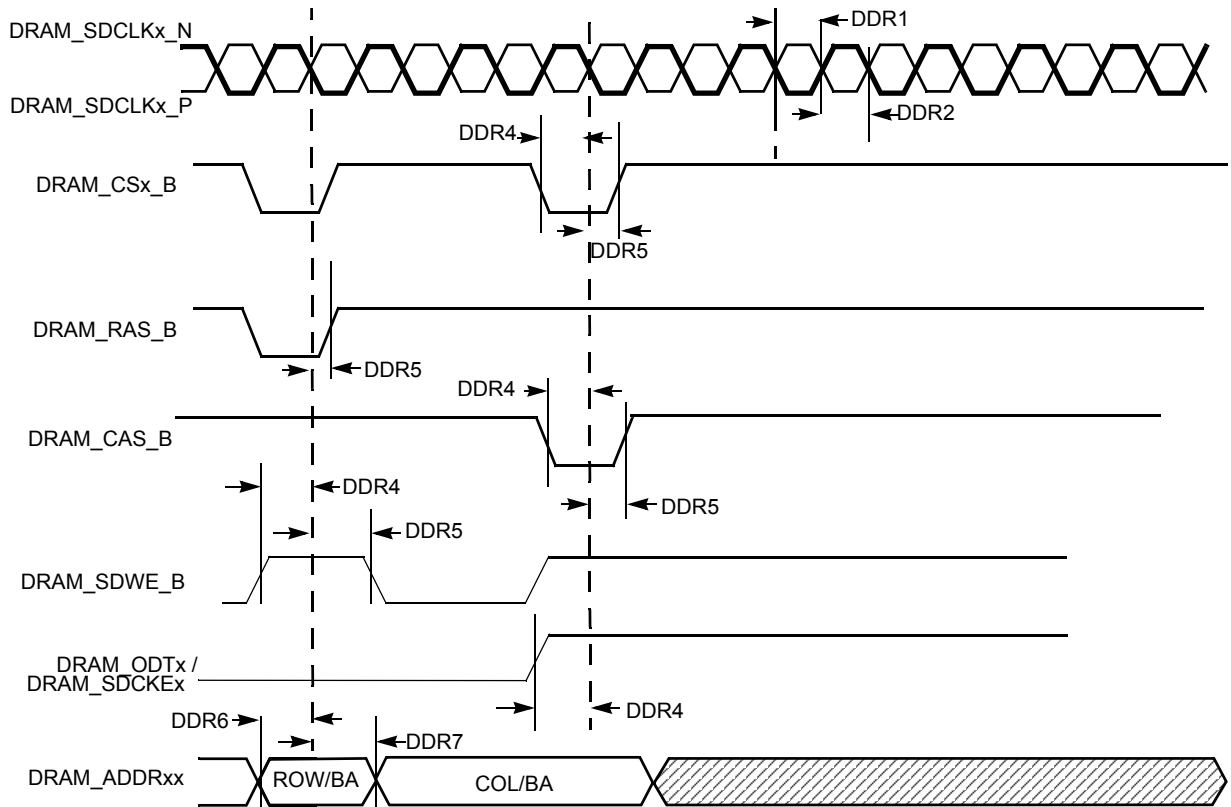

Figure 21. DDR3 Command and Address Timing Diagram

Table 41. DDR3 Timing Parameters

| ID   | Parameter   | Symbol          | CK = 400 MHz |      | Unit |
|------|---|-----------------|--------------|------|------|
|      |   |                 | Min          | Max  |      |
| DDR1 | DRAM_SDCLKx_P clock high-level width  | tCH             | 0.47         | 0.53 | tck  |
| DDR2 | DRAM_SDCLKx_P clock low-level width   | tCL             | 0.47         | 0.53 | tck  |
| DDR4 | DRAM_CSx_B, DRAM_RAS_B, DRAM_CAS_B, DRAM_SDCKE, DRAM_SDWE_B, DRAM_SDOdT <sub>x</sub> setup time | t <sub>IS</sub> | 515          | —    | ps   |
| DDR5 | DRAM_CSx_B, DRAM_RAS_B, DRAM_CAS_B, DRAM_SDCKE, DRAM_SDWE_B, DRAM_SDOdT <sub>x</sub> hold time  | t <sub>IH</sub> | 425          | —    | ps   |
| DDR6 | Address output setup time   | t <sub>IS</sub> | 515          | —    | ps   |
| DDR7 | Address output hold time  | t <sub>IH</sub> | 425          | —    | ps   |

<sup>1</sup> All measurements are in reference to Vref level.

<sup>2</sup> Measurements were done using balanced load and 25 Ω resistor from outputs to VDD\_REF.

Figure 22 shows the DDR3 write timing diagram. The timing parameters for this diagram appear in Table 42.

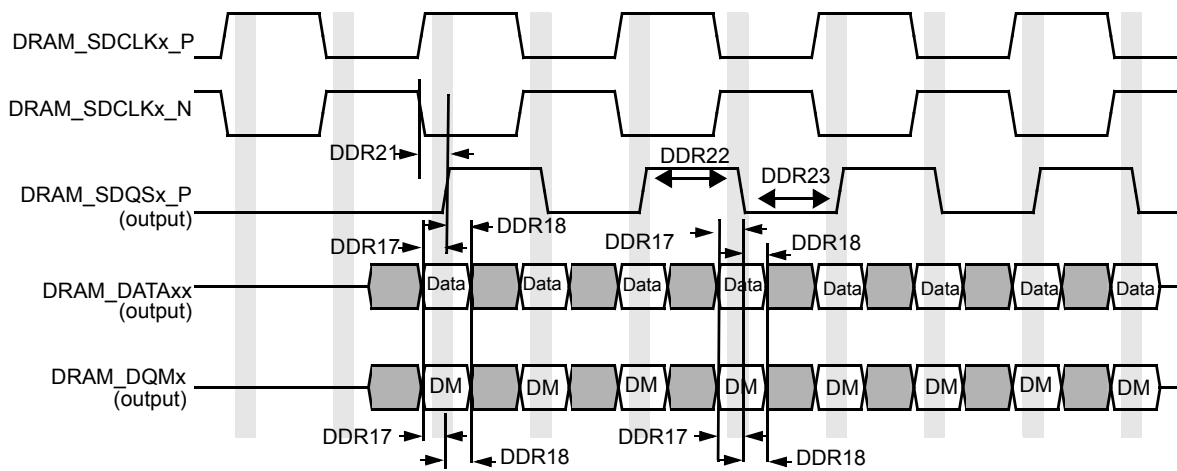

Figure 22. DDR3 Write Cycle

Table 42. DDR3 Write Cycle

| ID    | Parameter  | Symbol            | CK = 400MHz |       | Unit |
|-------|--|-------------------|-------------|-------|------|
|       |  |                   | Min         | Max   |      |
| DDR17 | DRAM_DATAxx and DRAM_DQMx setup time to DRAM_SDQSx_P (differential strobe) | t <sub>DS</sub>   | 175         | —     | ps   |
| DDR18 | DRAM_DATAxx and DRAM_DQMx hold time to DRAM_SDQSx_P (differential strobe)  | t <sub>DH</sub>   | 200         | —     | ps   |
| DDR21 | DRAM_SDQSx_P latching rising transitions to associated clock edges         | t <sub>DQSS</sub> | -0.25       | +0.25 | tCK  |
| DDR22 | DRAM_SDQSx_P high level width  | t <sub>DQSH</sub> | 0.45        | 0.55  | tCK  |
| DDR23 | DRAM_SDQSx_P low level width   | t <sub>DQSL</sub> | 0.45        | 0.55  | tCK  |

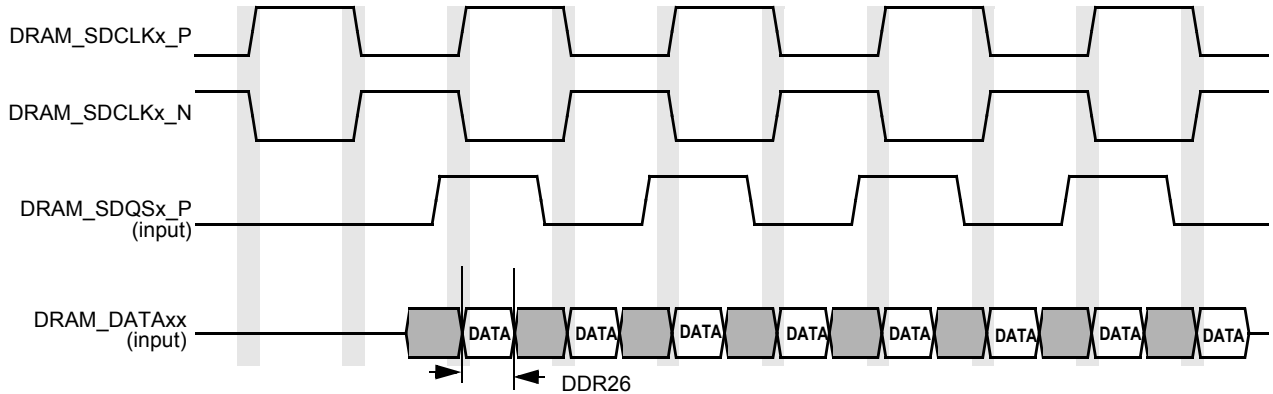

<sup>1</sup> To receive the reported setup and hold values, write calibration should be performed in order to locate the DRAM\_SDQSx\_P in the middle of DRAM\_DATAxx window.

<sup>2</sup> All measurements are in reference to Vref level.

<sup>3</sup> Measurements were taken using balanced load and 25 Ω resistor from outputs to DDR\_VREF.

**Electrical Characteristics**

Figure 23 shows the DDR3 read timing diagram. The timing parameters for this diagram appear in Table 43.

**Figure 23. DDR3 Read Cycle**

**Table 43. DDR3 Read Cycle**

| ID    | Parameter                                       | Symbol | CK = 400 MHz |     | Unit |
|-------|---|--------|--------------|-----|------|
|       |   |        | Min          | Max |      |
| DDR26 | Minimum required DRAM_DATAxx valid window width | —      | 450          | —   | ps   |

- <sup>1</sup> To receive the reported setup and hold values, read calibration should be performed in order to locate the DRAM\_SDQSx\_P in the middle of DRAM\_DATAxx window.
- <sup>2</sup> All measurements are in reference to Vref level.
- <sup>3</sup> Measurements were done using balanced load and 25 Ω resistor from outputs to VDD\_REF.

**4.9.4.2 LPDDR2 Parameters**

The i.MX 6UltraLite supports a maximum of two die loads on the data bus signals: SDCKE0/1 and CS0/1.

Figure 24 shows the LPDDR2 basic timing diagram. The timing parameters for this diagram appear in Table 44.

**Figure 24. LPDDR2 Command and Address Timing Diagram**

**Table 44. LPDDR2 Timing Parameter**

| ID  | Parameter                          | Symbol          | CK = 400 MHz |      | Unit            |
|-----|------------------------------------|-----------------|--------------|------|-----------------|
|     |                                    |                 | Min          | Max  |                 |

## Electrical Characteristics

- 1 To receive the reported setup and hold values, write calibration should be performed in order to locate the DRAM\_SDQS in the middle of DRAM\_DATAxx window.
- 2 All measurements are in reference to Vref level.
- 3 Measurements were done using balanced load and 25  $\Omega$  resistor from outputs to DDR\_VREF.

Figure 26 shows the LPDDR2 read timing diagram. The timing parameters for this diagram appear in Table 46.

Figure 26. LPDDR2 Read Cycle

Table 46. LPDDR2 Read Cycle

| ID   | Parameter  | Symbol | CK = 400 MHz |     | Unit |
|------|--|--------|--------------|-----|------|
|      |  |        | Min          | Max |      |
| LP26 | Minimum required DRAM_DATAxx valid window width for LPDDR2 | —      | 270          | —   | ps   |

- 1 To receive the reported setup and hold values, read calibration should be performed in order to locate the DRAM\_SDQSx\_P in the middle of DRAM\_DATA\_xx window.
- 2 All measurements are in reference to Vref level.
- 3 Measurements were done using balanced load and 25  $\Omega$  resistor from outputs to DDR\_VREF.

## 4.10 General-Purpose Media Interface (GPMI) Timing

The i.MX 6UltraLite GPMI controller is a flexible interface NAND Flash controller with 8-bit data width, up to 200 MB/s I/O speed and individual chip select.

It supports Asynchronous timing mode, Source Synchronous timing mode and Samsung Toggle timing mode separately described in the following subsections.

### 4.10.1 Asynchronous Mode AC Timing (ONFI 1.0 Compatible)

Asynchronous mode AC timings are provided as multiplications of the clock cycle and fixed delay. The maximum I/O speed of GPMI in asynchronous mode is about 50 MB/s. Figure 27 through Figure 30 depicts the relative timing between GPMI signals at the module level for different operations under asynchronous mode. Table 47 describes the timing parameters (NF1–NF17) that are shown in the figures.

| NF11 | NAND_WE_B hold time      | tWH              | $DH \times T$ [see <sup>2</sup> ]                 |  | ns   |
| NF12 | Ready to NAND_RE_B low   | tRR <sup>4</sup> | $(AS + 2) \times T$ [see <sup>3,2</sup> ]         | —  | ns   |
| NF13 | NAND_RE_B pulse width    | tRP              | $DS \times T$ [see <sup>2</sup> ]                 |  | ns   |
| NF14 | READ cycle time          | tRC              | $(DS + DH) \times T$ [see <sup>2</sup> ]          |  | ns   |
| NF15 | NAND_RE_B high hold time | tREH             | $DH \times T$ [see <sup>2</sup> ]                 |  | ns   |
| NF16 | Data setup on read       | tDSR             | —   | $(DS \times T - 0.67)/18.38$ [see <sup>5,6</sup> ] | ns   |
| NF17 | Data hold on read        | tDHR             | 0.82/11.83 [see <sup>5,6</sup> ]                  | —  | ns   |

<sup>1</sup> GPMI's Async Mode output timing can be controlled by the module's internal registers HW\_GPMI\_TIMING0\_ADDRESS\_SETUP, HW\_GPMI\_TIMING0\_DATA\_SETUP, and HW\_GPMI\_TIMING0\_DATA\_HOLD. This AC timing depends on these registers settings. In the table, AS/DS/DH represents each of these settings.

<sup>2</sup> AS minimum value can be 0, while DS/DH minimum value is 1.

<sup>3</sup> T = GPMI clock period - 0.075ns (half of maximum p-p jitter).

<sup>4</sup> NF12 is guaranteed by the design.

<sup>5</sup> Non-EDO mode.

<sup>6</sup> EDO mode, GPMI clock  $\approx$  100 MHz  
(AS=DS=DH=1, GPMI\_CTL1 [RDN\_DELAY] = 8, GPMI\_CTL1 [HALF\_PERIOD] = 0).

In EDO mode (Figure 30), NF16/NF17 is different from the definition in non-EDO mode (Figure 29). They are called tREA/tRHOH (RE# access time/RE# HIGH to output hold). The typical values for them are 16 ns (max for tREA)/15 ns (min for tRHOH) at 50 MB/s EDO mode. In EDO mode, GPMI will sample NAND\_DATAxx at rising edge of delayed NAND\_RE\_B provided by an internal DPLL. The delay value can be controlled by GPMI\_CTRL1.RDN\_DELAY (see the GPMI chapter of the *i.MX 6UltraLite Reference Manual*). The typical value of this control register is 0x8 at 50 MT/s EDO mode. But if the board delay is big enough and cannot be ignored, the delay value should be made larger to compensate the board delay.

### 4.10.2 Source Synchronous Mode AC Timing (ONFI 2.x Compatible)

Figure 32 to Figure 34 show the write and read timing of Source Synchronous Mode.

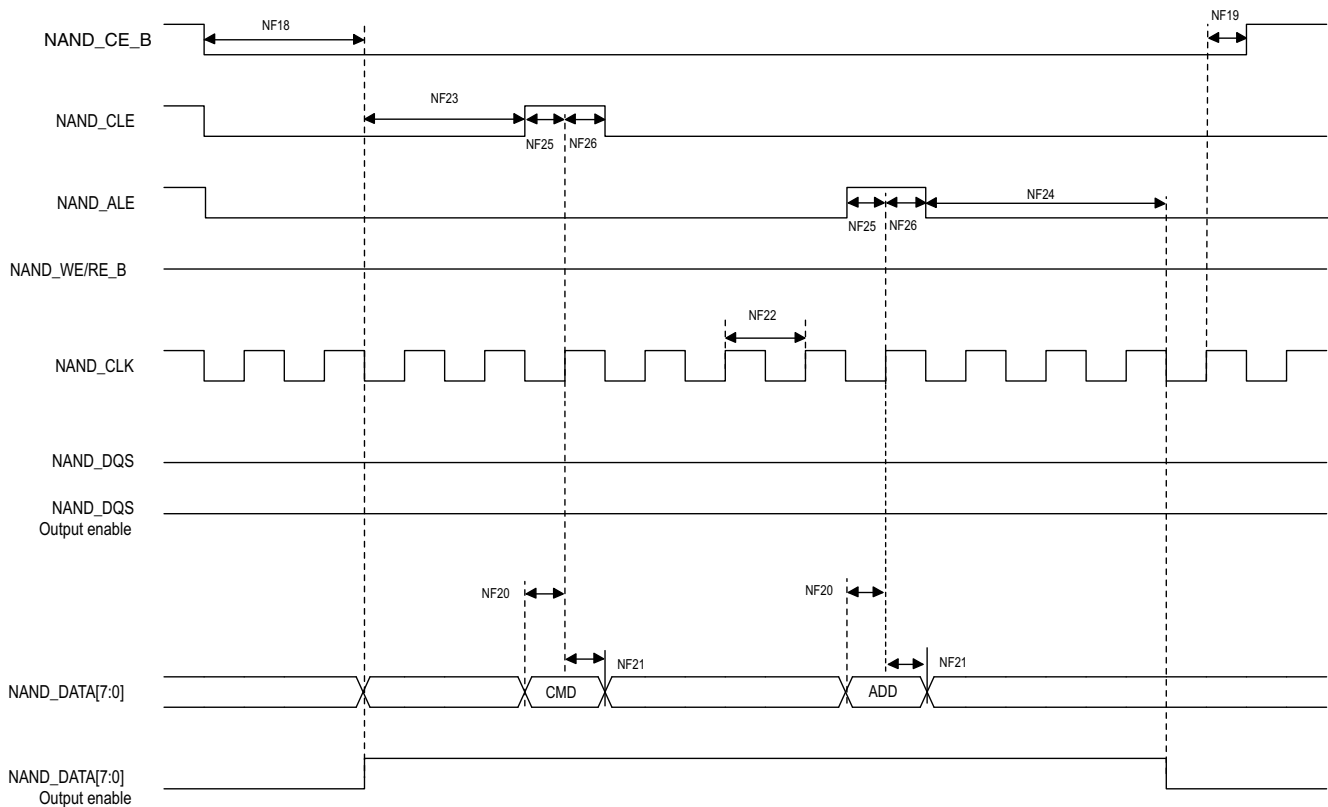

Figure 32. Source Synchronous Mode Command and Address Timing Diagram

## Electrical Characteristics

**Figure 33. Source Synchronous Mode Data Write Timing Diagram**

**Figure 34. Source Synchronous Mode Data Read Timing Diagram**

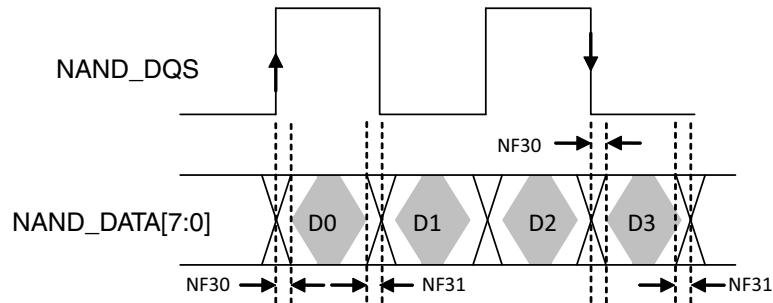

Figure 35. NAND\_DQS/NAND\_DQ Read Valid Window

Table 48. Source Synchronous Mode Timing Parameters<sup>1</sup>

| ID   | Parameter                                      | Symbol | Timing<br>T = GPMI Clock Cycle            |      | Unit |
|------|--|--------|---|------|------|
|      |  |        | Min.                                      | Max. |      |
| NF18 | NAND_CE0_B access time                         | tCE    | CE_DELAY × T - 0.79 [see <sup>2</sup> ]   |      | ns   |
| NF19 | NAND_CE0_B hold time                           | tCH    | 0.5 × tCK - 0.63 [see <sup>2</sup> ]      |      | ns   |
| NF20 | Command/address NAND_DATAxx setup time         | tCAS   | 0.5 × tCK - 0.05                          |      | ns   |
| NF21 | Command/address NAND_DATAxx hold time          | tCAH   | 0.5 × tCK - 1.23                          |      | ns   |
| NF22 | Clock period                                   | tCK    | —   |      | ns   |
| NF23 | Preamble delay                                 | tPRE   | PRE_DELAY × T - 0.29 [see <sup>2</sup> ]  |      | ns   |
| NF24 | Postamble delay                                | tPOST  | POST_DELAY × T - 0.78 [see <sup>2</sup> ] |      | ns   |
| NF25 | NAND_CLE and NAND_ALE setup time               | tCALS  | 0.5 × tCK - 0.86                          |      | ns   |
| NF26 | NAND_CLE and NAND_ALE hold time                | tCALH  | 0.5 × tCK - 0.37                          |      | ns   |
| NF27 | NAND_CLK to first NAND_DQS latching transition | tDQSS  | T - 0.41 [see <sup>2</sup> ]              |      | ns   |
| NF28 | Data write setup                               | —      | 0.25 × tCK - 0.35                         |      | —    |
| NF29 | Data write hold                                | —      | 0.25 × tCK - 0.85                         |      | —    |
| NF30 | NAND_DQS/NAND_DQ read setup skew               | —      | —   | 2.06 | —    |
| NF31 | NAND_DQS/NAND_DQ read hold skew                | —      | —   | 1.95 | —    |

<sup>1</sup> GPMI's source synchronous mode output timing can be controlled by the module's internal registers GPMI\_TIMING2\_CE\_DELAY, GPMI\_TIMING2\_PREAMBLE\_DELAY, GPMI\_TIMING2\_POST\_DELAY. This AC timing depends on these registers settings. In the table, CE\_DELAY/PRE\_DELAY/POST\_DELAY represents each of these settings.

<sup>2</sup> T = tCK(GPMI clock period) - 0.075ns (half of maximum p-p jitter).

For DDR Source sync mode, Figure 35 shows the timing diagram of NAND\_DQS/NAND\_DATAxx read valid window. The typical value of tDQSQ is 0.85ns (max) and 1ns (max) for tQHS at 200MB/s. GPMI will sample NAND\_DATA[7:0] at both rising and falling edge of a delayed NAND\_DQS signal, which can be provided by an internal DPLL. The delay value can be controlled by GPMI register GPMI\_READ\_DDR\_DLL\_CTRL.SLV\_DLY\_TARGET (see the GPMI chapter of the *i.MX 6UltraLite Reference Manual*). Generally, the typical delay value of this register is equal to 0x7 which means 1/4 clock cycle delay expected. But if the board delay is big enough and cannot be ignored, the delay value should be made larger to compensate the board delay.

### 4.10.3 Samsung Toggle Mode AC Timing

#### 4.10.3.1 Command and Address Timing

**NOTE**

Samsung Toggle Mode command and address timing is the same as ONFI 1.0 compatible Async mode AC timing. See [Section 4.10.1, “Asynchronous Mode AC Timing \(ONFI 1.0 Compatible\),”](#) for details.

#### 4.10.3.2 Read and Write Timing

**Figure 36. Samsung Toggle Mode Data Write Timing**

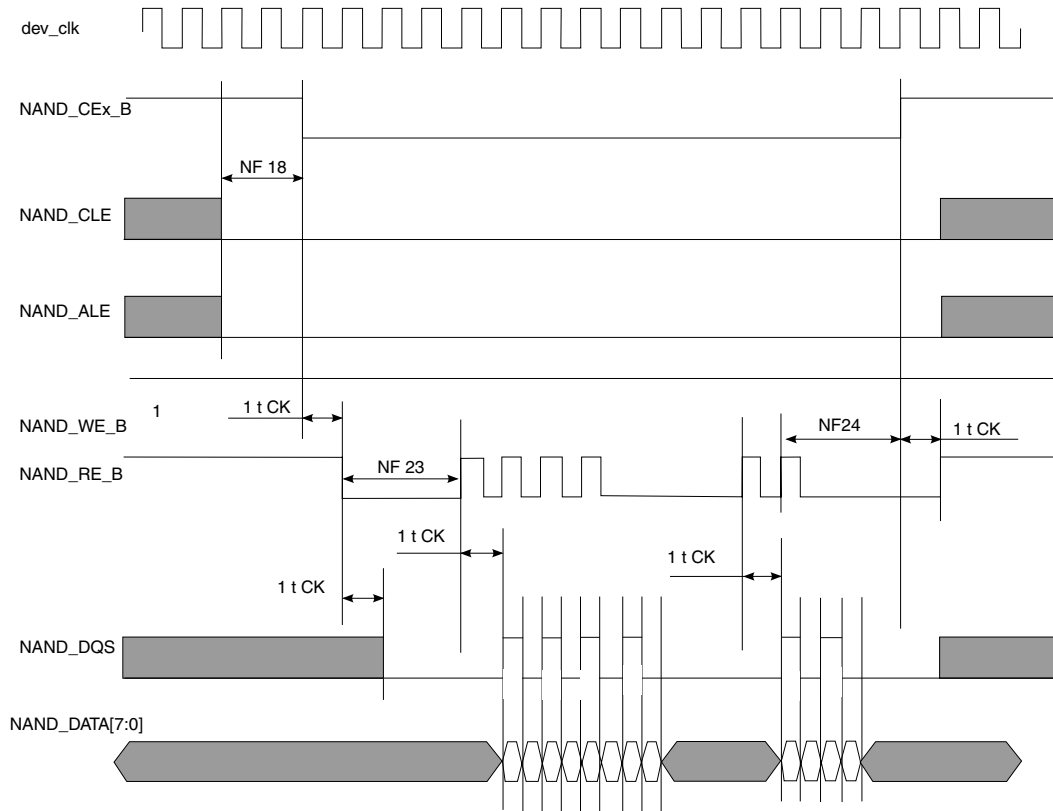

Figure 37. Samsung Toggle Mode Data Read Timing

Table 49. Samsung Toggle Mode Timing Parameters<sup>1</sup>

| ID   | Parameter                              | Symbol | Timing<br>T = GPML Clock Cycle                    |      | Unit |
|------|--|--------|---|------|------|
|      |  |        | Min.  | Max. |      |
| NF1  | NAND_CLE setup time                    | tCLS   | $(AS + DS) \times T - 0.12$ [see <sup>2,3</sup> ] |      | —    |
| NF2  | NAND_CLE hold time                     | tCLH   | $DH \times T - 0.72$ [see <sup>2</sup> ]          |      | —    |
| NF3  | NAND_CE0_B setup time                  | tCS    | $(AS + DS) \times T - 0.58$ [see <sup>3,2</sup> ] |      | —    |
| NF4  | NAND_CE0_B hold time                   | tCH    | $DH \times T - 1$ [see <sup>2</sup> ]             |      | —    |
| NF5  | NAND_WE_B pulse width                  | tWP    | $DS \times T$ [see <sup>2</sup> ]                 |      | —    |
| NF6  | NAND_ALE setup time                    | tALS   | $(AS + DS) \times T - 0.49$ [see <sup>3,2</sup> ] |      | —    |
| NF7  | NAND_ALE hold time                     | tALH   | $DH \times T - 0.42$ [see <sup>2</sup> ]          |      | —    |
| NF8  | Command/address NAND_DATAxx setup time | tCAS   | $DS \times T - 0.26$ [see <sup>2</sup> ]          |      | —    |
| NF9  | Command/address NAND_DATAxx hold time  | tCAH   | $DH \times T - 1.37$ [see <sup>2</sup> ]          |      | —    |
| NF18 | NAND_CEx_B access time                 | tCE    | $CE\_DELAY \times T$ [see <sup>4,2</sup> ]        | —    | ns   |
| NF22 | Clock period                           | tCK    | —   | —    | ns   |
| NF23 | Preamble delay                         | tPRE   | $PRE\_DELAY \times T$ [see <sup>5,2</sup> ]       | —    | ns   |
| NF24 | Postamble delay                        | tPOST  | $POST\_DELAY \times T + 0.43$ [see <sup>2</sup> ] | —    | ns   |

Table 49. Samsung Toggle Mode Timing Parameters<sup>1</sup> (continued)

| ID   | Parameter                        | Symbol             | Timing<br>T = GPMI Clock Cycle |      | Unit |
|------|----------------------------------|--------------------|--------------------------------|------|------|
|      |                                  |                    | Min.                           | Max. |      |
| NF28 | Data write setup                 | tDS <sup>6</sup>   | 0.25 × tCK - 0.32              | —    | ns   |
| NF29 | Data write hold                  | tDH <sup>6</sup>   | 0.25 × tCK - 0.79              | —    | ns   |
| NF30 | NAND_DQS/NAND_DQ read setup skew | tDQSQ <sup>7</sup> | —                              | 3.18 | —    |
| NF31 | NAND_DQS/NAND_DQ read hold skew  | tQHS <sup>7</sup>  | —                              | 3.27 | —    |

<sup>1</sup> The GPMI toggle mode output timing can be controlled by the module's internal registers HW\_GPMI\_TIMING0\_ADDRESS\_SETUP, HW\_GPMI\_TIMING0\_DATA\_SETUP, and HW\_GPMI\_TIMING0\_DATA\_HOLD. This AC timing depends on these registers settings. In the table, AS/DS/DH represents each of these settings.

<sup>2</sup> AS minimum value can be 0, while DS/DH minimum value is 1.

<sup>3</sup> T = tCK (GPMI clock period) - 0.075ns (half of maximum p-p jitter).

<sup>4</sup> CE\_DELAY represents HW\_GPMI\_TIMING2[CE\_DELAY]. NF18 is guaranteed by the design. Read/Write operation is started with enough time of ALE/CLE assertion to low level.

<sup>5</sup> PRE\_DELAY+1) ≥ (AS+DS)

<sup>6</sup> Shown in [Figure 36](#).

<sup>7</sup> Shown in [Figure 37](#).

For DDR Toggle mode, [Figure 35](#) shows the timing diagram of NAND\_DQS/NAND\_DATA<sub>xx</sub> read valid window. The typical value of tDQSQ is 1.4 ns (max) and 1.4 ns (max) for tQHS at 133 MB/s. GPMI will sample NAND\_DATA[7:0] at both rising and falling edge of an delayed NAND\_DQS signal, which is provided by an internal DPLL. The delay value of this register can be controlled by GPMI register GPMI\_READ\_DDR\_DLL\_CTRL.SLV\_DLY\_TARGET (see the GPMI chapter of the *i.MX 6UltraLite Reference Manual*). Generally, the typical delay value is equal to 0x7 which means 1/4 clock cycle delay expected. But if the board delay is big enough and cannot be ignored, the delay value should be made larger to compensate the board delay.

## 4.11 External Peripheral Interface Parameters

The following subsections provide information on external peripheral interfaces.

### 4.11.1 CMOS Sensor Interface (CSI) Timing Parameters

#### 4.11.1.0.1 Gated Clock Mode Timing

[Figure 38](#) and [Figure 39](#) shows the gated clock mode timings for CSI, and [Table 50](#) describes the timing parameters (P1–P7) shown in the figures. A frame starts with a rising/falling edge on CSI\_VSYNC

(VSYNC), then CSI\_HSYNC (HSYNC) is asserted and holds for the entire line. The pixel clock, CSI\_PIXCLK (PIXCLK), is valid as long as HSYNC is asserted.

Figure 38. CSI Gated Clock Mode—Sensor Data at Falling Edge, Latch Data at Rising Edge

Figure 39. CSI Gated Clock Mode—Sensor Data at Rising Edge, Latch Data at Falling Edge

Table 50. CSI Gated Clock Mode Timing Parameters

| ID | Parameter                   | Symbol | Min. | Max. | Units |
|----|-----------------------------|--------|------|------|-------|
| P1 | CSI_VSYNC to CSI_HSYNC time | tV2H   | 33.5 | —    | ns    |
| P2 | CSI_HSYNC setup time        | tHsu   | 1    | —    | ns    |
| P3 | CSI DATA setup time         | tDsu   | 1    | —    | ns    |

**Table 50. CSI Gated Clock Mode Timing Parameters (continued)**

| ID | Parameter                 | Symbol | Min. | Max. | Units |
|----|---------------------------|--------|------|------|-------|
| P4 | CSI DATA hold time        | tDh    | 1    | —    | ns    |
| P5 | CSI pixel clock high time | tCLKh  | 3.75 | —    | ns    |
| P6 | CSI pixel clock low time  | tCLKl  | 3.75 | —    | ns    |
| P7 | CSI pixel clock frequency | fCLK   | —    | 133  | MHz   |

**4.11.1.0.2 Ungated Clock Mode Timing**

Figure 40 shows the ungated clock mode timings of CSI, and Table 51 describes the timing parameters (P1–P6) that are shown in the figure. In ungated mode the CSI\_VSYNC and CSI\_PIXCLK signals are used, and the CSI\_HSYNC signal is ignored.

**Figure 40. CSI Ungated Clock Mode—Sensor Data at Falling Edge, Latch Data at Rising Edge**

**Table 51. CSI Ungated Clock Mode Timing Parameters**

| ID | Parameter                     | Symbol | Min. | Max. | Units |
|----|-------------------------------|--------|------|------|-------|
| P1 | CSI_VSYNC to pixel clock time | tVSYNC | 33.5 | —    | ns    |
| P2 | CSI DATA setup time           | tDsu   | 1    | —    | ns    |
| P3 | CSI DATA hold time            | tDh    | 1    | —    | ns    |
| P4 | CSI pixel clock high time     | tCLKh  | 3.75 | —    | ns    |
| P5 | CSI pixel clock low time      | tCLKl  | 3.75 | —    | ns    |
| P6 | CSI pixel clock frequency     | fCLK   | —    | 133  | MHz   |

The CSI enables the chip to connect directly to external CMOS image sensors, which are classified as dumb or smart as follows:

- Dumb sensors only support traditional sensor timing (vertical sync (VSYNC) and horizontal sync (HSYNC)) and output-only Bayer and statistics data.
- Smart sensors support CCIR656 video decoder formats and perform additional processing of the image (for example, image compression, image pre-filtering, and various data output formats).

The following subsections describe the CSI timing in gated and ungated clock modes.

## 4.11.2 ECSPi Timing Parameters

This section describes the timing parameters of the ECSPi blocks. The ECSPi have separate timing parameters for master and slave modes.

### 4.11.2.1 ECSPi Master Mode Timing

Figure 41 depicts the timing of ECSPi in master mode. Table 52 lists the ECSPi master mode timing characteristics.

Figure 41. ECSPi Master Mode Timing Diagram

Table 52. ECSPi Master Mode Timing Parameters

| ID   | Parameter   | Symbol          | Min                        | Max | Unit |
|------|---|-----------------|----------------------------|-----|------|
| CS1  | ECSPi_SCLK Cycle Time–Read<br>ECSPi_SCLK Cycle Time–Write             | $t_{clk}$       | 43<br>15                   | —   | ns   |
| CS2  | ECSPi_SCLK High or Low Time–Read<br>ECSPi_SCLK High or Low Time–Write | $t_{sw}$        | 21.5<br>7                  | —   | ns   |
| CS3  | ECSPi_SCLK Rise or Fall <sup>1</sup>                                  | $t_{RISE/FALL}$ | —                          | —   | ns   |
| CS4  | ECSPi_SS_B pulse width  | $t_{CSLH}$      | Half ECSPi_SCLK period     | —   | ns   |
| CS5  | ECSPi_SS_B Lead Time (CS setup time)                                  | $t_{SCS}$       | Half ECSPi_SCLK period - 4 | —   | ns   |
| CS6  | ECSPi_SS_B Lag Time (CS hold time)                                    | $t_{HCS}$       | Half ECSPi_SCLK period - 2 | —   | ns   |
| CS7  | ECSPi_MOSI Propagation Delay ( $C_{LOAD} = 20$ pF)                    | $t_{PDmosi}$    | -1                         | 1   | ns   |
| CS8  | ECSPi_MISO Setup Time   | $t_{Smiso}$     | 14                         | —   | ns   |
| CS9  | ECSPi_MISO Hold Time  | $t_{Hmiso}$     | 0                          | —   | ns   |
| CS10 | RDY to ECSPi_SS_B Time <sup>2</sup>                                   | $t_{SDRY}$      | 5                          | —   | ns   |

<sup>1</sup> See specific I/O AC parameters Section 4.7, “I/O AC Parameters.”

## Electrical Characteristics

<sup>2</sup> SPI\_RDY is sampled internally by ipg\_clk and is asynchronous to all other CSPI signals.

### 4.11.2.2 ECSPi Slave Mode Timing

Figure 42 depicts the timing of ECSPi in slave mode. Table 53 lists the ECSPi slave mode timing characteristics.

Figure 42. ECSPi Slave Mode Timing Diagram

Table 53. ECSPi Slave Mode Timing Parameters

| ID  | Parameter   | Symbol       | Min                    | Max | Unit |
|-----|---|--------------|------------------------|-----|------|
| CS1 | ECSPi_SCLK Cycle Time–Read<br>ECSPi_SCLK Cycle Time–Write             | $t_{clk}$    | 15<br>43               | —   | ns   |
| CS2 | ECSPi_SCLK High or Low Time–Read<br>ECSPi_SCLK High or Low Time–Write | $t_{sw}$     | 7<br>21.5              | —   | ns   |
| CS4 | ECSPi_SS_B pulse width  | $t_{CSLH}$   | Half ECSPi_SCLK period | —   | ns   |
| CS5 | ECSPi_SS_B Lead Time (CS setup time)                                  | $t_{SCS}$    | 5                      | —   | ns   |
| CS6 | ECSPi_SS_B Lag Time (CS hold time)                                    | $t_{HCS}$    | 5                      | —   | ns   |
| CS7 | ECSPi_MOSI Setup Time   | $t_{smosi}$  | 4                      | —   | ns   |
| CS8 | ECSPi_MOSI Hold Time  | $t_{Hmosi}$  | 4                      | —   | ns   |
| CS9 | ECSPi_MISO Propagation Delay ( $C_{LOAD} = 20$ pF)                    | $t_{PDmiso}$ | 4                      | 19  | ns   |

### 4.11.3 Ultra High Speed SD/SDIO/MMC Host Interface (uSDHC) AC timing

This section describes the electrical information of the uSDHC, which includes SD/eMMC4.3 (Single Data Rate) timing, eMMC4.4/4.41/4.5 (Dual Data Rate) timing and SDR104/50(SD3.0) timing.

#### 4.11.3.1 SD/eMMC4.3 (Single Data Rate) AC Timing

Figure 43 depicts the timing of SD/eMMC4.3, and Table 54 lists the SD/eMMC4.3 timing characteristics.

Figure 43. SD/eMMC4.3 Timing

Table 54. SD/eMMC4.3 Interface Timing Specification

| ID   | Parameter                                       | Symbols    | Min  | Max   | Unit |
|--|---|------------|------|-------|------|
| <b>Card Input Clock</b>  |   |            |      |       |      |
| SD1  | Clock Frequency (Low Speed)                     | $f_{PP}^1$ | 0    | 400   | kHz  |
|  | Clock Frequency (SD/SDIO Full Speed/High Speed) | $f_{PP}^2$ | 0    | 25/50 | MHz  |
|  | Clock Frequency (MMC Full Speed/High Speed)     | $f_{PP}^3$ | 0    | 20/52 | MHz  |
|  | Clock Frequency (Identification Mode)           | $f_{OD}$   | 100  | 400   | kHz  |
| SD2  | Clock Low Time                                  | $t_{WL}$   | 7    | —     | ns   |
| SD3  | Clock High Time                                 | $t_{WH}$   | 7    | —     | ns   |
| SD4  | Clock Rise Time                                 | $t_{TLH}$  | —    | 3     | ns   |
| SD5  | Clock Fall Time                                 | $t_{THL}$  | —    | 3     | ns   |
| <b>uSDHC Output/Card Inputs SD_CMD, SDx_DATAx (Reference to CLK)</b> |   |            |      |       |      |
| SD6  | uSDHC Output Delay                              | $t_{OD}$   | -6.6 | 3.6   | ns   |

**Table 54. SD/eMMC4.3 Interface Timing Specification (continued)**

| ID   | Parameter                          | Symbols   | Min | Max | Unit |
|--|------------------------------------|-----------|-----|-----|------|
| <b>uSDHC Input/Card Outputs SD_CMD, SDx_DATAx (Reference to CLK)</b> |                                    |           |     |     |      |
| SD7  | uSDHC Input Setup Time             | $t_{ISU}$ | 2.5 | —   | ns   |
| SD8  | uSDHC Input Hold Time <sup>4</sup> | $t_{IH}$  | 1.5 | —   | ns   |

- <sup>1</sup> In low speed mode, card clock must be lower than 400 kHz, voltage ranges from 2.7 to 3.6 V.
- <sup>2</sup> In normal (full) speed mode for SD/SDIO card, clock frequency can be any value between 0–25 MHz. In high-speed mode, clock frequency can be any value between 0–50 MHz.
- <sup>3</sup> In normal (full) speed mode for MMC card, clock frequency can be any value between 0–20 MHz. In high-speed mode, clock frequency can be any value between 0–52 MHz.
- <sup>4</sup> To satisfy hold timing, the delay difference between clock input and cmd/data input must not exceed 2 ns.

### 4.11.3.2 eMMC4.4/4.41 (Dual Data Rate) AC Timing

Figure 44 depicts the timing of eMMC4.4/4.41. Table 55 lists the eMMC4.4/4.41 timing characteristics. Be aware that only DATA is sampled on both edges of the clock (not applicable to CMD).

**Figure 44. eMMC4.4/4.41 Timing**

**Table 55. eMMC4.4/4.41 Interface Timing Specification**

| ID   | Parameter                          | Symbols   | Min | Max | Unit |
|--|------------------------------------|-----------|-----|-----|------|
| <b>Card Input Clock</b>  |                                    |           |     |     |      |
| SD1  | Clock Frequency (eMMC4.4/4.41 DDR) | $f_{PP}$  | 0   | 52  | MHz  |
| SD1  | Clock Frequency (SD3.0 DDR)        | $f_{PP}$  | 0   | 50  | MHz  |
| <b>uSDHC Output / Card Inputs SD_CMD, SDx_DATAx (Reference to CLK)</b> |                                    |           |     |     |      |
| SD2  | uSDHC Output Delay                 | $t_{OD}$  | 2.5 | 7.1 | ns   |
| <b>uSDHC Input / Card Outputs SD_CMD, SDx_DATAx (Reference to CLK)</b> |                                    |           |     |     |      |
| SD3  | uSDHC Input Setup Time             | $t_{ISU}$ | 2.6 | —   | ns   |
| SD4  | uSDHC Input Hold Time              | $t_{IH}$  | 1.5 | —   | ns   |

### 4.11.3.3 SDR50/SDR104 AC Timing

Figure 45 depicts the timing of SDR50/SDR104, and Table 56 lists the SDR50/SDR104 timing characteristics.

Figure 45. SDR50/SDR104 Timing

Table 56. SDR50/SDR104 Interface Timing Specification

| ID   | Parameter               | Symbols   | Min            | Max            | Unit |
|--|-------------------------|-----------|----------------|----------------|------|
| <b>Card Input Clock</b>  |                         |           |                |                |      |
| SD1  | Clock Frequency Period  | $t_{CLK}$ | 5.0            | —              | ns   |
| SD2  | Clock Low Time          | $t_{CL}$  | $0.46*t_{CLK}$ | $0.54*t_{CLK}$ | ns   |
| SD3  | Clock High Time         | $t_{CH}$  | $0.46*t_{CLK}$ | $0.54*t_{CLK}$ | ns   |
| <b>uSDHC Output/Card Inputs SD_CMD, SDx_DATAx in SDR50 (Reference to CLK)</b>              |                         |           |                |                |      |
| SD4  | uSDHC Output Delay      | $t_{OD}$  | -3             | 1              | ns   |
| <b>uSDHC Output/Card Inputs SD_CMD, SDx_DATAx in SDR104 (Reference to CLK)</b>             |                         |           |                |                |      |
| SD5  | uSDHC Output Delay      | $t_{OD}$  | -1.6           | 1              | ns   |
| <b>uSDHC Input/Card Outputs SD_CMD, SDx_DATAx in SDR50 (Reference to CLK)</b>              |                         |           |                |                |      |
| SD6  | uSDHC Input Setup Time  | $t_{ISU}$ | 2.5            | —              | ns   |
| SD7  | uSDHC Input Hold Time   | $t_{IH}$  | 1.5            | —              | ns   |
| <b>uSDHC Input/Card Outputs SD_CMD, SDx_DATAx in SDR104 (Reference to CLK)<sup>1</sup></b> |                         |           |                |                |      |
| SD8  | Card Output Data Window | $t_{ODW}$ | $0.5*t_{CLK}$  | —              | ns   |

<sup>1</sup>Data window in SDR104 mode is variable.

### 4.11.3.4 HS200 Mode Timing

Figure 46 depicts the timing of HS200 mode, and Table 57 lists the HS200 timing characteristics.

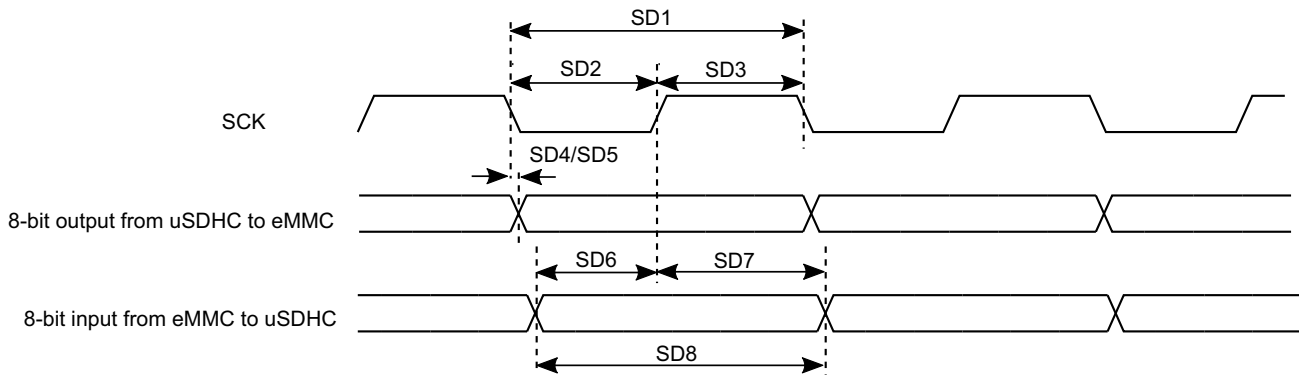

Figure 46. HS200 Mode Timing

Table 57. HS200 Interface Timing Specification

| ID  | Parameter               | Symbols   | Min                 | Max                 | Unit |
|---|-------------------------|-----------|---------------------|---------------------|------|
| <b>Card Input Clock</b>   |                         |           |                     |                     |      |
| SD1   | Clock Frequency Period  | $t_{CLK}$ | 5.0                 | —                   | ns   |
| SD2   | Clock Low Time          | $t_{CL}$  | $0.3 \cdot t_{CLK}$ | $0.7 \cdot t_{CLK}$ | ns   |
| SD2   | Clock High Time         | $t_{CH}$  | $0.3 \cdot t_{CLK}$ | $0.7 \cdot t_{CLK}$ | ns   |
| <b>uSDHC Output/Card Inputs SD_CMD, SDx_DATAx in HS200 (Reference to CLK)</b>             |                         |           |                     |                     |      |
| SD5   | uSDHC Output Delay      | $t_{OD}$  | -1.6                | 1                   | ns   |
| <b>uSDHC Input/Card Outputs SD_CMD, SDx_DATAx in HS200 (Reference to CLK)<sup>1</sup></b> |                         |           |                     |                     |      |
| SD8   | Card Output Data Window | $t_{ODW}$ | $0.5 \cdot t_{CLK}$ | —                   | ns   |

<sup>1</sup>HS200 is for 8 bits while SDR104 is for 4 bits.

### 4.11.3.5 Bus Operation Condition for 3.3 V and 1.8 V Signaling

Signaling level of SD/eMMC4.3 and eMMC4.4/4.41 modes is 3.3 V. Signaling level of SDR104/SDR50 mode is 1.8 V. The DC parameters for the NVCC\_SD1 supply are identical to those shown in Table 24, "Single Voltage GPIO DC Parameters," on page 34.

### 4.11.4 Ethernet Controller (ENET) AC Electrical Specifications

The following timing specs are defined at the chip I/O pin and must be translated appropriately to arrive at timing specs/constraints for the physical interface.

#### 4.11.4.1 ENET MII Mode Timing

This subsection describes MII receive, transmit, asynchronous inputs, and serial management signal timings.

##### 4.11.4.1.1 MII Receive Signal Timing (ENET\_RX\_DATA3,2,1,0, ENET\_RX\_EN, ENET\_RX\_ER, and ENET\_RX\_CLK)

The receiver functions correctly up to an ENET\_RX\_CLK maximum frequency of 25 MHz + 1%. There is no minimum frequency requirement. Additionally, the processor clock frequency must exceed twice the ENET\_RX\_CLK frequency.

Figure 47 shows MII receive signal timings. Table 58 describes the timing parameters (M1–M4) shown in the figure.

Figure 47. MII Receive Signal Timing Diagram

Table 58. MII Receive Signal Timing

| ID | Characteristic <sup>1</sup>                                      | Min. | Max. | Unit               |
|----|--|------|------|--------------------|
| M1 | ENET_RX_DATA3,2,1,0, ENET_RX_EN, ENET_RX_ER to ENET_RX_CLK setup | 5    | —    | ns                 |
| M2 | ENET_RX_CLK to ENET_RX_DATA3,2,1,0, ENET_RX_EN, ENET_RX_ER hold  | 5    | —    | ns                 |
| M3 | ENET_RX_CLK pulse width high                                     | 35%  | 65%  | ENET_RX_CLK period |
| M4 | ENET_RX_CLK pulse width low                                      | 35%  | 65%  | ENET_RX_CLK period |

<sup>1</sup> ENET\_RX\_EN, ENET\_RX\_CLK, and ENET0\_RXD0 have the same timing in 10 Mbps 7-wire interface mode.

##### 4.11.4.1.2 MII Transmit Signal Timing (ENET\_TX\_DATA3,2,1,0, ENET\_TX\_EN, ENET\_TX\_ER, and ENET\_TX\_CLK)

The transmitter functions correctly up to an ENET\_TX\_CLK maximum frequency of 25 MHz + 1%. There is no minimum frequency requirement. Additionally, the processor clock frequency must exceed twice the ENET\_TX\_CLK frequency.

## Electrical Characteristics

Figure 48 shows MII transmit signal timings. Table 59 describes the timing parameters (M5–M8) shown in the figure.

Figure 48. MII Transmit Signal Timing Diagram

Table 59. MII Transmit Signal Timing

| ID | Characteristic <sup>1</sup>  | Min. | Max. | Unit               |
|----|--|------|------|--------------------|
| M5 | ENET_TX_CLK to ENET_TX_DATA3,2,1,0, ENET_TX_EN, ENET_TX_ER invalid | 5    | —    | ns                 |
| M6 | ENET_TX_CLK to ENET_TX_DATA3,2,1,0, ENET_TX_EN, ENET_TX_ER valid   | —    | 20   | ns                 |
| M7 | ENET_TX_CLK pulse width high                                       | 35%  | 65%  | ENET_TX_CLK period |
| M8 | ENET_TX_CLK pulse width low  | 35%  | 65%  | ENET_TX_CLK period |

<sup>1</sup> ENET\_TX\_EN, ENET\_TX\_CLK, and ENET0\_TXD0 have the same timing in 10-Mbps 7-wire interface mode.

### 4.11.4.1.3 MII Asynchronous Inputs Signal Timing (ENET\_CRS and ENET\_COL)

Figure 49 shows MII asynchronous input timings. Table 60 describes the timing parameter (M9) shown in the figure.

Figure 49. MII Async Inputs Timing Diagram

Table 60. MII Asynchronous Inputs Signal Timing

| ID              | Characteristic                           | Min. | Max. | Unit               |
|-----------------|--|------|------|--------------------|
| M9 <sup>1</sup> | ENET_CRS to ENET_COL minimum pulse width | 1.5  | —    | ENET_TX_CLK period |

<sup>1</sup> ENET\_COL has the same timing in 10-Mbit 7-wire interface mode.

#### 4.11.4.1.4 MII Serial Management Channel Timing (ENET\_MDIO and ENET\_MDC)

The MDC frequency is designed to be equal to or less than 2.5 MHz to be compatible with the IEEE 802.3 MII specification. However the ENET can function correctly with a maximum MDC frequency of 15 MHz.

Figure 50 shows MII asynchronous input timings. Table 61 describes the timing parameters (M10–M15) shown in the figure.

Figure 50. MII Serial Management Channel Timing Diagram

Table 61. MII Serial Management Channel Timing

| ID  | Characteristic   | Min. | Max. | Unit            |
|-----|--|------|------|-----------------|
| M10 | ENET_MDC falling edge to ENET_MDIO output invalid (min. propagation delay) | 0    | —    | ns              |
| M11 | ENET_MDC falling edge to ENET_MDIO output valid (max. propagation delay)   | —    | 5    | ns              |
| M12 | ENET_MDIO (input) to ENET_MDC rising edge setup                            | 18   | —    | ns              |
| M13 | ENET_MDIO (input) to ENET_MDC rising edge hold                             | 0    | —    | ns              |
| M14 | ENET_MDC pulse width high  | 40%  | 60%  | ENET_MDC period |
| M15 | ENET_MDC pulse width low   | 40%  | 60%  | ENET_MDC period |

#### 4.11.4.2 RMII Mode Timing

In RMII mode, ENET\_CLK is used as the REF\_CLK, which is a 50 MHz  $\pm$  50 ppm continuous reference clock. ENET\_RX\_EN is used as the ENET\_RX\_EN in RMII. Other signals under RMII mode include ENET\_TX\_EN, ENET\_TX\_DATA[1:0], ENET\_RX\_DATA[1:0] and ENET\_RX\_ER.

Figure 51 shows RMI mode timings. Table 62 describes the timing parameters (M16–M21) shown in the figure.

Figure 51. RMI Mode Signal Timing Diagram

Table 62. RMI Signal Timing

| ID  | Characteristic   | Min. | Max. | Unit            |
|-----|--|------|------|-----------------|
| M16 | ENET_CLK pulse width high  | 35%  | 65%  | ENET_CLK period |
| M17 | ENET_CLK pulse width low   | 35%  | 65%  | ENET_CLK period |
| M18 | ENET_CLK to ENET0_TXD[1:0], ENET_TX_DATA invalid                         | 4    | —    | ns              |
| M19 | ENET_CLK to ENET0_TXD[1:0], ENET_TX_DATA valid                           | —    | 13   | ns              |
| M20 | ENET_RX_DATAD[1:0], ENET_RX_EN(ENET_RX_EN), ENET_RX_ER to ENET_CLK setup | 2    | —    | ns              |
| M21 | ENET_CLK to ENET_RX_DATAD[1:0], ENET_RX_EN, ENET_RX_ER hold              | 2    | —    | ns              |

#### 4.11.5 Flexible Controller Area Network (FLEXCAN) AC Electrical Specifications

The Flexible Controller Area Network (FlexCAN) module is a communication controller implementing the CAN protocol according to the CAN 2.0B protocol specification. The processor has two CAN modules available for systems design. Tx and Rx ports for both modules are multiplexed with other I/O pins. See the IOMUXC chapter of the *i.MX 6UltraLite Reference Manual (IMX6ULRM)* to see which pins expose Tx and Rx pins; these ports are named FLEXCAN\_TX and FLEXCAN\_RX, respectively.

### 4.11.6 I<sup>2</sup>C Module Timing Parameters

This section describes the timing parameters of the I<sup>2</sup>C module. Figure 52 depicts the timing of I<sup>2</sup>C module, and Table 63 lists the I<sup>2</sup>C module timing characteristics.

Figure 52. I<sup>2</sup>C Bus Timing

Table 63. I<sup>2</sup>C Module Timing Parameters

| ID   | Parameter   | Standard Mode  |                   | Fast Mode                           |                  | Unit |
|------|---|----------------|-------------------|-------------------------------------|------------------|------|
|      |   | Min            | Max               | Min                                 | Max              |      |
| IC1  | I2Cx_SCL cycle time                                 | 10             | —                 | 2.5                                 | —                | μs   |
| IC2  | Hold time (repeated) START condition                | 4.0            | —                 | 0.6                                 | —                | μs   |
| IC3  | Set-up time for STOP condition                      | 4.0            | —                 | 0.6                                 | —                | μs   |
| IC4  | Data hold time                                      | 0 <sup>1</sup> | 3.45 <sup>2</sup> | 0 <sup>1</sup>                      | 0.9 <sup>2</sup> | μs   |
| IC5  | HIGH Period of I2Cx_SCL Clock                       | 4.0            | —                 | 0.6                                 | —                | μs   |
| IC6  | LOW Period of the I2Cx_SCL Clock                    | 4.7            | —                 | 1.3                                 | —                | μs   |
| IC7  | Set-up time for a repeated START condition          | 4.7            | —                 | 0.6                                 | —                | μs   |
| IC8  | Data set-up time                                    | 250            | —                 | 100 <sup>3</sup>                    | —                | ns   |
| IC9  | Bus free time between a STOP and START condition    | 4.7            | —                 | 1.3                                 | —                | μs   |
| IC10 | Rise time of both I2Cx_SDA and I2Cx_SCL signals     | —              | 1000              | 20 + 0.1C <sub>b</sub> <sup>4</sup> | 300              | ns   |
| IC11 | Fall time of both I2Cx_SDA and I2Cx_SCL signals     | —              | 300               | 20 + 0.1C <sub>b</sub> <sup>4</sup> | 300              | ns   |
| IC12 | Capacitive load for each bus line (C <sub>b</sub> ) | —              | 400               | —                                   | 400              | pF   |

<sup>1</sup> A device must internally provide a hold time of at least 300 ns for I2Cx\_SDA signal to bridge the undefined region of the falling edge of I2Cx\_SCL.

<sup>2</sup> The maximum hold time has only to be met if the device does not stretch the LOW period (ID no IC5) of the I2Cx\_SCL signal.

<sup>3</sup> A Fast-mode I<sup>2</sup>C-bus device can be used in a Standard-mode I<sup>2</sup>C-bus system, but the requirement of Set-up time (ID No IC7) of 250 ns must be met. This automatically is the case if the device does not stretch the LOW period of the I2Cx\_SCL signal. If such a device does stretch the LOW period of the I2Cx\_SCL signal, it must output the next data bit to the I2Cx\_SDA line  $\text{max\_rise\_time (IC9)} + \text{data\_setup\_time (IC7)} = 1000 + 250 = 1250$  ns (according to the Standard-mode I<sup>2</sup>C-bus specification) before the I2Cx\_SCL line is released.

<sup>4</sup> C<sub>b</sub> = total capacitance of one bus line in pF.

### 4.11.7 Pulse Width Modulator (PWM) Timing Parameters

This section describes the electrical information of the PWM. The PWM can be programmed to select one of three clock signals as its source frequency. The selected clock signal is passed through a prescaler before being input to the counter. The output is available at the pulse-width modulator output (PWMO) external pin.

Figure 53 depicts the timing of the PWM, and Table 64 lists the PWM timing parameters.

Figure 53. PWM Timing

Table 64. PWM Output Timing Parameters

| ID | Parameter                   | Min | Max     | Unit |
|----|-----------------------------|-----|---------|------|
|    | PWM Module Clock Frequency  | 0   | ipg_clk | MHz  |
| P1 | PWM output pulse width high | 15  | —       | ns   |
| P2 | PWM output pulse width low  | 15  | —       | ns   |

### 4.11.8 LCD Controller (LCDIF) Timing Parameters

Figure 54 shows the LCDIF timing and Table 65 lists the timing parameters.

Figure 54. LCD Timing

Table 65. LCD Timing Parameters

| ID | Parameter   | Symbol         | Min | Max | Unit |
|----|---|----------------|-----|-----|------|
| L1 | LCD pixel clock frequency   | tCLK(LCD)      | —   | 150 | MHz  |
| L2 | LCD pixel clock high (falling edge capture)                         | tCLKH(LCD)     | 3   | —   | ns   |
| L3 | LCD pixel clock low (rising edge capture)                           | tCLKL(LCD)     | 3   | —   | ns   |
| L4 | LCD pixel clock high to data valid (falling edge capture)           | td(CLKH-DV)    | -1  | 1   | ns   |
| L5 | LCD pixel clock low to data valid (rising edge capture)             | td(CLKL-DV)    | -1  | 1   | ns   |
| L6 | LCD pixel clock high to control signal valid (falling edge capture) | td(CLKH-CTRLV) | -1  | 1   | ns   |
| L7 | LCD pixel clock low to control signal valid (rising edge capture)   | td(CLKL-CTRLV) | -1  | 1   | ns   |

### 4.11.9 QUAD SPI (QSPI) Timing Parameters

Measurement conditions are with 35 pF load on SCK and SIO pins and input slew rate of 1 V/ns.

#### 4.11.9.1 SDR Mode

Figure 55. QuadSPI Input/Read Timing (SDR mode with internal sampling)

Table 66. QuadSPI Input Timing (SDR mode with internal sampling)

| Symbol   | Parameter                               | Value |     | Unit |
|----------|---|-------|-----|------|
|          |   | Min   | Max |      |
| $T_{IS}$ | Setup time for incoming data            | 8.67  | —   | ns   |
| $T_{IH}$ | Hold time requirement for incoming data | 0     | —   | ns   |

Figure 56. QuadSPI Input/Read Timing (SDR mode with loopback DQS sampling)

**Table 67. QuadSPI Input/Read Timing (SDR mode with loopback DQS sampling)**

| Symbol   | Parameter                               | Value |     | Unit |
|----------|---|-------|-----|------|
|          |   | Min   | Max |      |
| $T_{IS}$ | Setup time for incoming data            | 2     | —   | ns   |
| $T_{IH}$ | Hold time requirement for incoming data | 1     | —   | ns   |

**NOTE**

- For internal sampling, the timing values assumes using sample point 0, that is QuadSPIx\_SMPR[SDRSMP] = 0.
- For loopback DQS sampling, the data strobe is output to the DQS pad together with the serial clock. The data strobe is looped back from DQS pad and used to sample input data.

**Figure 57. QuadSPI Output/Write Timing (SDR mode)**

**Table 68. QuadSPI Output/Write Timing (SDR mode)**

| Symbol    | Parameter                     | Value |     | Unit         |
|-----------|-------------------------------|-------|-----|--------------|
|           |                               | Min   | Max |              |
| $T_{DVO}$ | Output data valid time        | —     | 2   | ns           |
| $T_{DHO}$ | Output data hold time         | 0     | —   | ns           |
| $T_{CK}$  | SCK clock period              | 10    | —   | ns           |
| $T_{CSS}$ | Chip select output setup time | 3     | —   | SCK cycle(s) |
| $T_{CSH}$ | Chip select output hold time  | 3     | —   | SCK cycle(s) |

**NOTE**

$T_{css}$  and  $T_{csh}$  are configured by the QuadSPIx\_FLSHCR register, the default value of 3 are shown on the timing. Please refer to the *i.MX 6UltraLite Reference Manual (IMX6ULRM)* for more details.

### 4.11.9.2 DDR Mode

Figure 58. QuadSPI Input/Read Timing (DDR mode with internal sampling)

Table 69. QuadSPI Input/Read Timing (DDR mode with internal sampling)

| Symbol          | Parameter                               | Value |     | Unit |
|-----------------|---|-------|-----|------|
|                 |   | Min   | Max |      |
| T <sub>IS</sub> | Setup time for incoming data            | 8.67  | —   | ns   |
| T <sub>IH</sub> | Hold time requirement for incoming data | 0     | —   | ns   |

Figure 59. QuadSPI Input/Read Timing (DDR mode with loopback DQS sampling)

Table 70. QuadSPI Input/Read Timing (DDR mode with loopback DQS sampling)

| Symbol          | Parameter                               | Value |     | Unit |
|-----------------|---|-------|-----|------|
|                 |   | Min   | Max |      |
| T <sub>IS</sub> | Setup time for incoming data            | 2     | —   | ns   |
| T <sub>IH</sub> | Hold time requirement for incoming data | 1     | —   | ns   |

**NOTE**

- For internal sampling, the timing values assumes using sample point 0, that is QuadSPIx\_SMPR[SDRSMP] = 0.

## Electrical Characteristics

- For loopback DQS sampling, the data strobe is output to the DQS pad together with the serial clock. The data strobe is looped back from DQS pad and used to sample input data.

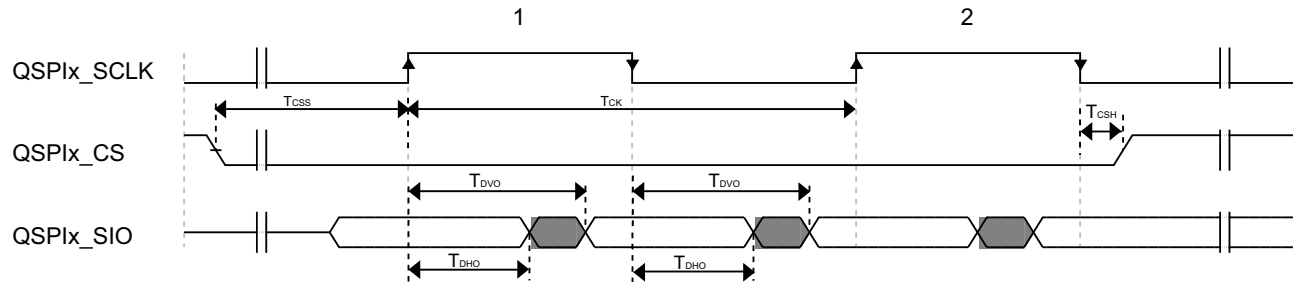

Figure 60. QuadSPI Output/Write Timing (DDR mode)

Table 71. QuadSPI Output/Write Timing (DDR mode)

| Symbol    | Parameter                     | Value                  |                                       | Unit         |
|-----------|-------------------------------|------------------------|---------------------------------------|--------------|
|           |                               | Min                    | Max                                   |              |
| $T_{DVO}$ | Output data valid time        | —                      | $0.25 \times T_{SCLK} + 2 \text{ ns}$ | ns           |
| $T_{DHO}$ | Output data hold time         | $0.25 \times T_{SCLK}$ | —                                     | ns           |
| $T_{CK}$  | SCK clock period              | 20                     | —                                     | ns           |
| $T_{CSS}$ | Chip select output setup time | 3                      | —                                     | SCK cycle(s) |
| $T_{CSH}$ | Chip select output hold time  | 3                      | —                                     | SCK cycle(s) |

### NOTE

$T_{css}$  and  $T_{csh}$  are configured by the QuadSPIx\_FLSHCR register, the default value of 3 are shown on the timing. Please refer to the *i.MX 6UltraLite Reference Manual (IMX6ULRM)* for more details.

## 4.11.10 SAI/I2S Switching Specifications

This section provides the AC timings for the SAI in master (clocks driven) and slave (clocks input) modes. All timings are given for non-inverted serial clock polarity (SAI\_TCR[TSCKP] = 0, SAI\_RCR[RSCKP] = 0) and non-inverted frame sync (SAI\_TCR[TFSI] = 0, SAI\_RCR[RFSI] = 0). If the polarity of the clock and/or the frame sync have been inverted, all the timings remain valid by inverting the clock signal (SAI\_BCLK) and/or the frame sync (SAI\_FS) shown in the figures below.

Table 72. Master Mode SAI Timing

| Num | Characteristic                | Min                | Max | Unit        |
|-----|-------------------------------|--------------------|-----|-------------|
| S1  | SAI_MCLK cycle time           | $2 \times t_{sys}$ | —   | ns          |
| S2  | SAI_MCLK pulse width high/low | 40%                | 60% | MCLK period |
| S3  | SAI_BCLK cycle time           | $4 \times t_{sys}$ | —   | ns          |
| S4  | SAI_BCLK pulse width high/low | 40%                | 60% | BCLK period |

**Table 72. Master Mode SAI Timing (continued)**

| Num | Characteristic                             | Min | Max | Unit |
|-----|--|-----|-----|------|
| S5  | SAI_BCLK to SAI_FS output valid            | —   | 15  | ns   |
| S6  | SAI_BCLK to SAI_FS output invalid          | 0   | —   | ns   |
| S7  | SAI_BCLK to SAI_TXD valid                  | —   | 15  | ns   |
| S8  | SAI_BCLK to SAI_TXD invalid                | 0   | —   | ns   |
| S9  | SAI_RXD/SAI_FS input setup before SAI_BCLK | 15  | —   | ns   |
| S10 | SAI_RXD/SAI_FS input hold after SAI_BCLK   | 0   | —   | ns   |

**Figure 61. SAI Timing — Master Modes**

**Table 73. Master Mode SAI Timing**

| Num | Characteristic                            | Min                | Max | Unit        |
|-----|---|--------------------|-----|-------------|
| S11 | SAI_BCLK cycle time (input)               | $4 \times t_{sys}$ | —   | ns          |
| S12 | SAI_BCLK pulse width high/low (input)     | 40%                | 60% | BCLK period |
| S13 | SAI_FS input setup before SAI_BCLK        | 10                 | —   | ns          |
| S14 | SAI_FA input hold after SAI_BCLK          | 2                  | —   | ns          |
| S15 | SAI_BCLK to SAI_TXD/SAI_FS output valid   | —                  | 20  | ns          |
| S16 | SAI_BCLK to SAI_TXD/SAI_FS output invalid | 0                  | —   | ns          |
| S17 | SAI_RXD setup before SAI_BCLK             | 10                 | —   | ns          |
| S18 | SAI_RXD hold after SAI_BCLK               | 2                  | —   | ns          |

## Electrical Characteristics

| SJ13 | JTAG_TRST_B set-up time to JTAG_TCK low | 40              | —   | ns   |

<sup>1</sup> T<sub>DC</sub> = target frequency of SJC

<sup>2</sup> V<sub>M</sub> = mid-point voltage

#### 4.11.12 SPDIF Timing Parameters

The Sony/Philips Digital Interconnect Format (SPDIF) data is sent using the bi-phase marking code. When encoding, the SPDIF data signal is modulated by a clock that is twice the bit rate of the data signal.

Table 75 and Figure 67 and Figure 68 show SPDIF timing parameters for the Sony/Philips Digital Interconnect Format (SPDIF), including the timing of the modulating Rx clock (SPDIF\_SR\_CLK) for SPDIF in Rx mode and the timing of the modulating Tx clock (SPDIF\_ST\_CLK) for SPDIF in Tx mode.

Table 75. SPDIF Timing Parameters

| Characteristics                                    | Symbol  | Timing Parameter Range |      | Unit |
|--|---------|------------------------|------|------|
|  |         | Min                    | Max  |      |
| SPDIF_IN Skew: asynchronous inputs, no specs apply | —       | —                      | 0.7  | ns   |
| SPDIF_OUT output (Load = 50pf)                     |         |                        |      |      |
| • Skew   | —       | —                      | 1.5  | ns   |
| • Transition rising                                | —       | —                      | 24.2 |      |
| • Transition falling                               | —       | —                      | 31.3 |      |
| SPDIF_OUT1 output (Load = 30pf)                    |         |                        |      |      |
| • Skew   | —       | —                      | 1.5  | ns   |
| • Transition rising                                | —       | —                      | 13.6 |      |
| • Transition falling                               | —       | —                      | 18.0 |      |
| Modulating Rx clock (SPDIF_SR_CLK) period          | srckp   | 40.0                   | —    | ns   |
| SPDIF_SR_CLK high period                           | srckph  | 16.0                   | —    | ns   |
| SPDIF_SR_CLK low period                            | srckpl  | 16.0                   | —    | ns   |
| Modulating Tx clock (SPDIF_ST_CLK) period          | stclkp  | 40.0                   | —    | ns   |
| SPDIF_ST_CLK high period                           | stclkph | 16.0                   | —    | ns   |
| SPDIF_ST_CLK low period                            | stclkpl | 16.0                   | —    | ns   |

Figure 68. SPDIF\_ST\_CLK Timing Diagram

### 4.11.13 UART I/O Configuration and Timing Parameters

#### 4.11.13.1 UART RS-232 Serial Mode Timing

The following sections describe the electrical information of the UART module in the RS-232 mode.

##### 4.11.13.1.1 UART Transmitter

Figure 69 depicts the transmit timing of UART in the RS-232 serial mode, with 8 data bit/1 stop bit format. Table 76 lists the UART RS-232 serial mode transmits timing characteristics.

Figure 69. UART RS-232 Serial Mode Transmit Timing Diagram

Table 76. RS-232 Serial Mode Transmit Timing Parameters

| ID  | Parameter         | Symbol     | Min                                   | Max                               | Unit |
|-----|-------------------|------------|---------------------------------------|-----------------------------------|------|
| UA1 | Transmit Bit Time | $t_{Tbit}$ | $1/F_{baud\_rate}^1 - T_{ref\_clk}^2$ | $1/F_{baud\_rate} + T_{ref\_clk}$ | —    |

<sup>1</sup>  $F_{baud\_rate}$ : Baud rate frequency. The maximum baud rate the UART can support is  $(ipg\_perclk \text{ frequency})/16$ .

<sup>2</sup>  $T_{ref\_clk}$ : The period of UART reference clock  $ref\_clk$  ( $ipg\_perclk$  after RFDIV divider).

### 4.11.13.1.2 UART Receiver

Figure 70 depicts the RS-232 serial mode receives timing with 8 data bit/1 stop bit format. Table 77 lists serial mode receive timing characteristics.

Figure 70. UART RS-232 Serial Mode Receive Timing Diagram

Table 77. RS-232 Serial Mode Receive Timing Parameters

| ID  | Parameter                     | Symbol     | Min   | Max   | Unit |
|-----|-------------------------------|------------|---|---|------|
| UA2 | Receive Bit Time <sup>1</sup> | $t_{Rbit}$ | $1/F_{baud\_rate}^2 - 1/(16 \times F_{baud\_rate})$ | $1/F_{baud\_rate} + 1/(16 \times F_{baud\_rate})$ | —    |

<sup>1</sup> The UART receiver can tolerate  $1/(16 \times F_{baud\_rate})$  tolerance in each bit. But accumulation tolerance in one frame must not exceed  $3/(16 \times F_{baud\_rate})$ .

<sup>2</sup>  $F_{baud\_rate}$ : Baud rate frequency. The maximum baud rate the UART can support is  $(ipg\_perclk \text{ frequency})/16$ .

### 4.11.13.1.3 UART IrDA Mode Timing

The following subsections give the UART transmit and receive timings in IrDA mode.

#### UART IrDA Mode Transmitter

Figure 71 depicts the UART IrDA mode transmit timing, with 8 data bit/1 stop bit format. Table 78 lists the transmit timing characteristics.

Figure 71. UART IrDA Mode Transmit Timing Diagram

Table 78. IrDA Mode Transmit Timing Parameters

| ID  | Parameter                      | Symbol         | Min   | Max   | Unit |
|-----|--------------------------------|----------------|---|---|------|
| UA3 | Transmit Bit Time in IrDA mode | $t_{TIRbit}$   | $1/F_{baud\_rate}^1 - T_{ref\_clk}^2$             | $1/F_{baud\_rate} + T_{ref\_clk}$                 | —    |
| UA4 | Transmit IR Pulse Duration     | $t_{TIRpulse}$ | $(3/16) \times (1/F_{baud\_rate}) - T_{ref\_clk}$ | $(3/16) \times (1/F_{baud\_rate}) + T_{ref\_clk}$ | —    |

<sup>1</sup>  $F_{baud\_rate}$ : Baud rate frequency. The maximum baud rate the UART can support is  $(ipg\_perclk \text{ frequency})/16$ .

## Electrical Characteristics

<sup>2</sup>  $T_{ref\_clk}$ : The period of UART reference clock *ref\_clk* (*ipg\_perclk* after RFDIV divider).

### UART IrDA Mode Receiver

Figure 72 depicts the UART IrDA mode receive timing, with 8 data bit/1 stop bit format. Table 79 lists the receive timing characteristics.

Figure 72. UART IrDA Mode Receive Timing Diagram

Table 79. IrDA Mode Receive Timing Parameters

| ID  | Parameter                                  | Symbol         | Min   | Max   | Unit |
|-----|--|----------------|---|---|------|
| UA5 | Receive Bit Time <sup>1</sup> in IrDA mode | $t_{RIRbit}$   | $1/F_{baud\_rate}^2 - 1/(16 \times F_{baud\_rate})$ | $1/F_{baud\_rate} + 1/(16 \times F_{baud\_rate})$ | —    |
| UA6 | Receive IR Pulse Duration                  | $t_{RIRpulse}$ | 1.41 $\mu$ s  | $(5/16) \times (1/F_{baud\_rate})$                | —    |

<sup>1</sup> The UART receiver can tolerate  $1/(16 \times F_{baud\_rate})$  tolerance in each bit. But accumulation tolerance in one frame must not exceed  $3/(16 \times F_{baud\_rate})$ .

<sup>2</sup>  $F_{baud\_rate}$ : Baud rate frequency. The maximum baud rate the UART can support is (*ipg\_perclk* frequency)/16.

### 4.11.14 USB PHY Parameters

This section describes the USB-OTG PHY parameters.

The USB PHY meets the electrical compliance requirements defined in the Universal Serial Bus Revision 2.0 OTG with the following amendments.

- USB ENGINEERING CHANGE NOTICE
  - Title: 5V Short Circuit Withstand Requirement Change
  - Applies to: Universal Serial Bus Specification, Revision 2.0
- Errata for USB Revision 2.0 April 27, 2000 as of 12/7/2000
- USB ENGINEERING CHANGE NOTICE
  - Title: Pull-up/Pull-down resistors
  - Applies to: Universal Serial Bus Specification, Revision 2.0
- USB ENGINEERING CHANGE NOTICE
  - Title: Suspend Current Limit Changes
  - Applies to: Universal Serial Bus Specification, Revision 2.0
- USB ENGINEERING CHANGE NOTICE
  - Title: USB 2.0 Phase Locked SOFs

- Applies to: Universal Serial Bus Specification, Revision 2.0
- On-The-Go and Embedded Host Supplement to the USB Revision 2.0 Specification
  - Revision 2.0 plus errata and ecn June 4, 2010
- Battery Charging Specification (available from USB-IF)
  - Revision 1.2, December 7, 2010
  - Portable device only

## 4.12 A/D Converter

### 4.12.1 12-bit ADC electrical characteristics

#### 4.12.1.1 12-bit ADC operating conditions

Table 80. 12-bit ADC Operating Conditions

| Characteristic  | Conditions  | Symb              | Min               | Typ <sup>1</sup>  | Max               | Unit  | Comment                   |
|---|---|-------------------|-------------------|-------------------|-------------------|-------|---------------------------|
| Supply voltage  | Absolute  | V <sub>DDAD</sub> | 3.0               | -                 | 3.6               | V     | —                         |

| [L:] Signal to Noise plus Distortion | See ENOB                | SINAD           | SINAD = 6.02 x ENOB + 1.76 |                  |     | dB   | —           |

<sup>1</sup> All accuracy numbers assume the ADC is calibrated with  $V_{REFH}=V_{DDAD}$

<sup>2</sup> Typical values assume  $V_{DDAD} = 3.0\text{ V}$ ,  $\text{Temp} = 25^\circ\text{C}$ ,  $F_{\text{adck}} = 20\text{ MHz}$  unless otherwise stated. Typical values are for reference only and are not tested in production.

**NOTE**

The ADC electrical spec would be met with the calibration enabled configuration.

## 5 Boot Mode Configuration

This section provides information on boot mode configuration pins allocation and boot devices interfaces allocation.

### 5.1 Boot Mode Configuration Pins

Table 82 provides boot options, functionality, fuse values, and associated pins. Several input pins are also sampled at reset and can be used to override fuse values, depending on the value of BT\_FUSE\_SEL fuse. The boot option pins are in effect when BT\_FUSE\_SEL fuse is '0' (cleared, which is the case for an unblown fuse). For detailed boot mode options configured by the boot mode pins, see the i.MX 6UltraLite Fuse Map document and the System Boot chapter in *i.MX 6UltraLite Reference Manual (IMX6ULRM)*.

**Table 82. Fuses and Associated Pins Used for Boot**

| Pin        | Direction at reset         | eFuse name | Details             |
|------------|----------------------------|------------|---------------------|
| BOOT_MODE0 | Input with 100 K pull-down | N/A        | Boot mode selection |
| BOOT_MODE1 | Input with 100 K pull-down | N/A        | Boot mode selection |

**Table 82. Fuses and Associated Pins Used for Boot (continued)**

| Pin        | Direction at reset         | eFuse name | Details  |
|------------|----------------------------|------------|--|
| LCD_DATA00 | Input with 100 K pull-down | BT_CFG1[0] | Boot Options, Pin value overrides fuse settings for BT_FUSE_SEL = '0'. Signal Configuration as Fuse Override Input at Power Up. These are special I/O lines that control the boot up configuration during product development. In production, the boot configuration can be controlled by fuses. |
| LCD_DATA01 | Input with 100 K pull-down | BT_CFG1[1] |  |

## 5.2 Boot Device Interface Allocation

The following tables list the interfaces that can be used by the boot process in accordance with the specific boot mode configuration. The tables also describe the interface's specific modes and IOMUXC allocation, which are configured during boot when appropriate.

**Table 83. QSPI Boot trough QSPI**

| Ball Name | Signal Name  | Mux Mode | Common | Quad Mode | + Port A DQS | + Port A CS1 | + Port B | + Port B DQS | + Port B CS1 |
|-----------|--------------|----------|--------|-----------|--------------|--------------|----------|--------------|--------------|
| NAND_WP_B | qspi.A_SCLK  | Alt2     | Yes    | Yes       |              |              |          |              |              |
| NAND_DQS  | qspi.A_SS0_B | Alt2     | Yes    | Yes       |              |              |          |              |              |

**Table 83. QSPI Boot trough QSPI (continued)**

|              |                |      |     |     |     |     |     |     |     |
|--------------|----------------|------|-----|-----|-----|-----|-----|-----|-----|
| NAND_READY_B | qspi.A_DATA[0] | Alt2 | Yes | Yes |     |     |     |     |     |
| NAND_CE0_B   | qspi.A_DATA[1] | Alt2 | Yes | Yes |     |     |     |     |     |
| NAND_CE1_B   | qspi.A_DATA[2] | Alt2 | Yes | Yes |     |     |     |     |     |
| NAND_CLE     | qspi.A_DATA[3] | Alt2 | Yes | Yes |     |     |     |     |     |
| NAND_DATA05  | qspi.B_DATA[3] | Alt2 |     |     |     |     | Yes |     |     |

<sup>1</sup> SNVS\_TAMPER0 to SNVS\_TAMPER9 can be configured as GPIO or tamper detection pin, it is depending on the fuse setting TAMPER\_PIN\_DISABLE[1:0]. When the pad is configured as GPIO, the value is keeper out of reset.

<sup>2</sup> SNVS\_TAMPER0 to SNVS\_TAMPER9 is input floating in the following conditions.

—SNVS low power mode when configured as GPIO

—Tamper functions are not used when configured as TAMPER detection pins

It is required to connect external 1M Ohm pull-up or pull-down resistors to the pad to avoid the undesired leakage under two conditions above.

### 6.2.3 9x9 mm, 0.5 mm Pitch, Ball Map

Table 99 shows the 9x9 mm, 0.5 mm pitch ball map for the i.MX 6UltraLite.

Information in this document is provided solely to enable system and software implementers to use Freescale products. There are no express or implied copyright licenses granted hereunder to design or fabricate any integrated circuits based on the information in this document.

Freescale reserves the right to make changes without further notice to any products herein. Freescale makes no warranty, representation, or guarantee regarding the suitability of its products for any particular purpose, nor does Freescale assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters that may be provided in Freescale data sheets and/or specifications can and do vary in different applications, and actual performance may vary over time. All operating parameters, including "typicals," must be validated for each customer application by customer's technical experts. Freescale does not convey any license under its patent rights nor the rights of others. Freescale sells products pursuant to standard terms and conditions of sale, which can be found at the following address: [freescale.com/SalesTermsandConditions](http://freescale.com/SalesTermsandConditions).

Freescale, the Freescale logo, and the Energy Efficient Solutions logo are trademarks of Freescale Semiconductor, Inc., Reg. U.S. Pat. & Tm. Off. ARM, the ARM powered logo, and Cortex are registered trademarks of ARM Limited ( or its subsidiaries) in the EU and/or elsewhere. All other product or service names are the property of their respective owners.

The USB-IF logo is a registered trademark of USB Implementers Forum, Inc.

RoHS-compliant and/or Pb-free versions of Freescale products have the functionality and electrical characteristics of their non-RoHS-compliant and/or non-Pb-free counterparts.
