Wave Soldering Profile For Thru-Hole Products (Pb-Free Components)

- Notes:
- 1.Recommend pre-heat temperature of 105°C or less (as measured with a thermocouple attached to the LED pins) prior to immersion in the solder wave with a maximum solder bath temperature of 260°C
 - 2.Peak wave soldering temperature between $245^\circ\text{C} \sim 255^\circ\text{C}$ for 3 sec (5 sec max).
 - 3.Do not apply stress to the epoxy resin while the temperature is above 85°C .
 - 4.Fixtures should not incur stress on the component when mounting and during soldering process.
 - 5.SAC 305 solder alloy is recommended.
 - 6.No more than one wave soldering pass.

Remarks:

If special sorting is required (e.g. binning based on forward voltage, luminous intensity / luminous flux, or wavelength), the typical accuracy of the sorting process is as follows:

1. Wavelength: $\pm 1\text{nm}$
 2. Luminous Intensity / Luminous Flux: $\pm 15\%$
 3. Forward Voltage: $\pm 0.1\text{V}$
- Note: Accuracy may depend on the sorting parameters.
