

# Part Number: XSMO983W

SUPER FLUX LED LAMP

### **Features**

- High current operation for greater luminous output
- Low power consumption and thermal resistance

www.SunLEDusa.com

- Can be used with automatic insertion equipment
- RoHS Compliant

### **Benefits:**

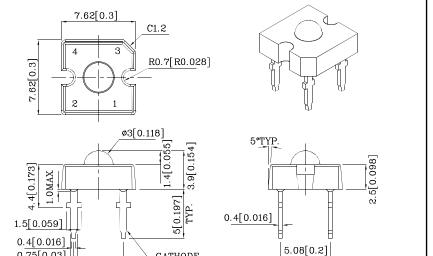

- •Rugged design allows for easy maintenance
- •Robust package for optimum reliability

# **Typical Applications:**

- •Automotive side markers
- •Gaming and entertainment lighting
- •Signs and road hazard indicators

<sup>1.</sup>Luminous intensity is measured with an integrating sphere after the device has stabilized.

May 11,2012 XDSA8077 V7-X Layout: Maggie L.

<sup>2.01/2</sup> is the angle from optical centerline where the luminous intensity is 1/2 of the optical peak value.

<sup>3.</sup>LEDs are binned according to their Luminous intensity.

<sup>\*</sup> Luminous intensity / luminous flux value and wavelength are in accordance with CIE127-2007 standards.

Wave Soldering Profile For Thru-Hole Products (Pb-Free Components)

- 1. Recommend pre-heat temperature of 105°C or less (as measured with a thermocouple attached to the LED pins) prior to immersion in the solder wave with a maximum solder bath temperature of 260°C 2. Peak wave soldering temperature between 245°C ~ 255°C for 3 sec (5 sec max)
- (5 sec max).
- 3.Do not apply stress to the epoxy resin while the temperature is above 85°C. 4.Fixtures should not incur stress on the component when mounting and during soldering process.
  5.SAC 305 solder alloy is recommended.
  6.No more than one wave soldering pass.

# Remarks:

If special sorting is required (e.g. binning based on forward voltage, luminous intensity / luminous flux, or wavelength),

the typical accuracy of the sorting process is as follows:

- 1. Wavelength: +/-1nm
- 2. Luminous Intensity / Luminous Flux: +/-15%
- 3. Forward Voltage: +/-0.1V

Note: Accuracy may depend on the sorting parameters.
