

LM556 Dual Timer

1 Features

- Direct Replacement for SE556/NE556
- Timing From Microseconds Through Hours
- Operates in Both Astable and Monostable Modes
- Replaces Two 555 Timers
- Adjustable Duty Cycle
- Output Can Source or Sink 200 mA
- Output and Supply TTL-Compatible
- Temperature Stability Better Than 0.005% per °C
- Normally On and Normally Off Output

2 Applications

- Precision Timing
- Pulse Generation
- Sequential Timing
- Time Delay Generation
- Pulse Width Modulation
- Pulse Position Modulation
- Linear Ramp Generator

3 Description

The LM556 dual-timing circuit is a highly-stable controller capable of producing accurate time delays or oscillation. The LM556 device is a dual-timing version of the LM555 device. Timing is provided by an external resistor and capacitor for each timing function. The two timers operate independently of each other, sharing only V_{CC} and ground. The circuits may be triggered and reset on falling waveforms. The output structures may sink or source 200 mA.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
LM556	SOIC (14)	3.91 mm x 8.65 mm
	PDIP (14)	6.35 mm x 19.177 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
CONTROL VOLTAGE (Timer 0)	3	I	Controls the threshold and trigger levels. It determines the pulse width of the output waveform. An external voltage applied to this pin can also be used to modulate the output waveform.
CONTROL VOLTAGE (Timer 1)	11	I	Controls the threshold and trigger levels. It determines the pulse width of the output waveform. An external voltage applied to this pin can also be used to modulate the output waveform.
DISCHARGE (Timer 0)	1	I	Open collector output which discharges a capacitor between intervals (in phase with output). It toggles the output from high to low when voltage reaches 2/3 of supply voltage.
DISCHARGE (Timer 1)	13	I	Open collector output which discharges a capacitor between intervals (in phase with output). It toggles the output from high to low when voltage reaches 2/3 of supply voltage.
GND	7	O	Ground reference voltage
OUTPUT (Timer 0)	5	O	Output driven waveform
OUTPUT (Timer 1)	9	O	Output driven waveform
RESET (Timer 0)	4	I	Negative pulse applied to this pin to disable or reset the timer. When not used for reset purposes, it should be connected to V _{CC} to avoid false triggering.
RESET (Timer 1)	10	I	Negative pulse applied to this pin to disable or reset the timer. When not used for reset purposes, it should be connected to V _{CC} to avoid false triggering.
THRESHOLD (Timer 0)	2	I	Compares the voltage applied to the terminal with a reference voltage of 2/3 V _{CC} . The amplitude of voltage applied to this terminal is responsible for the set state of the flip-flop.
TRIGGER (Timer 0)	6	I	Responsible for transition of the flip-flop from set to reset. The output of the timer depends on the amplitude of the external trigger pulse applied to this pin.
THRESHOLD (Timer 1)	12	I	Compares the voltage applied to the terminal with a reference voltage of 2/3 V _{CC} . The amplitude of voltage applied to this terminal is responsible for the set state of the flip-flop.
TRIGGER (Timer 1)	8	I	Responsible for transition of the flip-flop from set to reset. The output of the timer depends on the amplitude of the external trigger pulse applied to this pin.
VCC	14	I	Supply voltage with respect to GND

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾⁽²⁾

		MIN	MAX	UNIT
Supply voltage			18	V
Power dissipation ⁽³⁾	LM556CM		410	mW
	LM556CN		1620	
Operating temperature, LM556C		0	70	°C
Soldering information	PDIP package soldering (10 seconds)		260	°C
	SOIC package vapor phase (60 seconds)		215	
	SOIC package infrared (15 seconds)		220	
Storage temperature, T _{stg}		-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/ Distributors for availability and specifications.
- (3) For operating at elevated temperatures the device must be derated based on a 150°C maximum junction temperature and a thermal resistance of 77°C/W (Plastic Dip), and 110°C/W (SO-14 Narrow).

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±500	V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V _{CC}	Supply voltage	4.5	16	V
T _A	Operating temperature	0	70	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾	LM556		UNIT	
	D (SOIC)	NFF (PDIP)		
	14 PINS	14 PINS		
R _{θJA}	Junction-to-ambient thermal resistance	85.3	48.0	°C/W

	$V_{CC} = 5\text{ V}$		1.25	1.67	2	
Trigger current				0.2	1	μA
Reset voltage			0.4	0.5	1	V
Reset current				0.1	0.6	mA
Threshold current	$V_{TH} = V\text{-control}$ ⁽³⁾			0.03	0.1	μA
	$V_{TH} = 11.2\text{ V}$				250	nA
Control voltage level and threshold voltage		$V_{CC} = 15\text{ V}$	9	10	11	V
		$V_{CC} = 5\text{ V}$	2.6	3.33	4	
Pin 1, 13 leakage output high				1	100	nA
Pin 1, 13 sat output low ⁽⁴⁾		$V_{CC} = 15\text{ V}$, $I = 15\text{ mA}$		180	300	mV
		$V_{CC} = 4.5\text{ V}$, $I = 4.5\text{ mA}$		80	200	
Output voltage drop (low)	$V_{CC} = 15\text{ V}$	$I_{SINK} = 10\text{ mA}$		0.1	0.25	V
		$I_{SINK} = 50\text{ mA}$		0.4	0.75	
		$I_{SINK} = 100\text{ mA}$		2	2.75	
		$I_{SINK} = 200\text{ mA}$		2.5		
	$V_{CC} = 5\text{ V}$, $I_{SINK} = 5\text{ mA}$			0.25	0.35	
Output voltage drop (high)	$I_{SOURCE} = 200\text{ mA}$, $V_{CC} = 15\text{ V}$			12.5		V
	$I_{SOURCE} = 100\text{ mA}$, $V_{CC} = 15\text{ V}$		12.75	13.3		
	$V_{CC} = 5\text{ V}$		2.75	3.3		
Rise time of output				100		ns
Fall time of output				100		ns
Matching characteristics	Initial timing accuracy	See ⁽⁵⁾		0.1%	2%	ppm/ $^\circ\text{C}$
	Timing drift with temperature			± 10		
	Drift with supply voltage			0.2	0.5	%/V

(1) Supply current when output high typically 1 mA less at $V_{CC} = 5\text{ V}$.

(2) Tested at $V_{CC} = 5\text{ V}$ and $V_{CC} = 15\text{ V}$.

(3) This will determine the maximum value of $R_A + R_B$ for 15-V operation. The maximum total ($R_A + R_B$) is 20 M Ω .

(4) No protection against excessive pin 1, 13 current is necessary providing the package dissipation rating will not be exceeded.

(5) Matching characteristics refer to the difference between performance characteristics of each timer section.

7 Detailed Description

7.1 Overview

The LM556 dual-timing circuit is a highly stable device for generating accurate time delays or oscillations. The two timers operate independently from one another, only sharing V_{CC} and ground. For each individual timer, additional terminals are provided for triggering or resetting. In the monostable mode of operation, the time is precisely controlled by one external resistor and capacitor. For astable mode operation as an oscillator, the free running frequency and duty cycle are accurately controlled with two external resistors and one capacitor. The circuit may be triggered and reset on falling waveforms and the output circuit can source or sink up to 200 mA.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Operating Characteristics

The LM556 is specified for operation from 4.5 V to 16 V. Many of the specifications apply from 0°C to 70°C. Parameters that can exhibit significant variance with regard to operating voltage or temperature are presented [Electrical Characteristics](#) section and in [Typical Characteristics](#).

7.3.2 Timing from Microseconds Through Hours

The LM556 has the ability to have timing parameters from the microseconds range to hours. The time delay of the system can be determined by the time constant of the R and C values used for either the monostable or astable configuration. A nomograph is available for easy determination of R and C values for various time delays.

7.4 Device Functional Modes

The LM556 can operate in both astable and monostable mode depending on the application requirements.

7.4.1 Monostable Mode

The LM556 timer acts as a one-shot pulse generator. The pulse begins when the LM556 timer receives a signal at the trigger input that falls below 1/3 of the voltage supply. The width of the output pulse is determined by the time constant of an RC network. The output pulse ends when the voltage on the capacitor equals 2/3 of the supply voltage. The output pulse width can be extended or shortened depending on the application by adjusting the R and C values. More details are given in the LM555 datasheet ([SNAS548](#)).

Device Functional Modes (continued)

Figure 11. Monostable

7.4.2 Astable (Free-Running) Mode

The LM556 timer can operate as an oscillator and puts out a continuous stream of rectangular pulses having a specified frequency. The frequency of the pulse stream depends on the values of RA, RB, and C. Again, more details are given in the LM555 datasheet ([SNAS548](#)).

Figure 12. Astable

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The LM556 timer can be used in various configurations. A typical application for the LM556 timer in astable mode is to drive an audio device (such as a beeper) to provide a pulsed sound. This simple application can be modified to fit any application requirement.

8.2 Typical Application

Figure 13. Typical Application

8.2.1 Design Requirements

The main design requirements for this application require setting one of the timers (Timer A in this case) to the same resonant frequency as the piezo transducer which can be set by choosing R_{1A} , R_{2A} , and C_A with [Equation 1](#):

$$f_o = \frac{1.44}{((R_{1A} + 2R_{2A})C)} \quad (1)$$

The other design choice is to decide how often and long to produce the bleeping sound. This can be set by choosing R_{1B} and R_{2B} of Timer B (acts as the reset button for Timer A) with [Equation 2](#):

$$D = \frac{R_{2B}}{R_{1B} + R_{2B}} \quad (2)$$

Other useful design equations like [Equation 3](#) and [Equation 4](#) are given below where t_h represents the time it takes to charge the capacitor of each individual timer and t_l represents the time it takes to discharge the capacitor.

Typical Application (continued)

$$t_h = 0.693(R_1 + R_2)C$$

where

- t_h represents the time it takes to charge the capacitor of each individual timer (3)

$$t_l = 0.693R_2C$$

where

- t_l represents the time it takes to discharge the capacitor. (4)

8.2.2 Detailed Design Procedure

Given that the resonant frequency of the piezo transducer is about 3 kHz, by choosing R_1 , C and using [Equation 1](#), R_2 can be determined to be 23.5 k Ω .

In order to have the sound be audible for half the period, the duty cycle for the triggering timer should be 50%. However, this is difficult to achieve because the recommended minimum value for R_1 is 1 k Ω . Therefore, a duty cycle of 49% was chosen for this application. By choosing R_1 to be 1 k Ω and using [Equation 2](#), R_2 is found to be 24.5 k Ω .

8.2.3 Application Curve

Figure 14. Capacitor Voltage and Output Waveforms in Astable Mode

9 Power Supply Recommendations

The LM556 requires a voltage supply within 4.5 V to 16 V. Adequate power supply bypassing is necessary to protect associated circuitry. The minimum recommended capacitor value is 0.1 μF in parallel with a 1- μF electrolytic capacitor. Place the bypass capacitors as close as possible to the LM556 and minimize the trace length

CAUTION

Supply voltages larger than 18 V can permanently damage the device; see the [Absolute Maximum Ratings](#) table.

10 Layout

10.1 Layout Guidelines

Standard PCB rules apply to routing the LM556. The parallel combination of a 0.1- μF capacitor and a 1- μF electrolytic capacitor should be as close as possible to the LM556. The capacitor used for the time delay should also be placed as close as possible to the discharge pin. A ground plane on the bottom layer can be used to provide better noise immunity and signal integrity.

10.2 Layout Example

Figure 15. Layout Example

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
