## DESCRIPTION

Walsin Technology Corporation develops a new ceramic Common Mode Filter specified for the EMI suppression on USB 2.0/ IEEE 1394 high speed data transmission, as shown in fig-1. The new specification, USB 2.0 released in April 2000, describes a high-speed of 480 Mbps. The major goal is to replace most of the traditional ports on a PC with one versatile and user-friendly interface. IEEE-1394 has a bus speed of 400 Mbps, and IEEE-1394b proposes to increase this rate to 3.2 Gbps. Under such a high speed, to suppress the serious EMI is a key issue for developer. The Common Mode Filter offered by Walsin Technology Corporation has been designed to a high suppression on Common Mode Noise as well as low insertion loss characteristics on Differential Mode Signal through Walsin's advanced LTCC (Low Temperature Co-fired Ceramic) technology and superior product design via 3D EM Simulation Skill.

This Common Mode Filter has a rectangular ceramic body with a tiny dimension of 1.2 x 2.0 x 1.0 mm<sup>3</sup> future meet the SMT automation and miniaturization requirements on modern devices.
