(1)Temperature characteristic (identified code)

| CODE | Temperature characteristic | Cap. Change                    |
|------|----------------------------|--------------------------------|
| SL   | SL                         | -1000~+350ppm/°C (+20°C~+85°C) |
| YP   | Y5P                        | $\pm 10\%$                     |
| YU   | Y5U                        | -55% to +20%                   |
| YV   | Y5V                        | -80% ~ +30%                    |

(2)-1 Rated voltage(identified by 1-figure code) : 0= X1:400V~/Y1:250V~, 1=X1:400V~/Y1:400V~

(2)-2 Type(identified by 2-figure code) : AH

(3)Capacitance (identified by 3-figure code):EX.221=220pF

(4)Capacitance tolerance (identified by code): J:±5%,K:±10%,M:±20%

(5)Nominal body diameter dimension (identified by 2-figure code) : 06--Dmax7.0mm, 07--Dmax8.0mm...

(6)Internal code: 0--Normal, other code--Special control

(7)Lead Style : Refer to "2. Mechanical".

(8)Packing mode and lead length (identified by 2-figure code)

| Taping Code | Description  |
|-------------|--|
| AM          | Ammo box and product pitch : 25.4 mm                   |
| AS          | Ammo box and product pitch : 15.0 mm                   |
|             | (Only for the SAP part number 11-12 digits $\leq 11$ ) |
| AT          | Ammo box and product pitch : 30.0 mm                   |
|             |  |

| Bulk Code | Description         | Z  |
|-----------|---------------------|----|
| 03        | Lead length : 3.0mm | AL |
| 3E        | Lead length : 3.5mm |    |
| 04        | Lead length : 4.0mm |    |
| 4E        | Lead length : 4.5mm |    |
| 20        | Lead length : 20mm  |    |

(9)Length tolerance

| Code | Description               |
|------|---------------------------|
| А    | ±0.5 mm                   |
|      | (only for kink lead type) |
| В    | ±1.0 mm                   |
| C    | Min.                      |
| D    | Taping special purpose    |

(10)Pitch

| Code | Description               |
|------|---------------------------|
| 0    | 10±1 mm                   |
| А    | 10±0.5 mm                 |
| С    | $12.5 \pm 0.8 \text{ mm}$ |

(11)Epoxy Resin Code

| Code | Description                       |
|------|-----------------------------------|
| В    | Halogen and Pb free, epoxy resin. |
| Н    | Halogen and Fo free, epoxy feshi. |

#### 6. Scope:

THIS SPECIFICATION APPLIES TO CERAMIC INSULATED CAPACITORS DISK TYPE USED IN ELECTRONIC EQUIPMENT.

6.1Applicable safety standard

This specification applies to the VDE, SEV, SEMKO, FIMKO, NEMKO, DEMKO, KTL, UL, CSA approved ceramic capacitors disc type for antenna coupling, line-by-pass and across-the-line. X1, Y1 capacitor based on IEC60384-14. "UL, CSA recognized capacitor for across-the-line, line-by-pass" and antenna-isolation.

6.2 Safety standards approval and recognized no.

#### 7. Specification and test method:

7.1 Operating Temperature Range: -40 to +125°C

7.2 Test condition:

Test and measurement shall be made at the standard condition. (temperature  $15 \sim 35^{\circ}$ C, relative humidity  $45 \sim 75^{\circ}$  and atmospheric pressure  $860 \sim 1060$  hpa). Unless otherwise specified herein.

If doubt occurred on the value of measurement, and measurement was requested by customer capacitors shall be measured at the reference condition. (temperature  $20\pm2^{\circ}$ C or  $25\pm2^{\circ}$ C, relative humidity 60~70% and atmospheric pressure 860~1060hpa.)

7.3 Performance:

| No    | It                          | ems                   | Performance  | Testing method  |  |
|-------|-----------------------------|-----------------------|--|---|--|
| 7.3.1 | Appearance<br>And dimension |                       | The appearance and dimension shall be as given in section 3.   | Visual check.   |  |
| 7.3.2 | Marking                     |                       | The marking shall be easily legible. (As given section 5)  | Visual check.   |  |
|       |                             | Between<br>terminals  | No failure.  | The capacitors shall not be damage when AC4000V (rms.) are applied between the lead wires for 60sec. (Charge/Discharge current $\Box$ 50mA.)  |  |
| 7.3.3 | Dielectric<br>Strength      | Body<br>Insulation    | No failure.  | First. The terminals of the capacitor shall be closely<br>wrapped around the body of the capacitor distance of<br>about 3 to 4mm from each terminal. Then, the<br>capacitor shall be inserted into a container filled with<br>metal balls of about 1mm diameter. Finally, AC4000V<br>(rms.) is applied for 60sec between the capacitor lead<br>wires and metal balls. (Charge/Discharge current<br>50mA.) |  |
| 7.3.4 | Insulation<br>Resistance    | Between<br>terminals  | $10000 M\Omega$ or more.   | The insulation resistance shall be measured with DC500±50V within 60±5sec of charging.  |  |
| 7.3.5 | Capacitance                 |                       | Within specified tolerance.  | Y5P&Y5U&Y5V: The capacitance shall be measured at $20\pm2^{\circ}$ C with 1kHz $\pm20\%$ and 5V(rms.) or less.  |  |
| 7.3.6 |                             | ipation<br>(anδ) or Q | Y5P $\cdot$ Y5U : D.F. $\leq 2.5\%$<br>Y5V : D.F. $\leq 5.0\%$<br>SL :<br>30pF&above: $\geq 1000$<br>Below 30PF: $\geq 400+20\times C$                               | SL: The capacitance shall be measured at 25°C with 1MHz+20% and 1.0±0.2Vrms   |  |

## 9. Notices:

## 9.1 Caution (Rating):

(1). Operating Voltage

Be sure to maintain the Vp-p value of the applied voltage or the Vo-p which contains DC bias within the rated voltage range.

When the voltage is started to apply to the circuit or it is stopped applying, the irregular voltage may be generated for a transit period because of resonance or switching. Be sure to use a capacitor within rated voltage containing this irregular voltage.

| Voltage                   | DC Voltage | DC+AC Voltage | AC Voltage | Pulse Voltage (1) | Pulse Voltage (2) |
|---------------------------|------------|---------------|------------|-------------------|-------------------|
| Positional<br>Measurement | Vo-p       | V0-p          | Vp-p       | Vp-p              | Vp-p              |

(2). Operating Temperature and Self-generated Heat

Keep the surface temperature of a capacitor below the upper limit of its rated operating temperature range. Be sure to take into account the heat generated by the capacitor itself. When the capacitor is used in a high-frequency current, pulse current or the like, it may have the self-generated heat due to dielectric-loss.

Applied voltage should be the load such as self-generated heat is within 20°C on the condition of atmosphere temperature 25°C. When measuring, use a thermocouple of small thermal capacity-K of  $\varphi$ 0.1mm and be in the condition where capacitor is not affected by radiant heat of other components and wind of surroundings. Excessive heat my lead to deterioration of the capacitor's characteristics and reliability.

- (3). Test condition for withstanding Voltage
  - I. Test Equipment

Test equipment for AC withstanding voltage shall be used with the performance of the wave similar to 50/60 Hz sine waves.

If the distorted sine wave or over load exceeding the specified voltage value is applied, the defective may be caused.

Page: 17 / 20

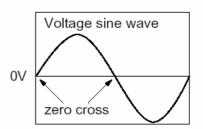

#### II. Voltage Applied Method

When the withstanding voltage is applied, capacitor's lead or terminal shall be firmly connected to the output of the withstanding voltage test equipment, and then the voltage shall be raised from near zero to the test voltage.

If the test voltage without the raise from near zero voltage would be applied directly to capacitor, test voltage should be applied with the \*zero cross. At the end of the test time, the test voltage shall be reduced to near zero, and then capacitor's lead or terminal shall be taken off the output of the withstanding voltage test equipment.

If the test voltage without the raise from near zero voltage would be applied directly to capacitor, the surge voltage may arise, and therefore, the defective may be caused.

ZERO CROSS is the point where voltage sine wave pass 0V.- See the right figure.

Ver: 21

(4). Fail-Safe

When capacitor would be broken, failure may result in a short circuit. Be sure to provide an appropriate fail-safe function like a fuse on your product if failure would follow an electric shock, fire or fume.

# Failure to follow the above cautions may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used.

### 9.2 Caution (Storage and operating condition):

Operating and storage environment Opolog

The insulating coating of capacitors does not form a perfect seal; therefore, do not use or store capacitors in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. And avoid exposure to moisture. Before cleaning, bonding, or molding this product, verify that these processes do not affect product quality by testing the performance of a cleaned, bonded or molded product in the intended equipment. Store the capacitors where the temperature and relative humidity do not exceed –10 to 40 degrees centigrade and 15 to 85 % for 6 months maximum and use within the period after receiving the capacitors.

"Failure to follow the above cautions may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used."

#### 9.3 Caution (Soldering and Mounting):

9.3.1 Vibration and impact:

Do not expose a capacitor or its leads to excessive shock or vibration during use.

POE-D10-00-E-21 Ver: 21

Page: 18 / 20

9.3.2 Soldering:

When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specification of the capacitor. Subjecting this product to excessive heating could melt the internal junction solder and may result in thermal shocks that can crack the ceramic element.

When soldering capacitor with a soldering iron, it should be performed in following

conditions.

Temperature of iron-tip: 400 degrees C. max.

Soldering iron wattage: 50W max.

Soldering time: 3.5 sec. max.

9.3.3 Cleaning (ultrasonic cleaning):

To perform ultrasonic cleaning, observe the following conditions.

Rinse bath capacity: Output of 20 watts per liter or less.

Rinsing time:5 min maximum.

Do not vibrate the PCB/PWB directly.

Excessive ultrasonic cleaning may lead to fatigue destruction of the lead wires.

"Failure to follow the above cautions may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used."

## 9.4 Caution (Handling):

Vibration and impact

Do not expose a capacitor or its leads to excessive shock or vibration during use.

"Failure to follow the above cautions may result, worst case, in a short circuit and cause

fuming or partial dispersion when the product is used."

MAISN TEC

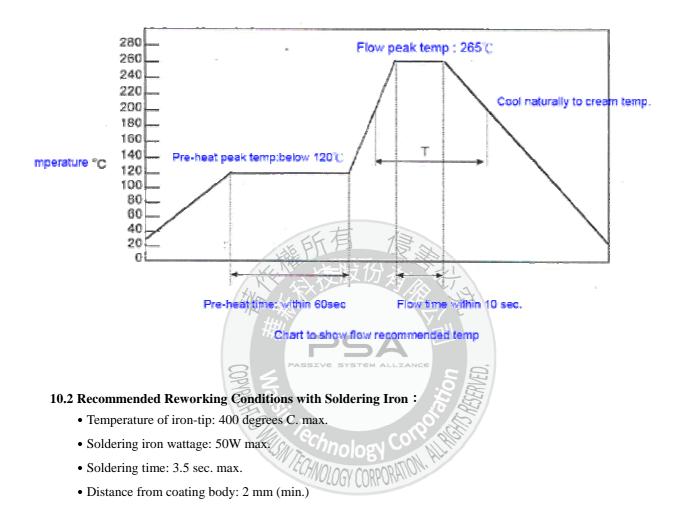

POE-D10-00-E-21

#### **10. Soldering Recommendation:**

#### **10.1 Wave Soldering Profile:**

- Temperature conditions of the flow is recommended as shown in the chart
- Must implement the pre-heat
- Maximum peak flow temperature is recommended  $265^{\circ}C$
- Time "T" implement in the chart recommended within 20 sec. it temperature exceed 200°C
- Take care with the flow solder not to touch the capacitor body directly at mounting

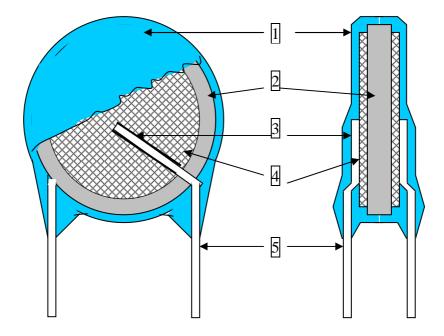

10.3 Reflow-Soldering : Lead Ceramic Cap. should not be soldered by reflow-soldering.
